AZN (O): non-oncology upside surprise - why's our thesis now been strengthened?

Despite the promising non-oncology phase 3 data since 3Q25, our channel checks indicate that this business still doesn't command its fair share of the debate. This is intriguing as non-oncology drives 65% of our group sales CAGR (26-31e) of 8% and all the top-line upside. Ourthesis is now strengthened post a deep dive into the $20bn peak market for drugs which stop proteins strangling the heart (ATTR-CM). Our new 2036e AZN ATTR of $10bn (up 60%) implies 10% upside to the consensus (Bloomberg) group sales. We expect positive 'CardioTTRansform' phase 3 data for AZN's Wainua in 2H26 to unlock this upside.

What's changed? Our deep dive into the $20bn potential market for drugs which stop protein 'strangling' of the heart (ATTR-CM). Post expert calls we now expect AZN to lead here for four reasons **A/** AZN is the only company with all three validated drug mechanisms of action (doctors think combination therapy is the most effective approach) **B/** precedents strongly suggest that AZN's entrance should materially expand the market **C/** AZN's investment power means that physician awareness of Wainua is already high **D/** the landmark CardioTTRansform trial should be the most competitive dataset. We thus upgrade our AZN ATTR 2036e franchise by 60% to $10bn within which we now expect Wainua to become AZN's 2nd largest non-oncology drug.

What's the risk-reward? We calculate the impact on 2035e EBIT (= DCF proxy). In our bull case we derive 167% upside vs 97% bear case downside. The approved drugs account for 90% of the upside and 51% of the downside with top 3 contributors Ultomiris (Rare Diseases), Wainua & Enhertu (cancer). In the pipeline the top 3 variances are Baxfendy (blood pressure, kidney disease), camizestrant (breast cancer) and volrustomig (lung cancer).

Investment Implications

How do we calculate our Price Target? Still the average of DCF (£156 (+5%); 8% WACC & 2.5% perpetuity growth; both unchanged) and EV/EBITA (£223 (-1%); 60% premium to EU peers retained). Our PT rises 2% to £189 due to our ATTTR upgrades. Considering AZN's leading R&D engine, our PT implies an adj PE30e of 15x for a 40% premium to EU peers. We also think AZN looks cheap on 5-year forward sales regression vs global peers.

EXECUTIVE SUMMARY - WHY SHOULD AZN LEAD IN A $20BN PEAK NON-ONCOLOGY MARKET?

Transthyretin amyloidosis (ATTR) is a disease where mis-folded proteins accumulate to cause life-threatening organ failure, most seriously in the heart (cardiomyopathy (ATTR-CM); ca 800k sufferers in the G8). Disease modifying treatments (unlike most drugs which alleviate symptoms) include stabilisers and more importantly gene silencers like Amvuttra (consensus peak $9Bn) developed by Alnylam (Pickering; O)**. But mortality rates in ATTR-CM still mirror those in severe cancers, with US diagnosis rates of just 25%.**

In 2H26 AZN will release the landmark phase III study (cardioTTRansform) for its silencer Wainua (peak guidance > $5Bn vs peak consensus of $2Bn). In our view, strong results would secure best in class status and make Wainua AZN's second largest non-oncology drug. We also prosecute AZN's other promising ATTR-CM phase 3 drug (cliramitug; peak guidance $3-5Bn vs consensus of $2Bn) which has a new mechanism of action (depleter) and is first-in-class. Depleters uniquely remove the ATTR plaques which cause the debilitating symptoms in the heart.

Why do we expect AstraZeneca to win in the $20bn peak ATTR market (which offers a 10% CAGR to (26-36e))?

We believe that Wainua & cliramitug, plus AZN's commercialization of stabiliser Attruby in Japan (BridgeBio (Pickering;O), global peak sales $4Bn) makes it **the only company with a complete portfolio of ATTR drugs.** Key Opinion Leaders (KOLs) have emphasized to us that a combination drug approach will yield the best results. In addition, post our channel checks with experts, we understand that AZN's Alexion Rare Disease legacy is an important competitive advantage in ATTR-CM.

