We met with over 50 investors in Hong Kong last week. In this note we highlight the key areas of investor interest and feedback and try to answer FAQs from the meetings.

Areas of investor interest: all about memory, weak sentiment prior to June-quarter print. After strong share performance in April/May, major Asian memory stocks have fallen 30% since their peak in June to the July 13 close (vs. MXAP/SOX index -6%/-11% as of July 10) due mainly to: i) a growing disconnect between CSP datacenter hardware capex and memory TAM (i.e. sell-side memory TAM expectations moving ahead of CSP's capex projections; ii) Y-Y pricing momentum and secondary delta (q-q pricing momentum) slowing post 2Q26, and iii) lower June quarter EPS print expectations (SEC 2Q26 OP expectations seeing downward revision prior to print last week: *note*). Most investors that we spoke with agree that favorable mid-to-long term memory fundamentals are in place over the next 12-24 months but are worried about crowded positioning and elevated volatility amidst rising ETF product trading activity in the market. We think the nature of investor concern hasn't changed dramatically compared to three months ago when the market had exactly the same debate (*note*). From a broader cycle perspective, we believe we are in a transitional stage from "infrastructure buildout: growth momentum acceleration coupled with beat & raise" to "optimization: growth refinement and earnings durability proof". While we expect CSP datacenter hardware capex spending projections to move up, the degree of upward revision is unclear before the actual results print in (70% the memory sentiment driver at this point, in our view). This is likely to weigh on the memory share sentiment in the short-term before risk-on trade resumes after the CSP result print, and we believe sustainability of earnings durability is the more important share price driver in the midterm. In Asia, we maintain our positive view on major memory makers: **SEC (OW)**, **Kioxia (OW)**, and **Nanya Tech (OW)**.

Demystifying memory industry dynamics and sentiment via answering to FAQ. In this section, we share key FAQs from investors during the meeting. Aside from usual S-D dynamic questions, "LTA" and "HBM pricing" were two key topics during the meetings. Compared to 3M/6M ago, we generally sense more optimism surrounding the LTA concept and witness questions evolving into understanding the LTA in the context of how memory suppliers plan to establish long-term relationships with key customers. Yet, still the majority of investors (more than half) tend to take a cautious view on the LTA concept. On the HBM side, we sense a big gap between our expectations and investors (2x ASP y-y increase next year). Lastly, while investors acknowledge the upside from AI-grade CPU (*memory team view* & *server team view*), we believe the degree of upside is not well understood.

- **How much CSP capex hike should happen to justify memory value TAM?** Our May-2026 published Memory Industry TAM for 2026E-2027E stands at US$348-720bn and this represents 50-70% of CSP hardware capex estimates projected from our U.S. hardware research team. Many investors view the hyperscale players' capex to be underestimated by the market (mainly sell-side consensus) and expect it to move up to US$1trn/US$1.5trn for the respective forecast period in next 3-6M. Capex upward revision is likely to lower the

Jay Kwon AC
(82-2) 758-5725
jay.h.kwon@jpmorgan.com

memory's value share within capex, alleviating the concern on the sustainability trajectory. This was also a large part of the share price trigger in April's result season, in our view. On the other hand, if CSP hardware capex spending hikes move up by a marginal amount, this could be taken negatively to memory suppliers' share sentiment.

