CITI'S TAKE

Reporting season for precious miners will kick off on 17 July and we expect production performance to be sequentially better on lower base (1Q is generally weaker seasonally). However, production performance could look somewhat mixed on a YoY basis for these companies. Overall, we expect the quarterly production trends to closely track the full-year guidance across the coverage. Market will likely focus on outlook commentary to gauge, among other factors: 1) cost performance in the June quarter (impact of higher crude oil prices); 2) production performance at some of the mines e.g., Mogalkewna (1Q was weaker on maintenance being brought forward), Styldrfit, and Eland (both ramping up), IMP's Canadian ops (whether production will exceed guidance), and the Keliber lithium project; and 4) inventory release (IMP/NPH). We have also updated our model to incorporate the latest commodity prices and revisited our assumptions, resulting in TPs but unchanged ratings.

VAL: 2Q26 production preview – we expect stronger production performance QoQ on lower base — VAL reports on 17 July. Total production is likely to increase by 10% QoQ while mined production is likely to increase by 16%. The increase is primarily due to a lower base as 1Q was negatively impacted by seasonality. YoY we expect mined production to increase by 22% primarily due to higher production at Amandelbult (2Q25 was negatively impacted by rainfall-led operational issues). Refined production is expected to increase by 17% QoQ to as (1) 1Q refined production run rate was lower than what the annual guidance suggests (lower base), and (2) VAL plans annual stock counts and planned maintenance in 3Q that could result in lower refined production in the September quarter and higher-than-normal production levels during 2Q/4Q.

IMP: FY26 prod preview – saleable production likely to be flat YoY and towards the upper end of guidance — We expect group saleable production to remain flat (but towards the upper end of the guidance) at c.3.49moz as higher production from the Rustenburg and Zimplats operations are likely to be offset by lower production from Canadian ops Mimosa and Marula mines. Refined production is likely to increase by c.5% YoY within the guidance. QoQ we expect 4Q FY26 production to increase by 11% on lower base (lower matte prod at Zimplats and in general weak March quarter).

SSW: 2Q FY26 prod preview – expecting stronger production performance QoQ — South African PGMs and gold production are likely to increase QoQ on a lower base as the March quarter is generally weaker. US PGM production is also likely to be stronger but in line with the annual guidance.

GFI: 2Q FY26 production preview – expecting stronger production performance YoY — Gold production is likely to increase by 7% YoY on (1) Salares Norte ramp up and (2) accounting for 100% of Gruyere mine production vs 50% in the previous comparable period. This is likely to be offset by lower production from the Damang mine (lease expiry). QoQ production is likely to marginally decline. For 1H FY26, production is likely to be 11% higher YoY.

See Appendix A-1 for Analyst Certification, Important Disclosures and Research Analyst Affiliations.

Anglogold Ashanti PLC (AU.N)

Buy | TP **US$125.00** from US$130.00 | Price US$79.76 (13 Jul 26 16:00)

Maintain Buy with TP marginally reduced to US$125 — We update our model by incorporating the latest commodity prices (link, resulting in -5%/0%/0% changes to gold price estimates for CY26/27/28e), marking to market FX and revisiting our operational assumptions. The net result is -8%/0%/0% changes to our FY26/27/28 EBITDA estimates. We reduce our TP to US$125 (from US$130) primarily driven by lower gold price estimates. At our TP, AU offers c.60% ETR, and we maintain Buy rating on the stock.

Anglogold Ashanti PLC (ANGJ.J)

Buy | TP **R2,040.00** from R2,100.00 | Price R1,315.35 (13 Jul 26 17:00)

Maintain Buy with TP marginally reduced to ZAR 2,040 — We update our model by incorporating the latest commodity prices (link, resulting in -5%/0%/0% changes to gold price estimates for CY26/27/28e), marking to market FX and revisiting our operational assumptions. The net result is -8%/0%/0% changes to our FY26/27/28 EBITDA estimates. We reduce our TP to ZAR 2,040 (from ZAR 2,100) primarily driven by lower gold price estimates. At our TP, ANG offers c.60% ETR, and we maintain Buy rating on the stock.

Gold Fields Ltd (GFI.N)

Buy | TP **US$57.00** from US$58.00 | Price US$33.53 (13 Jul 26 16:00)

Maintain Buy with TP marginally reduced to US$57 — We update our model by incorporating the latest commodity prices (link, resulting in -5%/0%/0% changes to gold price estimates for CY26/27/28e), marking to market FX and revisiting our operational assumptions. The net result is -7%/0%/0% changes to our FY26/27/28 EBITDA estimates. We reduce our TP to US$57 (from US$58) primarily driven by lower gold price estimates. At our TP, GFI offers c.70% ETR, and we maintain Buy rating on the stock.

Gold Fields Ltd (GFIJ.J)

Buy | TP **R930.00** from R950.00 | Price R554.94 (13 Jul 26 17:00)

2Q FY26 production preview – expecting stronger production performance YoY — Gold Fields will provide a production update along with the trading update. Gold production is likely to increase by 7% YoY on (1) the Salares Norte ramp up and (2) accounting for 100% of Gruyere mine production vs 50% in the previous comparable period. This is likely to be offset by lower production from the Damang mine (lease expiry). QoQ production is likely to marginally decline. Overall, production is likely to remain within the guidance, and we do not expect any material changes to the full-year production guidance at this stage. For 1H FY26, production is likely to be 11% higher YoY.