Via thorough new bottom-up patient based modeling, corroborated by top-down US prescription data, **we increased our 2036e risk adjusted base case Wainua and cliramitug forecasts by 20% and 4x to $6.2Bn and $3.3Bn respectively** (Exhibit 1; Exhibit 2). Considering Rare Disease precedents, we also now expect greater market expansion in ATTR. Our newfound enthusiasm for the depleter mechanism also means that we now expect AZN to capture more share in ATTR (Exhibit 3) and price cliramitug much higher. We also now think silencers are far tougher to 'generic copycat' due to higher barriers.

If the landmark phase 3 CardioTTRansform study proves that Wainua is more effective in silencer pre-treated patients it will take more share from Amvuttra, which lacks this data. In this bull case, our 2036e global Wainua forecast would increase by 37% to $8.5bn for a 34% market share. This compares to a base case of 31% - 25% of US patients are currently diagnosed.

EXHIBIT 4: **Bernstein global sales forecast like for like ($m)**

Our upgraded Wainua sales forecasts (Exhibit 1; Exhibit 2) now reasonably imply a ramp up in line with Amvuttra (Exhibit 4). We acknowledge that Alnylam could deliver a step-change in convenience via the launch of its twice yearly 'next gen' silencer nucresiran in the early 2030s. Nonetheless, we believe that AZN will lead long term due to its portfolio approach and better data (4 point MACE endpoint in cardioTTRansform vs 3 point MACE endpoint for nucresiran in the TRITON phase 3).

Unlike Amvuttra, if nucresiran is approved no royalties would be payable by Alnylam to Sanofi (O). Hence, we think Alnylam's best path to maximize shareholder value is to drive the sales of nucresiran at the expense of Amvuttra (Exhibit 4). But consensus is assuming that the sales of nucresiran will be entirely supplemental to Amvuttra. We think this is unlikely, hence we expect intra-Alnylam cannibalization (Exhibit 5).

VALUATION - WHY IS OUR AZN PT INCREASING?

Our price targets in EU pharma are always a simple average of EV/EBITA valuation & DCF (which applies the perpetuity value at year 21 post a first decade of bottom up forecasts and a second decade projected with 'fade' assumptions). Our DCF also continues to assume a WACC of 8%, and perpetuity growth after 2045 of 2.5%. We believe that this approach appropriately balances the short and long term.

Considering the upgrades to our Wainua and cliramitug forecasts described above, our DCF valuation is increasing to £156/share versus £148/share previously (Exhibit 7). Considering that the majority of the upside of our new ATTR-CM estimates manifests after 2028, our 2026-2028e EV/EBITA valuation is largely unchanged (Exhibit 11).

EXHIBIT 7: **AstraZeneca Price Target calculation (£)**

	Old	New	% change	Assumptions
EV/EBITA	224	223	-1%	Premium to the EU pharma average 60% due to AZN's sustainable, premium growth
DCF	148	156	5%	WACC 8%, fade (2036-2045) and perpetuity growth 2.5% as guidance implies 8% CAGR (23-30e)
Average (ie price target)	186	189	2%	
Target PE26 ('core')	23.7x	24.1x	2%	
Sector PE26 ('core')	15.2x	15.0x	-1%	

Source: Bernstein analysis & estimates

Our new price target (PT) is now £189/share compared to our previous valuation of £186/share, for a 5% increase. Our new price target implies an adjusted PE26 of 25x for a 60% premium to peers (Exhibit 9), which we believe is robust considering AZN's best in class R&D engine and leading commercial execution and capital allocation. In 2030 our new PT implies an adjusted PE of 15x, for a 40% premium to EU (Exhibit 9). At its current forward valuation, AstraZeneca's prospective PE is just slightly ahead of its 15 year average (Exhibit 8).

But we strongly believe that AZN looks cheap on 5-year forward sales regression vs global peers (Exhibit 10).
