WinWay Technology 6515.TW 6515 TT

EQUITY: OSAT

Attractive valuation; initiate coverage at Buy

Ties with key AI chips to drive growth in probe card and socket businesses; improving risk-reward

Rating Starts at	Buy
Target price Starts at	TWD 8,315.00
Closing price 22 July 2026	TWD 6,500.00
Implied upside	+27.9%
Market Cap (USD mn)	7,245.7
ADT (USD mn)	117.4

Initiate coverage with a Buy rating and a TP of TWD8,315, implying 28% upside

We initiate coverage of WinWay with a Buy rating along with our *Anchor Report*. Our positive outlook for the company is premised on: 1) strong revenue growth prospects for its probe card segment, driven by AI, high-end graphics and networking products; 2) several upcoming new projects in the socket business, with WinWay enjoying a dominant share within leading GPU vendors, alongside share gains in the system-level-test (SLT) business; the upcoming TPU project likely to augment growth as well; 3) more testing insertions such as burn-in (BI) and SLT being added to the latest AI/HPC chips, and new testing processes such as functional burn-in being under consideration; 4) higher product value content led by requriements to address high pin count, larger package size, higher speed/frequency, and heat density, etc (*Fig. 1*); 5) WinWay's innovative solutions such as HyperSocket potentially taking off in 2028F (*Fig. 5*); and 6) WinWay engaging in high-profile CPO testing insertions, with opportunities for Insertion 3 and Insertion 4 (*Fig. 9* - *Fig. 13*), in our view. We expect revenues from the probe card and coaxial socket segments (already accounted for a combined 70% of total revenue in 1Q26) to record 67% and 86% CAGRs over 2026-28F, respectively. In terms of new business, we assume HyperSocket would account for ~5% of total revenue in 2028F (*Fig. 5*). Many of the developments discussed here are still at a nascent stage, but their directions are clear, i.e. most are anchored to structural forces and are difficult to reverse, in our view. Our TP of TWD8,315 is based on 32x 2027-28F average EPS. The 32x target multiple is in the middle of its historical trading range. Key risks include: 1) weaker demand in the AI/HPC market or a slowdown of AI proliferation, 2) fierce competition in the test interface market and share loss, and 3) worse-than-expected profitability.

Near-term share price weakness could provide attractive entry opportunity

WinWay's share price has corrected by 27% since July (vs. TAIEX down 5%), as rising macro risks and overall sentiment on AI has taken a slight turn amid concerns about *New York's moratorium on data center development* and *Meta's (META US, Not rated) initiatives around Meta Compute*. Its share price also reacted to company-specific issues, in our view, after the release of June earnings. We estimate 2QFY26F GM at 39.7%, considering the preliminary June results. While more clarity will emerge after its 2Q26 earnings release, an increase in revenue contribution from MEMS probe cards, as well as unfavorable product mix (more consumer electronics) are potential drivers for the likely narrowed 2Q26F GM. We expect the impact to be temporary, and GM to gradually trend up in 2H26F. We see short-term share price weakness as buying opportunities.

Company profile

Established in 2001 in Kaohsiung, WinWay started its business with test fixtures for optoelectronic products, and subsequently expanded into high-end test sockets for logic ICs, later adding probe cards and thermal control solutions.

Valuation Methodology

Our TP of TWD8,315 is based on 32x average 2027-28F EPS, which is the mid end of its historical range. The benchmark index is TAIEX.

Risks that may impede the achievement of the target price

Major downside risks to WinWay include 1) weaker demand in AI/HPC market or slowdown of AI proliferation, 2) fierce competition in test interface market and share loss, and 3) worse-than-expected profitability

ESG

WinWay's ESG efforts center on operational resource efficiency — in 2023 it cut water usage by 28.9% and sourced 15% of electricity from green energy, alongside ISO 14001/45001 certifications. As a TWSE-listed company it publishes an annual sustainability report, though it has no public RE100 or net-zero commitment, reflecting earlier-stage ESG maturity versus larger peers.