Maintain Buy with TP marginally reduced to ZAR 930 — We update our model by incorporating the latest commodity prices (link, resulting in -5%/0%/0% changes to gold price estimates for CY26/27/28e), marking to market FX and revisiting our operational assumptions. The net result is -7%/0%/0% changes to our FY26/27/28 EBITDA estimates. We reduce our TP to ZAR 930 (from ZAR 950) primarily driven by lower gold price estimates. At our TP, GFI offers c.70% ETR, and we maintain Buy rating on the stock.

Impala Platinum (IMPJ.J)

Buy | TP **R250.00** from R360.00 | Price R182.60 (13 Jul 26 17:00)

FY26 production preview – group saleable production likely to be flat YoY and towards the upper end of guidance — Impala will report FY26 production along with the trading update. We expect group saleable production to remain flat (but towards the upper end of the guidance) at c.3.49moz as higher production from Rustenburg and Zimplats ops are likely to be offset by lower production from Canadian ops Mimosa and Marula mines. Refined production is likely to increase by c.5% YoY within the guidance. QoQ we expect 4Q FY26 production to increase by 11% on a lower base (lower matte prod at Zimplats and in general a weak March quarter).

Maintain Buy with TP reduced to ZAR 250 — We update our model by incorporating the latest commodity prices (link), marking to market Ruthenium/Iridium prices and revisiting our operational assumptions. The net result is +6%/-6%/-6% changes to our FY26/27/28 EBITDA estimates. FY26 EBITDA is positively impacted by marking to market higher Ruthenium/Iridium prices. We also lower our valuation multiple for the company to 3.5x (vs 7.0x before). We view this to be appropriate as IMP has traded near this multiple during higher-for-longer PGM price environments. We reduce our TP to ZAR 250 (from ZAR 360) primarily driven by lower multiples used and marginally lower rand basket price estimates medium term. At our TP, IMP offers c50% ETR, and we maintain Buy rating on the stock.

Figure 3. Impala FY26 production preview

IMP - FY26	Unit	FY25 A	FY26 E	Annual guidance/trading update*	% Y/Y

Source: Citi Research, Company Reports

Northam Platinum Holdings LTD (NPHJ.J)

Buy | TP **R290.00** from R420.00 | Price R236.79 (13 Jul 26 17:00)

Maintain Buy with TP reduced to ZAR290 — We update our model by incorporating the latest commodity prices (link), marking to market Ruthenium/Iridium prices, the latest operating update (link), and revisiting our operational assumptions. The net result is +6%/+2%/-5% changes to our FY26/27/28 EBITDA estimates. FY26 EBITDA is positively impacted by marking to market higher Ruthenium/Iridium prices. We also lower our valuation multiple for the company to 5.0x (vs 9.0x before). We view this to be appropriate as NPH has traded near this multiple during higher-for-longer PGM price environments. We reduce our TP to ZAR 290 (from ZAR 420) primarily driven by lower multiples used and marginally lower rand basket price estimates medium term. At our TP, NPH offers over 30% ETR, and we maintain Buy rating on the stock.

Sibanye Stillwater Ltd (SSWJ.J)

Neutral | TP **R37.00** from R57.00 | Price R34.45 (13 Jul 26 17:00)

2Q FY26 production preview – expecting stronger production performance QoQ — Sibanye will provide production update along with the trading update. South African PGMs and gold production are likely to increase QoQ on a lower base as the March quarter is generally weaker. US PGM production is also likely to be stronger but in line with the annual guidance. Overall, production is likely to remain within the guidance, and we do not expect any material changes to the full-year guidance at this stage. For 1H FY26, production from SA/US PGM ops are likely to remain flat and within the guidance, while production from SA gold ops is likely to be -5% lower YoY.

Maintain Neutral with TP reduced to ZAR37 — We update our model by incorporating the latest commodity prices (link) and company guidance during CMD (higher production and capex, link), and revisiting our operational assumptions. The net result is -2%/+10%/+39% changes to our FY26/27/28 EBITDA estimates. FY28 EBITDA is positively impacted by higher production estimates from SA PGM/gold ops (link). We also lower our valuation multiple for the company to 2.2x (vs 3.6x before). We view this to be appropriate as SSW has traded near this multiple during higher-for-longer PGM price environments. We reduce our TP to ZAR37 (from ZAR57) primarily driven by lower multiples used and lower gold price and lower rand basket price estimates. At our TP, SSW offers over c.13% ETR, and we maintain Neutral rating on the stock.

Valterra Platinum Ltd (VALJ.J)

Neutral | TP **R1,150.00** from R1,600.00 | Price R1,082.21 (13 Jul 26 17:00)

2Q26 production preview – we expect stronger production performance QoQ on lower base — VAL reports on 17 July. Total production is likely to increase by 10% QoQ while mined production is likely to increase by 16%. The increase is primarily due to a lower base as 1Q was negatively impacted by seasonality. YoY we expect mined production to increase by 22% primarily due to higher production at Amandelbult (2Q25 was negatively impacted by rainfall-led operational issues). Refined production is expected to increase by 17% QoQ as (1) the 1Q refined production run rate was lower than what the annual guidance suggests (lower base), and (2) VAL plans annual stock counts and has planned maintenance in 3Q, which will likely result in lower refined production in the September quarter and higher-than-normal production levels during 2Q/4Q.