- **Where are we in terms of LTA progress? How big is LTA out of the total volume now and will be in the future?** We are beginning to witness an increase in LTA discussion among major memory makers and MU was very vocal in their latest results (*note*) about their LTA structure including duration, pricing, target margin profile, and other variables. It is unclear how big the LTA is out of the total volume for Korean memory makers and comparing the LTA quality is also very challenging at this stage. Therefore, until clear LTA visibility is out and available to the market, we may continue to see headline noise on its impact to ceiling prices and margins. We believe that more than half of the total contract volume will eventually be under LTA and it is important that memory makers will aim for their floor price and margin to be equivalent or above the pre-AI era. We continue to view LTA as a key element for the durability of earnings.
- **Will LTA lead to a slower ASP increase and cap margin improvement?** LTA provides both suppliers and customers a strong bond to secure volume visibility and a certain price range. Especially when the AI hardware capex hike burden remains elevated, it is imperative that the LTA discussion provides greater clarity to both parties. On the other hand, price stabilization is natural and inevitable as both parties will reach an agreement on a certain range of pricing for the next 3-5 years. For the latest LTA contract, it was suggested that the contract pricing is benchmarked using the latest quarter. While we do not disagree on this, we believe upside is still open, as: a) we do not believe all the LTA volume has been secured and, even within key customers, not all the discussed volume is locked up by LTA, implying both parties could strike another LTA heading into 2027E at a higher price, b) we believe there are other elements that provide greater value than price ceilings, such as greater volume visibility or different contract terms ("take or pay", for example), and c) even with an increase in LTA, we anticipate pricing to continue to move up for the non-LTA portion, which will still be pushing up the average pricing toward upside. It remains unclear how LTA translates into actual near-term pricing and margin, which is why we worry about the immediate margin cap. On a mid-to-long term horizon, we would rather focus on over-the-cycle profitability, and this is the strongest counter-argument to some investors' view of memory as cyclical and expectations that prices should correct 50-70% during the down-cycle.
- **Near-term memory pricing outlook and 2027E projection?** We still maintain our ~20%/~10% like-for-like ASP increase expectation for CY3Q26E/4Q26E. Compared to 1-2M ago, we see an increase in the range of pricing expectations among investors (from 15-20% q-q increase to 10-30% q-q increase) as a result of the 2Q26 actual pricing trend, where we saw Korean memory makers' actual DRAM price increase was below that of global peers (MU and NYT May-quarter/June-quarter DRAM ASP trend at low-60%/ high-60% q-q increases). We believe the difference could be explained by 1) base differences (Korean memory makers' March-quarter ASP increase was notably higher vs. US/TW peers) and 2) product mix differences (higher LPDDR sales into mobile customers could result in lower blended ASP increase; server vs. mobile grade price difference is as high as 30-40% per GB). Some investors asked if the LTA mix impact also resulted in price differences, but this remains unclear. Moving into 2027E, we believe a single digit % ASP increase every quarter is still a fair assumption, with half of volume based on LTA using average price point in 2026 contracts and half of volume based on contract pricing, which is likely to reflect the tightening S-D.
- **HBM ASP expectation gap remains wide between us and buyside consensus.**A surprising majority of buyside expectations on HBM pricing for next year were for a 2x y-y increase, and many investors were looking for EPS upward revision from HBM ASP hikes (i.e. HBM ASP per GB needs to rise 2x in order for margin to meaningfully catch

Jay Kwon [AC]
(82-2) 758-5725
jay.h.kwon@jpmorgan.com

up vs. normal DDR5). In our estimates, HBM industry ASP is currently near US$1.8/Gb, which is below that of non-HBM server industry ASP (incl. both DDR5/LPDDR5 solutions) at around $2/Gb; therefore, investors' argument is valid from a purely economic perspective. However, we believe memory makers consider a memory operation's overall profitability when speaking to their major CSP customers (DRAM, NAND, and HBM holistically rather than individual product base) and carefully monitor customers' memory spending appetites. We should bear in mind that HBM is a bundled product with GPU installation in AI server, and CPU-driven demand upside is a secondary order impact to better manage agentic AI. Also, as HBM ASP is negotiated every year (vs. conventional memory facing 3-5 years of multi-year LTA discussions), memory makers can raise ASP the following year. We believe it is imperative to sustain the trade loss ratio concept from HBM to overall DRAM industry S-D and forecast 25-30% like-for-like ASP increases y-y to be in a more reasonable range.