Probe cards to lead next wave of sales growth

Probe cards to contribute 25-30%+ of sales in 2026-28F; MEMS a notable new driver

WinWay's probe card business is highly correlated to nVidia's (NVDA US, Not rated) gaming graphics. Before the AI boom, its probe card revenue largely followed nVidia's two-year graphics launch cadence (the segment showed signifiant revenue growth in 2018/2020/2022).

The company's probe card business grew nearly four-fold in 2025 vs. 2024, primarily driven by high-end graphics and initial volumes of new GPU platform/networking products. Mass production volume (for test interface) of the new GPU platforms (including CPUs) has started since early-2026. Networking products will also sustain their revenue momentum along with new platform ramp-up, in our view. Notably, starting from Vera CPU, nVidia has adopted MEMS technology (vs. Grace CPU that uses cobra pins). We believe WinWay participates in these key projects. As noted in our *Asia AI Semi and Server report* , we see unprecedented CPU demand driven by agentic AI, and in the same report we specifically acknowledge nVidia CEO and founder Jensen Huang's comment: "We have visibility to nearly USD20 billion in total CPU revenue this year". The comment and the demand direction are particularly positive for WinWay, in our view. WinWay's probe card market position has risen significantly — its ranking in non-memory probe card improved from No.19 in 2021 to No.5 in 2025, according to Yole (see our *Anchor Report* for more illustrations of the probe card market).

ASICs are also gradually migrating to MEMS probes, depending on fabless vendors. We estimate that about 90% of WinWay's probe card business in 2025 came from cobra probe cards (driven by high-end graphics), while the portion of MEMS probe cards will likely reverse and account for 80%+ of the company's probe card business in 2026F, a significant increase, by our estimate. Despite MEMS probe card GM remaining lower than that of cobra probe card, due to its much higher ASP, we expect MEMS probe card revenue to grow significantly into 2026-28F. We also expect new high-end graphic projects to record volume ramp-up in 2027F, together contributing to the probe card segment growth. We estimate probe card segment revenue to grow by 81%/75%/60% in 2026/27F/28F, accounting for 25-30% of total sales.

To cooperate with TPI for MEMS pins to address the demand for most advanced AI chips

WinWay's MEMS probe card shipments commenced in 2024, and its MEMS pins were procured from Technoprobe (TPI; TPRO IM, Not rated). In Phase I of the cooperation, the relatively small scale and the outsourcing business model impacted WinWay's GM for a short period (42-43% in 3Q25-1Q26 vs. 49% in 1H25). In Phase 2, *announced in Dec-2025* , TPI will grant WinWay the right to use its technology for a five-year period. The cooperation is aimed at addressing demand from most high-end probe cards, as advanced packaging technologies will continue driving the adoption of MEMS probe cards. We believe the business terms of phase 2 are likely to be realtively friendly for WinWay in terms of profitability, despite being still less favorable than non-MEMS probe cards. In our view, the cooperation with TPI provides WinWay opportunities to enter the high-end MEMS probe card segment without substantial upfront investments, and WinWay could assist more onsite services that are complementary to overseas vendors such as TPI, as well as superior customer relationships and broad customer base, given that the agreement is not exclusive to a specific customer.

Test socket business growth trajectory remains intact; further penetrating into key customer's SLT supply chain

Sockets remain WinWay's major business with 60-70% revenue contribution in 2025-28F, and the strong growth trajectory remains intact, supported by: **1) higher test socket content along with packaging complexity; 2) existing customers' market share gains as well as the rollout of new projects; 3) WinWay's share gains in key customers or key projects; and 4) opportunities in BI/SLT segments.**