Maintain Neutral with TP reduced to ZAR 1,150 — We update our model by incorporating the latest commodity prices (link), marking to market Ruthenium/Iridium prices and revisiting our operational assumptions. The net result is +5%/-4%/-1% changes to our FY26/27/28 EBITDA estimates. FY26 EBITDA is positively impacted by marking to market higher Ruthenium/Iridium prices. We also lower our valuation multiple for the company to 5.0x (vs 8.5x before). We view this to be appropriate as VAL has traded near this multiple during higher-for-longer PGM price environments. We reduce our TP to ZAR 1,150 (from ZAR 1,600) primarily driven by lower multiples used and marginally lower rand basket price estimates medium term. At our TP, VAL offers over c.10% ETR, and we maintain Neutral rating on the stock.

Figure 6. Valterra - 2Q'FY26 Production Preview

Adding Downside 30-Day Short-Term View on Gold Fields Ltd (GFI.N)

Direction: **Downside**
Duration: Within 30 Days
Category: Earnings

Higher consumables and energy costs (due to higher crude oil prices) could lead to 1H26 costs ahead of the guidance and are negative for the company, in our view.

Adding Downside 30-Day Short-Term View on Gold Fields Ltd (GFIJ.J)

Direction: **Downside**
Duration: Within 30 Days
Category: Earnings

Higher consumables and energy costs (due to higher crude oil prices) could lead to 1H26 costs ahead of the guidance and are negative for the company, in our view.

Adding Upside 30-Day Short-Term View on Impala Platinum (IMPJ.J)

Direction: **Upside**
Duration: Within 30 Days
Category: Earnings

Impala Platinum is sitting at excess PGM stocks and previously guided to reduce the stock to c.320koz by end-June. It had achieved this by end-March. Any further release in inventory in the June quarter against a higher PGM price environment should be positive for the earnings/cash flow, in our view.

Adding Upside 30-Day Short-Term View on Valterra Platinum Ltd (VALJ.J)

Direction: **Upside**
Duration: Within 30 Days
Category: Earnings

VAL plans annual stock counts and has planned maintenance in 3Q that will likely result in lower refined production in the September quarter and higher-than-normal refined production levels during 2Q/4Q. For context, 1Q refined production was also lower than the annual run rate. Higher refined production and sales in 2Q against a higher PGM price environment should be positive for the earnings/cash flow, in our view.

Anglogold Ashanti PLC

Company description

AngloGold is the sixth-largest gold producer in the world (and the fourth-largest listed) with a diversified asset base. Currently, it owns 11 producing assets located across the globe and is in the process of developing the North Bullfrog project in Nevada, USA. In 2024, c.60% of production came from Africa, c.20% from Australia, and c.20% from Americas. In 2025, the company is expected to produce c.3.1mn oz of gold.

Investment strategy

We rate AngloGold a Buy. The company accounts for only 2% of gold production (top 10 gold producers account for around 28% of gold production, on our calculations) and appears well placed to benefit from the scarcity of large listed gold miners in a rising gold price environment. With increased production from Sukari and longer-term expansion in Nevada starting with North Bullfrog as a platform for growth in the Beatty district, the AISC profile should improve, and the jurisdictional risk (c.65% of production and c.75% of NAV currently from Africa) should reduce. There is also organic growth potential led by the ramp-ups of the Obuasi mine and the North Bullfrog project.

Valuation

Our target price of $125/share is based on the average of a DCF-based NPV valuation and an EV/EBITDA valuation. Our DCF analysis uses a weighted average cost of capital (WACC) of 5% for gold mining operations. Our NPV is calculated based on real long-term equilibrium commodity prices. We believe this is appropriate given the volatility of the cash flows through the cycle and project capex, which at times can be front-loaded. For EV/EBITDA, we use a multiple of c.7x on 1-year forward EBITDA.

Risks

We identify the downside risks to our investment case and TPs for AngloGold as below:

General sector-wide risk

Commodity prices: Revenue is largely dependent on gold prices, so a key risk to our forecast would be adverse changes to its price. Furthermore, as a relatively high-cost producer, margins have less space to fall. Labor relations: Labor disputes are endemic in the mining industry and could negatively impact volumes and costs.

Company-specific risks

Capex overrun: ANG is in the process of developing its Nevada projects and Obuasi ramp up. If the capex/cost estimates come in higher than our estimates (which are based on a feasibility study), our NPV and TP might be negatively impacted. Depleting reserves: Out of 11 assets, seven have a life of mine of less than eight years (based on reserves and FY24 production only). We have assumed that some portion of resources will be converted into reserves in the medium to longer term, which would increase life of mine of some of these assets (based on historical trends). If the company fails to do so or incurs more capex than our estimates, TP/NPV will be negatively impacted. Regulatory Risks: About 65% of production comes from African countries, which have relatively higher regulatory risks (vs countries such as Australia/US). Furthermore, the federal and Nevada permitting processes are underway for the North Bullfrog project in the US. Further delay in Obuasi mine (Phase 3) ramp-up: ANG encountered difficult ground conditions in high-grade areas during 2024, thus delaying phase 3 by nine months. This resulted in the company adopting a hybrid mining approach in 2024: sub-level open stopes (SLOS) in lower-grade areas and UHDF in higher-grade areas. Any issues/delays in implementing these new approaches will likely be negative for our TP. Cost escalation: We are expecting broadly flat AISC over the next 3–4 years due to low-cost incremental production (Sukari and North Bullfrog project). Cost escalation beyond our expectations is negative for our TP/NPV.