- **Slower HBM4 ramp well understood by the market, higher traction on HBM4E 12Hi.** Given multiple supply chain reports and discussions, the NVDA Vera Rubin rack assembly delay and subsequent HBM4 sourcing plan downward revision is not new to the market and is well understood. Kyber's rack delay speculation (*link*) was a new surprise to the market, but we haven't seen a capacity operation plan revision from the supply chain. (JPMe: 630k wafer allocation to HBM next year out of ~2.3k total DRAM WSPM annually.) Following the Korean memory makers' series of HBM4E 12Hi first customer samplings during 2Q26, investors seem to acknowledge that HBM4E mainstream is likely to be 12Hi instead of 16Hi. In our May-2026 HBM S-D model revisions (*note*), we have reflected 12Hi:16Hi usage in GPU unit mix at 65%:35% for next year, which means that downside from NVDA consumption remains limited for 2027E. Instead, as seen in our CoWoS July-2026 assumption revisions (*note*), we see greater demand from Google TPU and AWS Trainium pipeline, which means that the overall HBM S-D shortage is likely to continue throughout our forecast period. Some investors also pointed out that AI model labs could be a greater part of memory demand drivers as they begin direct sourcing while developing their own custom chips.

- **Where is the bigger shortage between DRAM and NAND?** While both DRAM and NAND are in tight situations, we see a greater shortage in DRAM (self-sufficiency at 50-60%; supply relative to order ratio) over NAND (self-sufficiency at 70-80%). DRAM remains tight despite the increase in the capacity buildout trend (DRAM WSPM annual increase by ~390k every year over 26-29E), and suppliers should see the worsening shortage continuing into next year followed by a continued shortage into 2028E. Compared to DRAM, NAND S-D is less tight and consumer electronics grade demand downward revisions are greater than expected. On the other hand, KV cache offloading grade enterprise SSD demand is seeing exceptionally strong upward revisions, and memory makers are now forecasting 500EB and 2027E y-y growth nearing the +50% range with potential upside risk. Investors think NAND S-D could fare relatively better than the headline risk profile (relatively stronger China NAND competition risk vs. DRAM) and expect a favorable ASP trend for the eSSD segment (leading US CSP customers willing to subsidize eSSD ASP as high as US$0.5-0.55 per GB by end of the year).

- **China competition risk assessment – investors do not yet worry about China supply**. Even after all of the noise (e.g. Apple testing to qualify Chinese memory vendors for a mainland China market version – *link*) and aggressive capacity build out headlines, investors appeared less concerned about China competition. On DRAM, there seems to be little evidence of a meaningful technology gap narrowing versus the leading DRAM producers (frontier players on 1cnm at the moment and scaling down to 1dnm, while the Chinese DRAM competitor is still working through 1znm-1anm). In addition, if the China DRAM supplier allocates greater capacity to HBM for China ecosystem inference chip buildout purposes, this would alleviate its penetration concern (applying the similar

Jay Kwon AC
(82-2) 758-5725
jay.h.kwon@jpmorgan.com

trade loss ratio logic to that of global peers) to the conventional DRAM market, not to mention the overall market is in shortage. In addition, leading Chinese NAND makers are reported to be investing in both DRAM (half of the cleanroom space) and NAND for their new fab next year (*link*) and this is likely to be a positive development for NAND S/D dynamics through 2028E. Overall, despite capex expectations running above market growth for Chinese memory makers, we do not see this as a material downside risk to our memory sector view and investors were generally aligned with this view.