Advanced packaging to drive socket content value

The transition to complex advanced packaging dramatically escalates both the engineering rigor and the commercial value of test sockets, with socket content per device scaling almost directly with package complexity. The exponential **rise in pin counts** translates one-to-one into more contact elements per socket, while **shrinking contact pitch** demands ultra-fine, metallurgically advanced probe pins that endure thousands of compression cycles while maintaining microscopic alignment. **Expanding package sizes** compounds the challenge: large organic substrates are highly susceptible to thermal warpage, so sockets must integrate sophisticated mechanical architectures to guarantee uniform coplanarity across the full array without cracking the silicon, in our view. Besides, **power densities** above 1,000W for AI accelerators force the integration of active thermal control (ATC), from air-cooled lids to full liquid-cooling solutions. Simultaneously, **extreme signal speeds** (112G/224G SerDes) and **mmWave frequencies** push socket design toward electrical limits: pins must be engineered with ultra-short signal paths (coaxial or elastomer structures) and low-dielectric housing materials to contain insertion loss, impedance mismatch, and crosstalk. Overcoming these intersecting mechanical, thermal, and electrical hurdles transforms the test socket from a simple mechanical fixture into a highly customized, high-margin precision instrument.

Depending on specs, we believe the common high performance socket ASP could reach 2-5x that of legacy specs, and because each new project requires device-specific customization on ever-shorter product cycles, this content upgrade trend is continuing, structurally elevating the strategic value of top-tier test interface suppliers across each silicon generation.

Application mix optimization ongoing; HPC/AI exceeded 60% of mix since 4Q25

Consumer electronics contributed about 50-60% of WinWay's total sales before 2023, and the ratio dropped to ~30% in 2025, with the gradual take-off of AI/HPC (28% of total revenue in 2022, and rose to 48% in 2025). We believe MediaTek (2454 TT, Buy), Apple (AAPL US, Not rated) and HiSilicon (unlisted) were notable customers for mobile (AP/modem), with HiSilicon once accounting for higher than 20% of total revenue in 2019 (dropped to none in 2021). However, due to the pandemic, and decoupling of the tech supply chain (along with export control/US sanctions), further fuelled by the booming of AI/HPC, WinWay's customer base has gradually shifted from consumer-electronic focused OEM/OSATs to AI/HPC relevant fabless. That said, WinWay still supplies sockets to key smartphone projects.

For flagship smartphones, socket pin count is around 2-3k. The pin count could be 6-7k for server applications, and further grows to around 10k or more pins for the most advanced AI chips. Therefore, the more AI/HPC application exposure (usually along with higher socket technical requirements thus higher content), the better for overall content value for WinWay. From a product mix perspective, WinWay's RF&plastic sockets are mainly for mobile applications (AP/modem/PA), and AI/HPC applications are largely using coaxial sockets currently. We detail different sockets and probe selection factors in our *Anchor Report*. The proportion of RF and plastic sockets in WinWay's total revenue declined from 41% in 2019 to 9% in 2025, while that of coaxial socket grew from 29% to 43%.

We believe that the two largest merchant GPU vendors are WinWay's major customers. Currently, based on our industry checks, WinWay supports most of nVidia's FT sockets, and has some market share in AMD's (AMD US, Not rated) sockets. We also expect WinWay to participate in some upcoming TPU projects, as well as Axion CPUs. As sockets will likely be ready at least in 1-2 quarters before chip mass production (*Fig. 3*), we expect socket volumes for these key projects to contribute from 1H26F. Note that other than AI GPUs/ASICs, server CPU is witnessing significant demand growth along with agentic AI boom and that bodes well for WinWay as well.

Besides test sockets, WinWay has ~10% of revenue coming from contact elements. Usually, customers do not replace an entire socket, but would replace pins with issues. A socket's useful life depends on application, but high current is one important factor.

Penetrating into key customer's SLT socket supply chain; functional BI under discussions

Testing insertions beyond pure final-test (FT) is gaining more traction to avoid defects (the failure costs are higher than that for legacy chips due to the adoption of advanced nodes and packaging technologies, inclusion of expensive external silicon content such as HBM, and the finished products value are also much higher). Not only do suppliers want to detect problems earlier (thus the trend of "shift-left" and tendency to spend more budgets on chip probing), additional testing process such as burn-in and SLT are increasingly common within final test.

New business opportunities have emerged for WinWay; notably, we observe that **the company has successfully penetrated into key GPU vendor's SLT sockets supply chain** (vs. previously mainly served FT sockets), gaining share from oversea vendors, likely due to their performance issues. Given that SLT testing has features such as longer testing time, and thus strong parallelism (to test lots of chips simultaneously to increase units per hour [UPH]), SLT will drive substantial volume demand of test sockets, in our view.