Anglogold Ashanti PLC

Company description

AngloGold is the sixth-largest gold producer in the world (and the fourth-largest listed) with a diversified asset base. Currently, it owns 11 producing assets located across the globe and is in the process of developing the North Bullfrog project in Nevada, USA. With increased production from Sukari and longer-term expansion in Nevada starting with North Bullfrog as a platform for growth in the Beatty district, the AISC profile should improve, and the jurisdictional risk (c.65% of production and c.75% of NAV currently from Africa) should reduce. There is also organic growth potential led by the ramp-ups of the Obuasi mine and the North Bullfrog project.

Valuation

Our target price of ZAR 2,040/share is based on an average of a DCF-based NPV valuation and an EV/EBITDA valuation. Our DCF analysis uses a weighted average cost of capital (WACC) of 5% for gold mining operations. Our NPV is calculated based on real long-term equilibrium commodity prices. We believe this is appropriate given the volatility of cash flows through the cycle and project capex, which at times can be front-loaded. For EV/EBITDA, we use a multiple of c.7x on 1-year forward EBITDA.

Risks

We identify the downside risks to our investment case and TPs for AngloGold as below:

General sector-wide risk

Commodity prices: Revenue is largely dependent on gold prices, so a key risk to our forecast would be adverse changes to its price. Furthermore, as a relatively high-cost producer, margins have less space to fall. Labor relations: Labor disputes are endemic in the mining industry and could negatively impact volumes and costs.

Company-specific risks

Capex overrun: ANG is in the process of developing its Nevada projects and Obuasi ramp up. If the capex/cost estimates come in higher than our estimates (which are based on a feasibility study), our NPV and TP might be negatively impacted. Depleting reserves: Out of 11 assets, seven have a life of mine of less than eight years (based on reserves and FY24 production only). We have assumed that some portion of resources will be converted into reserves in the medium to longer term, which would increase life of mine of some of these assets (based on historical trends). If the company fails to do so or incurs more capex than our estimates, TP/NPV will be negatively impacted. Regulatory Risks: About 65% of production comes from African countries, which have relatively higher regulatory risks (vs countries such as Australia/US). Furthermore, the federal and Nevada permitting processes are underway for the North Bullfrog project in the US. Further delay in Obuasi mine (Phase 3) ramp-up: ANG encountered difficult ground conditions in high-grade areas during 2024, thus delaying phase 3 by nine months. This resulted in the company adopting a hybrid mining approach in 2024: sub-level open stopes (SLOS) in lower-grade areas and UHDF in higher-grade areas. Any issues/delays in implementing these new approaches will likely be negative for our TP. Cost escalation: We are expecting broadly flat AISC over the next 3–4 years due to low-cost incremental production (Sukari and North Bullfrog project). Cost escalation beyond our expectations is negative for our TP/NPV

Gold Fields Ltd

Company description

Gold Fields is the 8th largest gold producer in the world (and the 6th largest listed) with a diversified asset base. Currently, it owns 10 assets (both producing and project) which are located across the world. In 2024, 46% of production came from Australia, 31% from West Africa, 12% from South Africa and 11% from South America. In 2024, the company produced c2.4mn oz of gold at an AISC of $1,612/oz.

Investment strategy

We rate Gold Fields as Buy. The company accounts for only 2% of gold production (top-10 gold producers around 28% of gold production on our calculations) and is well placed to benefit from the scarcity of large listed gold miners in rising gold price environment. With production relatively balanced across four continents (Australia, Africa and Americas), the risk from adverse jurisdictional/geopolitical events is diversified. Gold Field's production likely to increase by c25% by '26e and 30% by '29e vs '24. This growth is enabled by the ramp-up of Salares Norte, the Windfall project and the acquisition of Gold Road Resources. The incremental production is expected to be at lower costs. We believe GFI should trade at higher multiples due to (i) well capitalized assets now which means unlike the previous gold bull cycles, benefits of higher gold prices should lead to higher FCF generation rather than increase in capex, (ii) GFI is trading at discount to the global peers despite production growth over the next five years.

Valuation

Our target price of $57/share for Gold Fields is based on average of DCF-based NPV valuation and EV/EBITDA valuation. Our DCF analysis uses a Weighted Average Cost of Capital (WACC) of 5% for gold mining operations. Our NPV is calculated based on real long-term equilibrium commodity prices. We believe this is appropriate volatility of the cash flows through the cycle and project capex, which at times can be front loaded. For EV/EBITDA, we use a multiple of c6x on 1 yr fwd EBITDA.

Risks

We identify the following downside risks to our investment thesis and TP:

General sector-wide risk
Commodity prices: Revenue is largely dependent on gold prices so a key risk to our forecast is adverse changes to its price. Furthermore, as a relatively high-cost producer, margins have less space to fall.
Labour relations: Labour disputes are endemic in the mining industry and could negatively impact volumes and costs.