- **Are we seeing any inventory destocking risk?** Typically, a memory down-cycle begins with a surge in memory component inventory across the channel and on customers' balance sheets. Given the prevailing shortage (procurement, installation, and actual consumption trend outpacing the supply increase), we see a decline in major customers' memory inventory (across consumer electronics to server, and B2B side) and little risk of unexpected inventory destocking. As memory consumption cannot exceed the amount of supply (added by inventory), we believe memory procurement eventually needs to be normalized, narrowing the theoretical S-D gap. However, this should not be read as a signal for a potential inventory build-up immediately, as multiple end-demand areas are being disrupted by limited supply. Some segment demand (consumer and automotive applications) could recover quickly when supply improves amid stable pricing trends. Lastly, a few investors also asked if power supply will become a bottleneck and widen the gap between upstream semiconductor and downstream server rack installation in datacenter. Specific lead times and inventory in the supply chain remain unclear, and we would closely monitor finished server rack inventory related risk to memory procurement going forward.
- **Mixed takes on Korea's AI mega-investment plan; more positive bias towards memory SPE from potentially higher capex spending.** Investors generally found the US$3+trn Korean AI mega-investment master plan announcement net-negative to memory sector sentiment as the initial interpretation was focused on lack of supply discipline. We believe there are many moving parts in actual capex execution, and additional fab investment will be necessary on an extremely long-term horizon after Korean memory producers fill in Yong-in fab. It is important to note that supply debottlenecking is necessary to sustain the aforementioned AI capex race while memory sustains adequate value share. From a capex perspective, we believe up to 20% or higher annualized capex could be spent vs. our published forecast, looking at the pace of near-term and mid-to-long term fab construction schedules. MU's US$50bn additional capex plan (*link*) on top of its previous US$200bn spending echoes a similar view and news reports (*link*) on Samsung potentially pulling in Yong-in fab infrastructure for up to two years is a clear indication of memory makers' fab first strategy to obtain flexibility in preparing new supply and the capacity to respond to its multi-year shortage view.
- **Where else do we see bottlenecks in the memory supply chain?** Within the memory sub-components industry, we currently see an increase in the shortage of memory-grade substrate and PCB (both at DRAM/NAND) and controller IC as well as DDR4 (mainly for NAND). This is a result of the broadening range of different memory specs required by key customers (demanding various SKUs instead of of only high density SKU). While memory makers' overall TAM (GB terms) is unchanged, the increase in module SKUs (higher number of DRAM modules or SSD modules) will result in greater sourcing needs for respective components. Therefore, we consider market speculation on memory-grade substrate price cuts (*link*) as unrealistic and view the ongoing BT substrate (FC-CSP) migration/conversion to ABF substrate (*JPM Asia Tech research view*) as a tailwind to S-D improvement. The aforementioned trend is also favorable to third party NAND controller IC solution providers and DDR4 solution providers, in our view. Lastly, a few investors asked if we are seeing S/D tightness in the silicon wafer sector as well (little evidence of substantial S-D dynamic improvement in the next 6-9M, according to our discussions with memory suppliers).