Another nascent trend is functional burn-in. Recall that burn-in socket is actually a GM dragger for WinWay (its complexity and signal integrity requirement is lower than that for FT/SLT sockets, and thus a lower ASP), and WinWay's exposure to burn-in sockets has always stayed at or below 10% of total sales. However, also due to chip complexity (notably, heat issues and extreme usage environment such as AI/HPC), there are more problems to handle during burn-in test. The new term functional burn-in aims to test more functionality vs. conventional BI (mass production BI), spanning pressure, temperature, humidity, and reliability. The process is likely to conduct system-level-test and burn-in test at the same time, with the objective to lengthen chips' useful lives. Under the new term, socket ASP and GM would be much better than legacy burn-in sockets (stringent requirements for material proprieties and electrical performance). Adding test insertions requires cooperation and coordination between ATE/equipment vendors, OSATs, and test interface suppliers; most importantly, customers need additional efforts for innovative testing programs, thus rigorous technical assessment, and cost/benefits need to be closely evaluated. We believe the actual adoption rate of functional burn-in is another development to watch out for in the coming years, and once production rampsup, it may become another revenue driver for WinWay.

HyperSocket to bear fruit beyond 2027F

HyperSocket combines pogo pins and elastomer together to address larger and more complicated chip packages

HyperSocket is WinWay's next-generation test socket platform designed for ultra-large package, high-frequency and high-speed applications, targeting AI and HPC devices built on 2.5D/3D advanced packaging. The patented structure was developed to meet sensitive contact-resistance test requirements: it provides a soft contact interface that avoids damage to solder balls, and maximizes production efficiency.

Conventional elastomer sockets are constrained by film thickness, which limit vertical stroke/compliance (a growing problem as ultra-large AI packages suffer from warpage). Spring probe (pogo pin) sockets offer good compliance but limited contact quality (as a standard crown tip provides only 4-9 contact points per pin, which do not touch the solder ball simultaneously and potentially cap the achievable contact resistance and current-carrying capability [CCC].) **HyperSocket resolves this trade-off by using spring probes to provide stroke/compliance and an elastomer layer to provide surface-area contact against the solder ball, delivering both low, stable contact resistance and tolerance for large-package warpage**; the platform also extends to dual-layer (upper/lower, e.g. HyperSocket-Dual Film) and liquid-cooled configurations.

Capacity constraint to cap revenue upside

WinWay sees strong demand from customers for HyperSocket to be adopted in mass production volume, and it gave large order projections as early as 2025. However, the current bottleneck mainly falls in elastomer capacity, as this has not been WinWay's focus in the past. Costs will likely be another consideration for customers, as the HyperSocket solution carries a higher initial investment than conventional sockets (HyperSocket ASP is 30% higher), and the elastomer layer also becomes a consumable, requiring periodic replacement.

However, we believe HyperSocket design would be more widely adopted when the package size exceeds 100*100mm/120*120mm, especially when pin count exceeds 10k-20k, while current mainstream GPUs/ASICs substrate size has not yet exceeded the threshold (*Fig. 4*); thus pogo pins are still dominant solutions. We observe some next-gen chips roadmap is approaching the limit (such as upcoming AMD MI455 or TPUv9 series beyond 2027F). Larger package size is an unavoidable trend, and we expect HyperSocket penetration to gradually increase. Note that during 1H26 earnings call, WinWay management set 5% as the high-end segment revenue target for HyperSocket in 2027E. **We believe a suitable timeframe to expect a meaningful revenue contribution (say 5% of total revenue) from HyperSocket could be in 2028-29F (considering less than 1% of total revenue contribution in 2025F, still in low-single digit in 2026F, and less than 5% in 2027F, on our estimates, *Fig. 5*).**

Fig. 4: Key GPUs substrate size is growing

We tentatively assume 80x115mm substrate size for Feynman

Industry CPO progress worth tracking

Silicon Photonics (Siph)/CPO is another rising trend in semiconductor manufacturing. We have detailed our understanding of testing flows in CPO testing in our *Anchor Report* and in *Fig. 9*. In May-2026, WinWay hosted a forum to discuss “The Evolution of Co-Packaged Optics (CPO) — Advanced Testing Methodologies for Silicon Photonics”, in which it presented the reasons to adopt CPO, different approaches from various industry vendors, testing insertions flows, and WinWay’s solutions.