Company-specific risks
Capex over run: GFI is currently in the process of developing Windfall projectand is currently in the process of getting environmental approval. Company will provide updated details and project economics most likely in 2026. If the capex/cost estimates come higher than our estimates (which is based on feasibility study), our NPV and PT might be negatively impacted.
Higher debt levels: a steep decline in the gold prices might result in higher for longer net debt levels.
Project delays: Further delay in ramp of Salares Norte mine could result in higher costs and negatively impact our estimates.
Regulatory risks: c45% of production comes from African countries which have relatively higher regulatory risks (vs. countries such as Australia and in South America).

Gold Fields Ltd

Company description

Gold Fields is the 8th largest gold producer in the world (and the 6th largest listed) with a diversified asset base. Currently, it owns 10 assets (both producing and project) which are located across the world. In 2024, 46% of production came from Australia, 31% from West Africa, 12% from South Africa and 11% from South America. In 2024, the company produced c2.4mn oz of gold at an AISC of $1,612/oz.

Investment strategy

We rate Gold Fields as Buy. Capex over run: GFI is currently in the process of developing Windfall project

and is currently in the process of getting environmental approval. Company will provide updated details and project economics most likely in 2026. If the capex/cost estimates come higher than our estimates (which is based on feasibility study), our NPV and PT might be negatively impacted.
Higher debt levels: a steep decline in the gold prices might result in higher for longer net debt levels.
Project delays: Further delay in ramp of Salares Norte mine could result in higher costs and negatively impact our estimates.
Regulatory risks: c45% of production comes from African countries which have relatively higher regulatory risks (vs. countries such as Australia and in South America).

Impala Platinum

Company description

Impala Platinum (IMP) is one of the world's largest PGM producers and accounts for c20% of global refined PGM production. The company is based primarily in South Africa, from which it currently sources ~65% of its production (concentrate); ~25% is sourced from its operations in Zimbabwe and the rest from Canada. In the longer term, Zimbabwe offers strategic low-cost growth potential for IMP.

Investment strategy

We rate the stock Buy. We see potential for a rerating once the benefit of the RBP acquisition (through synergies) starts to come in. Cost inflation is likely to be moderate in the next couple of years and the company should also benefit from the increase in prodution at the Styldrift. The balance sheet is likely to remain in a net cash position on our estimates.

Valuation

Our target price for IMP is ZAR250. We derive our target price by using an average of our DCF, SoTP, and EV/EBITDA (c3.5x) multiple valuations. We view this as an appropriate methodology as it accounts for the PGM pricing profile over the near to medium term, while valuing the long reserve mine life of IMP at our normalized long-term price forecasts.
Our DCF analysis uses a weighted average cost of capital (WACC) of 5.0% for the PGM operations. Our NPV is calculated based on real long-term equilibrium price forecasts.

Risks

Our valuation of IMP is exposed to macroeconomic developments affecting PGM prices and exchange rates, operational risks that might affect volumes and input costs, political and regulatory risks that might affect costs and the company's reputation and risks associated with power outages.

Macroeconomic risks: Our valuation of IMP is highly dependent on input assumptions for platinum, palladium, and rhodium prices, as well as the rand/US dollar exchange rate. Downside risks to our view include lower-than-expected PGM prices and a stronger-than-expected rand.

Operational risks: We base our production and cost outlook for IMP's individual mines on management guidance and by applying our discretion to management's guidance and targets. The main downside risk to our view is that more capex is required to sustain current production levels than is assumed in our valuation model. Other operational risks include IMP failing to contain costs at lease, and a deterioration in political conditions in Zimbabwe, which could prevent further growth for IMP in that country.

If the impact from any of these factors proves to be more negative than we anticipate, the stock will likely have difficulty achieving our financial and price targets. However, if any of these factors proves to have less of an effect than we anticipate, the stock could materially outperform our targets.

Northam Platinum Holdings LTD

Company description

Northam owns three PGM mines in South Africa – Zondereinde, Booysendal and Eland. The company currently produces over 1moz of PGMs (6E) which could further increase to c1.2moz in the next four years. Once ramp up finishes, Booysendal will account for c51% of production, Zondereinde c34% and Eland c15%. The group also operates a metallurgical complex at its Zondereinde operation, comprising smelter and base metal removal facilities and owns a PGM recycling facility in the US. PGMs are refined by two toll refiners.

Investment strategy

We are Buy on Northam. The company has a robust business with better fundamentals than most of the peers. It has invested across the cycle and has trebled its production in the past 10 yrs organically. This incremental production is capital light/low cost and now dominates the overall production. This should lead to superior ROE vs the peers driving rerating in our view. Balance sheet continues to strengthen, and company has already resumed dividend payment. Unit cost performance is in line with major peers despite Northam not undertaking any major portfolio restructuring.
FCF is also likely to be positive on the back of lower capex (as growth capex almost over). This is likely to support dividend payments and result in stronger balance sheet in our view.

Valuation

We derive our target price for NPH by using an average of DCF based SoTP valuation and EV/EBITDA multiple based valuation. We view this as an appropriate methodology as it accounts for near to medium term earnings momentum, while valuing the long reserve mine life of NPH at our normalized long term price forecasts.

Our DCF analysis uses a Weighted Average Cost of Capital (WACC) of 5.0%. Our NPV is calculated based on real long-term equilibrium price forecasts. We arrive at an NPV valuation using the DCF method and using c5x EV/EBITDA multiple. On a blended basis our TP for NPH is ZAR290.

Risks

Our valuation/TP is exposed to macroeconomic developments affecting PGM prices and exchange rates, operational risks that might affect volumes and input costs, political and regulatory risks that might affect costs and the company's reputation and risks associated with power outages.