Jay Kwon AC
(82-2) 758-5725
jay.h.kwon@jpmorgan.com

- **MLCC received the second most attention outside of memory, followed by ABF substrate, with relatively less interest in RV ideas than in the past**. Most investors understand the similarities between memory and MLCC cycles (both following S-D with AI being the new demand driver) but continue to underestimate the supply bottlenecks (increase in different needs of AI server grade MLCC at low yield and trade loss due to larger form-factor SKU production). Our bullish MLCC sector thesis (*note*) is based on 1) structural product mix improvement driven by AI server related demand strength and 2) S-D tightness resulting in broad-based MLCC ASP strength for non-AI products. Another area of investor pushback was on potentially much weaker-than-expected IT MLCC demand (due mainly to component price hikes driven by production cutbacks), which could push back the point of shortage. In terms of key catalysts, investors are waiting for clear signals of price hikes to justify demanding valuations (e.g. SEMCO is trading at 18x FY28E to JPM EPS or 14x to bullish investor EPS expectations above W90k). It remains unclear if leading MLCC producers (**Murata**/**Taiyo Yuden** – both OW, covered by Akinori Kanemoto, and **SEMCO**) will provide a clear path to a price hike in the upcoming July result season. This is a key reason why MLCC stocks saw a big selloff (three suppliers collectively down 34% since the peak in June vs. TPX/Kospi -2%/-25%) alongside weak memory stock sentiment, in our view. Substrate sector thesis is unchanged (higher layer migration towards AI applications and S/D tightness potentially extending beyond 2028E); however, we are witnessing similar risk-off sentiment to that of MLCC on followers such as **LGIT**. Overall interest levels in LGE were low, but a few investors pointed out the 2Q26 headline print and the expectation reset post robotics-related sentiment cooldown could put the stock in a relatively safe spot vs. the memory sector. Lastly, interest in overall **relative value trade ideas** in Korea has edged down vs. 3M ago as an increasingly large portion of NAV is now correlated to that of the memory semi stock share price trend (e.g. **SK Inc**, **Samsung C&T**, **SK Square** [not covered], and others). We expect the sector interest to return once shareholder return visibility becomes more clear on underlying assets, and risk-on trade sentiment returns post major CSP customers' datacenter hardware capex spending hike announcements.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to KIOXIA Holdings (285A), Murata Manufacturing (6981), Nanya Technology, Samsung Electro-Mechanics, Samsung Electronics, Taiyo Yuden (6976) or related entities.
- **Manager or Co-manager:** J.P. Morgan acted as manager or co-manager in a public offering of securities or financial instruments (as such term is defined in Directive 2014/65/EU) of/for Samsung Electronics or related entities within the past 12 months.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of KIOXIA Holdings (285A), Samsung Electro-Mechanics, Samsung Electronics, Taiyo Yuden (6976) or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: KIOXIA Holdings (285A), Murata Manufacturing (6981), Nanya Technology, Samsung Electro-Mechanics, Samsung Electronics, Taiyo Yuden (6976) or related entities.
- **Client/Investment Banking:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as investment banking clients: Samsung Electronics or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: Murata Manufacturing (6981), Samsung Electro-Mechanics, Samsung Electronics, Taiyo Yuden (6976) or related entities.

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Sep 24, 2001. All share prices are as of market close on the previous business day.
Break in coverage Jul 04, 2024 - Jul 22, 2025.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://.

Coverage Universe: Kwon, Jay : LG Corp (003550.KS), LG Display (034220.KS), LG Electronics (066570.KS), LG Innotek (011070.KS), Nanya Technology (2408.TW), SK Inc (034730.KS), SK hynix (000660.KS), SKC (011790.KS), Samsung C&T (028260.KS), Samsung Electro-Mechanics (009150.KS), Samsung Electronics (005930.KS), Samsung SDS (018260.KS)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	**Neutral** (hold)	**Underweight** (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http:// where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

Morgan Securities (Taiwan) Limited produces research materials on securities not listed on the Taiwan Stock Exchange or Taipei Exchange (“Non-Taiwan Listed Securities”), these materials shall not constitute securities recommendations for the purpose of applicable Taiwan regulations, and, for the avoidance of doubt, J.P. Morgan Securities (Taiwan) Limited does not act as broker for Non-Taiwan Listed Securities.** According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material that may give rise to conflicts of interests, unless otherwise disclosed in the “Important Disclosures” in this material.

Thailand: This material is issued and distributed in Thailand by JPMorgan Securities (Thailand) Ltd., which is a member of the Stock Exchange of Thailand and is regulated by the Ministry of Finance and the Securities and Exchange Commission. The registered address is 548 One City Center Building, 50th Floor, Ploenchit Road, Lumphini, Pathum Wan, Bangkok 10330.

UK: Research is produced in the UK by J.P. Morgan Securities plc (“JPMS plc”) which is a member of the London Stock Exchange and is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or J.P. Morgan Markets Limited (“JPMML Ltd”) which is authorised and regulated by the Financial Conduct Authority. Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 (“the FPO”); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as "UK relevant persons". This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons.

A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution, or use of the information contained herein (including any reliance thereon) is STRICTLY PROHIBITED. Although this transmission and any attachments are believed to be free of any virus or other defect that might affect any computer system into which it is received and opened, it is the responsibility of the recipient to ensure that it is virus free and no responsibility is accepted by JPMorgan Chase & Co., its subsidiaries and affiliates, as applicable, for any loss or damage arising in any way from its use. If you received this transmission in error, please immediately contact the sender and destroy the material in its entirety, whether in electronic or hard copy format.