Our understanding of CPO testing insertion is as follows: **Insertion 1** is PIC and EIC single-sided wafer-level test; **Insertion 2** is double-sided wafer-level test after hybrid bonding; **Insertion 3** may include two optical engine (OE)-level testing steps after singulation — before and after packaging (attach FAU [fiber array unit]/receptacle/structural reinforcements), and **Insertion 4** is the module-level test after the optical engine is mounted on the substrate. WinWay showcased its WLCSP pitch probe head for EIC/PIC wafer/die testing, double-sided probing system, as well as optical engine (OE) test socket and HyperSocket.

While final testing flows and vendor selection could vary by customer, we expect WinWay to have more niche on socket opportunities in Insertion 3 and Insertion 4, namely after singulation, and more likely after packaging, as packaging-level-test has long been its core competency.

Our view on the CPO timeline now largely aligns with nVidia’s product roadmap — for scale-out switch to ramp up in 2H26 along with Rubin platform (see *2026 GTC note*). However, given there are a lot of technical challenges for the brand-new architecture, we expect any large volume to come in 2027F and beyond, and the TAM will likely be further enlarged after CPO penetrates into scale-up (likely in Feynman).

Share price recap

WinWay was listed in January 2021, but the share price was under pressure initially due to the US imposing restrictions on Huawei (unlisted), and thus it lost some business opportunities. Other than smartphone, PC/gaming was also a major part of its business. As the smartphone business gradually weakened, WinWay shifted gears to AI/HPC step by step. While WinWay's 2022 operating results showed a significant leap vs. 2021, the share price did not perform much due to overall peaking of the semiconductor cycle and macro headwinds. Finally, along with AI's emergence from end-2022, its share price started to climb. Despite the continued strong performance of AI/HPC into 2023, consumer electronics went through a severe inventory correction in 2023 (before bottoming out in 1Q24). That said, WinWay's share price still doubled from ~TWD400 from early-2023 to ~TWD800 at end-2023, benefiting from AI megatrend (vs. the TAIEX which rose 27% in 2023).

The AI/HPC socket business ramp-up brought its average monthly sales to ~TWD500mn in 2024 from ~TWD300mn in 2023. The probe card business further drove strong growth in 2025. Following its solid revenue expansion in 1Q25, the share price rose substantially (up 148% vs. the TAIEX up 26% in 2025). In 1H26, the share price rose sharply on increased expectations and enhanced visibility on upcoming key project ramp-up. It then started to decline from TWD9,000 in early July to TWD6,500 as of 22 July 2026, as rising macro risks and overall sentiment on AI has taken a slight turn amid concerns about *New York's moratorium on data center de velopment* and *Meta's (META US, Not rated) initiatives around Meta Compute*. We also note the recent share price pullback is potentially reacting to company-specific issues after the release of June quarter earnings, for which we observe likely worse-than-expected profitability.

Financial analysis and risks

We estimate a 69% revenue CAGR over 2026-28F

We expect the two largest segments — probe card and socket — to drive WinWay's revenue expansion in the next 2-3 years, as more and more AI/HPC projects are being added to the pipeline every day, driving higher volume demand and content value, with greater opportunities from additional test insertions such as BI/SLT and the emergence of CPO, and as WinWay itself also gains share from existing suppliers. Currently, due to the packed project pipeline, the largest revenue bottleneck is capacity. We believe WinWay will stay fully-utilized into 2027F (the company's capacity expansion plan is shown in *Fig. 32*), and pricing power could also improve amid the supply-constrained environment. We model WinWay's total revenue to grow by 84%/73%/65% in 2026F/27F/28F, at a 69% CAGR over 2026-28F, vs. 46% over 2023-25.