Macroeconomic risks: Our valuation of NPH is highly dependent on input assumptions for platinum, palladium, and rhodium prices, as well as the rand/US dollar exchange rate. Downside risks to our view include lower-than-expected PGM prices and a stronger-than-expected rand.

Operational risks: We base our production and cost outlook for NPH's individual mines on management guidance and by applying our discretion to management's guidance and targets. The main downside risk to our view is that more capex is required to sustain current production levels than is assumed in our valuation model. Other operational risks include NPH failing to contain costs at Eland. If the impact from any of these factors proves to be more negative than we anticipate, the stock will likely have difficulty achieving our financial and price targets. However, if any of these factors proves to have less of an effect than we anticipate, the stock could materially outperform our targets

Sibanye Stillwater Ltd

Company description

Sibanye Stillwater (SSW) was unbundled in 2013. Initially, Sibanye held primarily gold assets such as Kloof, Driefontein and Beatrix mines and some PGM assets such as Kroondal and Mimosa. Starting 2016, Sibanye acquired Rustenburg, Stillwater and Marikana assets and has transformed into a major PGM (+gold) producer. PGM now accounts for majority of production. SSW also has the one of the highest Pd content in its overall PGM mix product vis-à-vis peers. The PGM assets are located in South Africa, US and Zimbabwe while gold assets are located in South Africa only. In the past 2-3 years, Sibanye has acquired lithium/nickel/zinc assets with a strategy to expand into battery metals segment.

Investment strategy

We rate Sibanye Neutral. Cash burn at US PGM operations, and uncertainty related to legal proceeding against Appian Capital were the major concern in our view. But with recent rise in Pd prices and settlement with Appian Capital concluded we are increasingly becoming constructive on the company. In addition, longer term, the lithium assets present further potential upside, but are likely to lead to higher leverage (vs the peers) medium term.

Valuation

We derive our TP of Sibanye by using a 50:50 SoTP DCF and EV/EBITDA valuation methodology. We view this as an appropriate methodology as it accounts for near term weaker PGM prices, while valuing the long reserve mine life of SSW and projects at our normalized long-term price forecasts. Our DCF analysis uses a weighted average cost of capital (WACC) of 5% for the PGM operations. Our NPV is calculated based on real long-term equilibrium price forecasts. We arrive at an NPV valuation using the DCF method and using c2.2x EV/EBITDA multiple. On a blended basis our TP for Sibanye is ZAR37/sh.

Risks

General sector wide risks to our target price
Our valuation is exposed to macroeconomic developments affecting PGM prices and exchange rates, operational risks that might affect volumes and input costs, political and regulatory risks that might affect costs and the company's reputation and risks associated with power outages. Downside risks to our view include lower-than-expected PGM prices (esp Palladium price which could have substantial impact on US PGM ops) and a stronger-than-expected rand. Conversely, any depreciation of local currency or higher than expected commodity prices are upside risks.

Company specific risks to our target price
Value destruction from M&A – the successful integration (and turnaround of some) of the acquired assets under battery metal strategy remains key to re-rating of the stock; any operational slippages there could prevent the stock to re-rate. Moreover, incremental M&A of larger scale runs the risk of balance sheet leverage as well as digression of management attention from current asset suit.
Labour relations - Mine safety remains central to operational stabilization and ESG perception for the stock; and slippages there could pose a risk to re-rating for the stock. Moreover, labor unrests which has mostly impacted company’s gold operations could pose significant risk.

In addition there are risks from ongoing lawsuit regarding cancelled Brazilian mines deal.

If the impact on the company from any of these factors proves to be greater than we anticipate, the stock will likely have difficulty achieving our target price. Likewise, if any of these factors proves to have less of an effect than we anticipate, the stock could outperform our target.

Valterra Platinum Ltd

Company description

Valterra Platinum (VAL) is the world's largest PGM producer and accounts for c20% of world's refined PGM production. Approximately 95% of the production (refined) comes from South Africa and the rest from Zimbabwe.

VAL's operations are fully integrated. It also owns smelters and refiners. The company holds five operating mines located primarily in Southern Africa which include a strategically important low-cost, open pit mine, Mogalakwena.

Investment strategy

We rate SA listed VAL as Neutral primariy for two reasons (i) the company is currently trading at multiples higher than industry average, and (ii) there is a bit of uncertainty on the production/cost profile of the Mogalakwena mine as company is looking for new ways to extract the reserves. Mogalakwena is currently a low-cost mine (falls in the bottom quartile of the cost curve) and accounts for c.40% of the company’s mined production. This mine has been one of the reasons for VAL’s historical premium vs peers. This overhang is likely to remain for some time in our view.

Valuation

We set our target price for VAL at ZAR1150/share using an average of DCF-based NPV and c5x 1 yr fwd EV/EBITDA multiple. We arrive at a DCF-based enterprise value using a WACC of 5% and terminal growth of c1% from which we then reduce pension liabilities, net debt and minorities to arrive at our NPV.

Risks

Our valuation of VAL is exposed to macroeconomic developments affecting PGM prices and exchange rates, operational risks that might affect volumes and input costs, political and regulatory risks that might affect costs and the company's reputation and risks associated with the power outages.

We highlight the following risks to our TP:
Macroeconomic risks: Our valuation of VAL is highly dependent on input assumptions for platinum, palladium, and rhodium prices, as well as the rand/dollar exchange rate. Upside risks to our view include higher-than-expected PGM prices and a weaker-than-expected rand.

Operational risks: We base our production and cost outlook for VAL's individual mines on management guidance and the application of our discretion to management's guidance and targets. We caution downside risk to our generally favorable cost assumptions, given the inflationary environment in which VAL operates. The main upside risk to our view is better-than-expected cost performance by the company.

Political and regulatory risks: The company is exposed to government and regulatory-related risks in the countries in which it operates. Specific risks include higher-than-expected royalties, production delays from government intervention and labour unrest.

If the impact from any of these factors proves to be more negative than we anticipate, the stock will likely have difficulty achieving our financial and price targets. However, if any of these factors proves to have less of an effect than we anticipate, the stock could materially outperform our targets.

Valterra Platinum Ltd

Company description

Valterra Platinum (VAL) is the world's largest PGM producer and accounts for c20% of world's refined PGM production. Approximately 95% of the production (refined) comes from South Africa and the rest from Zimbabwe. VAL's operations are fully integrated. It also owns smelters and refiners. The company holds five operating mines located primarily in Southern Africa which include a strategically important low-cost, open pit mine, Mogalakwena.

Investment strategy

We rate London listed VALT as Neutral primarily for two reasons (i) the company is currently trading at multiples higher than industry average, and (ii) there is a bit of uncertainty on the production/cost profile of the Mogalakwena mine as company is looking for new ways to extract the reserves. Mogalakwena is currently a low-cost mine (falls in the bottom quartile of the cost curve) and accounts for c.40% of the company's mined production. This mine has been one of the reasons for Valterra's historical premium vs peers. This overhang is likely to remain for some time in our view.

Valuation

We set our target price for VALT at £50/share based on an average of DCF-based NPV and c5x 1 yr fwd EV/EBITDA multiple. We arrive at a DCF-based enterprise value using a WACC of 5% and terminal growth of c1% from which we then reduce pension liabilities, net debt and minorities to arrive at our NPV.

Risks

This stock screens as High Risk in our quantitative model, but this is driven by the short trading history of the London listing. We do not believe a High Risk rating is supported by as the company is low on the platinum cost curve (and will be profitable at low prices) and has a strong balance sheet and so a High Risk rating has not been applied.
VALT is exposed to macroeconomic developments affecting PGM prices and exchange rates, operational risks that might affect volumes and input costs, political and regulatory risks that might affect costs and the company's reputation and risks associated with the power outages.

We highlight the following risks to the achievement of our TP:

Macroeconomic risks: Our valuation is highly dependent on input assumptions for platinum, palladium, and rhodium prices, as well as the rand/dollar exchange rate. Upside risks to our view include higher-than-expected PGM prices and a weaker-than-expected rand.

Operational risks: We base our production and cost outlook for VALT's individual mines on management guidance and the application of our discretion to management's guidance and targets. We caution downside risk to our generally favorable cost assumptions, given the inflationary environment in which VALT operates. The main upside risk to our view is better-than-expected cost performance by the company.

Political and regulatory risks: The company is exposed to government and regulatory-related risks in the countries in which it operates. Specific risks include higher-than-expected royalties, production delays from government intervention and labour unrest.

If the impact from any of these factors proves to be more negative than we anticipate, the stock will likely have difficulty achieving our financial and price targets. However, if any of these factors proves to have less of an effect than we anticipate, the stock could materially outperform our targets

Citigroup Global Markets Inc. or its affiliates expects to receive or intends to seek, within the next three months, compensation for investment banking services from Anglogold Ashanti PLC.

Citigroup Global Markets Inc. or its affiliates received compensation for products and services other than investment banking services from Anglogold Ashanti PLC,Gold Fields Ltd,Sibanye Stillwater Ltd,Valterra Platinum Ltd in the past 12 months.

Citigroup Global Markets Inc. or its affiliates currently has, or had within the past 12 months, the following as investment banking client(s): Anglogold Ashanti PLC,Gold Fields Ltd,Sibanye Stillwater Ltd.

Citigroup Global Markets Inc. or its affiliates currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: Anglogold Ashanti PLC,Gold Fields Ltd,Sibanye Stillwater Ltd,Valterra Platinum Ltd.

Citigroup Global Markets Inc. or its affiliates currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: Anglogold Ashanti PLC,Gold Fields Ltd,Sibanye Stillwater Ltd,Valterra Platinum Ltd.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Anglogold Ashanti PLC,Gold Fields Ltd,Sibanye Stillwater Ltd. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For financial instruments recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in such financial instruments (and any underlying instruments) and may act as principal in connection with transactions in such instruments. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 6th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			Catalyst Watch		
Data current as of 01 Jul 2026	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage (Neutral=Hold)	61%	32%	7%	36%	48%	16%