Temporary profitability headwinds; well-controlled opex to partly offset GM pressure

We estimate that the strong order momentum for MEMS probe card will temporarily temper WinWay's GM, and expect its GM to drop toward the low end of the 40-45% range in 2026F, vs. 45% in 2025. However, we expect that along with product mix improvement (more AI/HPC mix), better business value proposition, improving pricing power, and higher in-sourcing ratio, its GM will gradually get closer to 2025 levels in 2027-28F. We also expect operating leverage to materialize continuously in the forecast period, partially offsetting any GM pressure. We estimate a 94% EPS CAGR over 2026-28F, vs. 86% in 2023-25.

Valuation methodology and risks

Our TP of TWD8,315 is based on 32x average 2027-28F EPS. Our 32x target multiple is in the middle of the stock's historical trading range over the past five years. The company traded between 14x and 40x during 2H22-1H25, before rising to 80-90x around May 2026. We believe the recent share price underperformance has improved the overall risk-reward profile, and expect the company to be a major beneficiary of the ongoing AI trend given its business exposure to top GUPs and ASICs. We thus initiate coverage of the stock with a Buy rating, and view recent share price weakness as a good buying opportunity.

Risks to our call

Major downside risks to WinWay include: 1) weaker demand in AI/HPC market or slowdown of AI proliferation; 2) fierce competition in test interface market and share loss; and 3) worse-than-expected profitability

Company profile

WinWay is one of the world's leading semiconductor test interface suppliers; it was ranked No.2 in the test socket market in 2025, according to Yole. Established in 2001 in Kaohsiung, WinWay started its business with test fixtures for optoelectronic products, and subsequently expanded into high-end test sockets for logic ICs, later adding probe cards and thermal control solutions. Currently, its major business operations include test sockets, probe cards, contact elements (probe pins), forming a one-stop test interface solution. WinWay was officially listed on the TWSE in 2021.

WinWay's products support broad-based applications including HPC/AI accelerators, CPU/GPU, mobile SoC, networking and automotive ICs, with particular strength in large-size, high-power advanced packaging devices. For capacity allocation, socket production is concentrated at its Kaohsiung headquarters (with new fab expansion underway), probe card production capacity is in Hsinchu, supplemented by service and engineering sites across the US, Europe, Japan, Korea, Singapore and China.

Appendix A-1

This report has been produced by Nomura International (Hong Kong) Ltd., Taipei Branch (NITB), Taiwan.
See Disclaimers for Nomura Group entity details.

Analyst Certification

We, Vivian Yang, Aaron Jeng and Eric Chen, hereby certify (1) that the views expressed in this Research report accurately reflect our personal views about any or all of the subject securities or issuers referred to in this Research report, (2) no part of our compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this Research report and (3) no part of our compensation is tied to any specific investment banking transactions performed by Nomura Securities International, Inc., Nomura International plc or any other Nomura Group company.

Issuer Specific Regulatory Disclosures

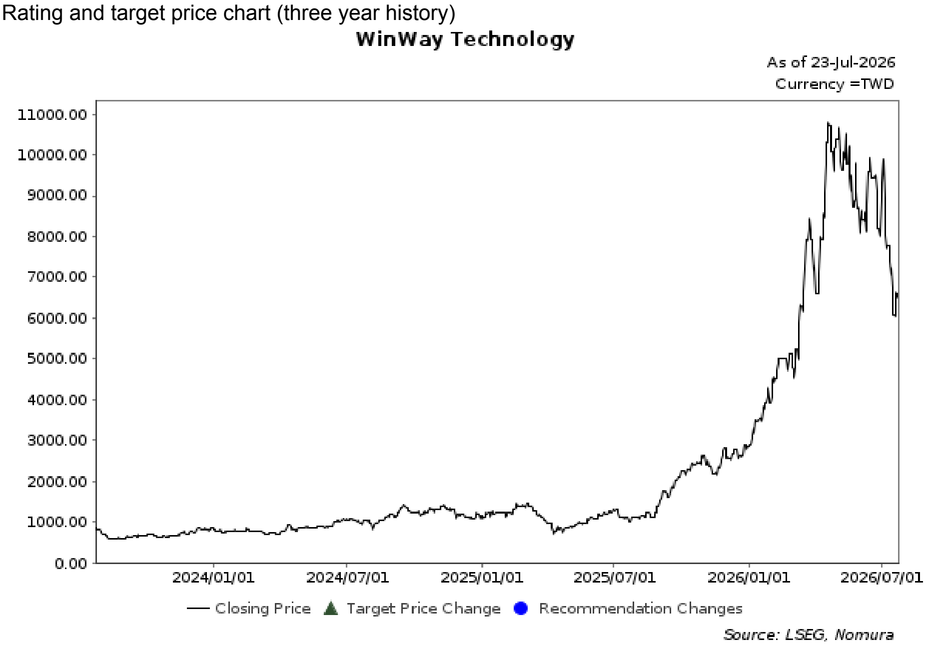
The terms "Nomura" and "Nomura Group" used herein refer to Nomura Holdings, Inc. and its affiliates and subsidiaries, including Nomura Securities International, Inc. ('NSI') and Instinet, LLC ('ILLC'), U. S. registered broker dealers and members of SIPC.