% of companies in each rating category that are investment banking clients	38%	42%	27%	42%	37%	36%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Citi Research may suspend its rating and target price and assign “Rating Suspended” status for regulatory and/or internal policy reasons. Citi Research may also suspend its rating and target price and assign "Under Review" status for other exceptional circumstances (e.g. lack of information critical to the analyst's thesis, trading suspension) affecting the company and/or trading in the company's securities. In both such situations, the rating and target price will show as “—“ and “-“ respectively in the rating history price chart. Prior to 11 April 2022 Citi Research assigned “Under Review” status to both situations and prior to 11 Nov 2020 only in exceptional circumstances. As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch/Short Term Views (“STV”) Ratings Disclosure:
Catalyst Watch and STV Upside/Downside calls: Citi Research may also include a Catalyst Watch or STV Upside or Downside call to indicate the analyst expects the share price to rise (fall) in absolute terms over a specified period of 30 or 90 days in reaction to one or more specific near-term catalysts or events impacting the company or the market. A Catalyst Watch will be published when Analyst confidence is high that an impact to share price will occur; it will be a STV when confidence level is moderate. A Catalyst Watch or STV Upside/Downside call will automatically expire at the end of the specified 30/90 day period. The Catalyst Watch will also be automatically removed if share price performance (calculated at market close) exceeds 15% against the direction of the call (unless over-ridden by the analyst). The analyst may also remove a Catalyst Watch or STV call prior to the end of the specified period in a published research note. A Catalyst Watch/STV Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch/STV Upside call corresponds to a buy recommendation and a Catalyst Watch/STV Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside, Catalyst Watch Downside, STV Upside, or STV Downside call is considered Catalyst Watch/STV No View. For purposes of FINRA ratings distribution-disclosure rules, we correspond Catalyst Watch/STV No View to Hold in our ratings distribution table for our Catalyst Watch/STV Upside/Downside rating system. However, we reiterate that we do not consider No View to be a recommendation. For all Catalyst Watch/STV Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

RESEARCH ANALYST AFFILIATIONS / NON-US RESEARCH ANALYST DISCLOSURES
The legal entities employing the authors of this report are listed below (and their regulators are listed further herein). Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization (but are employed by an affiliate of the member organization) and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Citigroup Global Markets India Private Limited	Shashi Shekhar, CFA
Citigroup Global Markets Limited	Krishan M Agarwal; Ephrem Ravi

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day’s market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author’s previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citi Research has implemented policies for identifying, considering and managing potential conflicts of interest arising as a result of publication or distribution of investment research. A description of these policies can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows; Q1 2026 Buy 33%(63%), Hold 44% (52%), Sell 23% (46%), RV 0.5% (89%): Q4 2025 Buy 33% (63%), Hold 44% (50%), Sell 23% (46%), RV 0.4% (91%); Q3 2025 Buy 33% (61%), Hold 44% (52%), Sell 23% (50%), RV 0.4% (80%); Q2 2025 Buy 33%(63%), Hold 44% (51%), Sell 23% (49%), RV 0.4% (86%). For the purposes of disclosing recommendations other than for equity (whose definitions can be found in the corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from LSEG Data & Analytics. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Please be advised that pursuant to Executive Order 13959 as amended (the "Order"), U.S. persons are prohibited from investing in securities of any company determined by the United States Government to be the subject of the Order. This research is not intended to be used or relied upon in any way that could result in a violation of the Order. Investors are encouraged to rely upon their own legal counsel for advice on compliance with the Order and other economic sanctions programs administered and enforced by the Office of Foreign Assets Control of the U.S. Treasury Department.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail clients or to non-Eligible Clients. The presenter is not licensed as investment advisor or investment marketer by the Israeli Securities Authority ("ISA") and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this communication may not be offered or sold to any Israeli person except pursuant to a security offering exemption according to the Israeli Securities Law, 1968and the public offering rules provided thereunder.

Citi Research broadly and simultaneously disseminates its research content to the Firm's institutional and retail clients via the Firm's proprietary electronic distribution platforms (e.g., Citi Velocity and various Global Wealth platforms). As a convenience, certain, but not all, research content may be distributed through third party aggregators. Clients may receive published research reports by email, on a discretionary basis, and only after such research content has been broadly disseminated. Certain research is made available only to institutional investors to satisfy regulatory requirements. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Resolução 20 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. Statements and views concerning ESG (environmental, social, governance) factors are typically based upon public statements made by the affected company or other public news, which the author may not have independently verified. ESG factors are one consideration that investors may choose to examine when making investment decisions. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Citigroup legal entity that takes responsibility for the production of the Product is the legal entity which the first named author is employed by.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.

Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested.The yield and average life of CMOs (collateralized mortgage obligations) referenced in this Product will fluctuate depending on the actual rate at which mortgage holders prepay the mortgages underlying the CMO and changes in current interest rates. Any government agency backing of the CMO applies only to the face value of the CMO and not to any premium paid. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Card Insights. Where this report references Card Insights data, Card Insights consists of selected data from a subset of Citi's proprietary credit card transactions. Such data has undergone rigorous security protocols to keep all customer information confidential and secure; the data is highly aggregated and anonymized so that all unique customer identifiable information is removed from the data prior to receipt by the report's author or distribution to external parties. This data should be considered in the context of other economic indicators and publicly available information. Further, the selected data represents only a subset of Citi's proprietary credit card transactions due to the selection methodology or other limitations and should not be considered as indicative or predictive of the past or future financial performance of Citi or its credit card business.

Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes the Firm's estimates, data from company reports and feeds from LSEG Data & Analytics. The source for all referenced prices, unless otherwise stated, is DataCentral. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance. The printed and printable version of the research report may not include all the information <(e.g. certain financial summary information and comparable company data) that is linked to the online version available on the Firm's proprietary electronic distribution platforms.