Materially mentioned issuers

Issuer	Ticker	Price	Price date	Stock rating	Sector rating	Disclosures
WinWay Technology	6515 TT	TWD 6,500.00	22-Jul-2026	Buy	N/A	

WinWay Technology (6515 TT) **TWD 6,500.00 (22-Jul-2026)** Buy (Sector rating: N/A)

Rating and target price chart (three year history)



Date	Rating	Target price	Closing price

For explanation of ratings refer to the stock rating keys located after chart(s)

Valuation Methodology Our TP of TWD8,315 is based on 32x average 2027-28F EPS, which is the mid end of its historical range. The benchmark index is TAIEX.
Risks that may impede the achievement of the target price Major downside risks to WinWay include 1) weaker demand in AI/HPC market or slowdown of AI proliferation, 2) fierce competition in test interface market and share loss, and 3) worse-than-expected profitability

Important Disclosures

Distribution of ratings (Nomura Group)

The distribution of all ratings published by Nomura Group Global Equity Research is as follows:
58% have been assigned a Buy rating which, for purposes of mandatory disclosures, are classified as a Buy rating; 33% of companies with this rating are investment banking clients of the Nomura Group*. 0% of companies (which are admitted to trading on a regulated market in the EEA) with this rating were supplied material services** by the Nomura Group.
39% have been assigned a Neutral rating which, for purposes of mandatory disclosures, is classified as a Hold rating; 57% of companies with this rating are investment banking clients of the Nomura Group*. 0% of companies (which are admitted to trading on a regulated market in the EEA) with this rating were supplied material services by the Nomura Group
3% have been assigned a Reduce rating which, for purposes of mandatory disclosures, are classified as a Sell rating; 15% of companies with this rating are investment banking clients of the Nomura Group*. 0% of companies (which are admitted to trading on a regulated market in the EEA) with this rating were supplied material services by the Nomura Group.
As at 30 June 2026.
**The Nomura Group as defined in the Disclaimer section at the end of this report.*
*** As defined by the EU Market Abuse Regulation*

Definition of Nomura Group's equity research rating system and sectors

The rating system is a relative system, indicating expected performance against a specific benchmark identified for each individual stock, subject to limited management discretion. An analyst's target price is an assessment of the current intrinsic fair value of the stock based on an appropriate valuation methodology determined by the analyst. Valuation methodologies include, but are not limited to, discounted cash flow analysis, expected return on equity and multiple analysis. Analysts may also indicate expected absolute upside/downside relative to the stated target price, defined as (target price - current price)/current price.

STOCKS

A rating of **'Buy'**, indicates that the analyst expects the stock to outperform the Benchmark over the next 12 months. A rating of **'Neutral'**, indicates that the analyst expects the stock to perform in line with the Benchmark over the next 12 months. A rating of **'Reduce'**, indicates that the analyst expects the stock to underperform the Benchmark over the next 12 months. A rating of **'Suspended'**, indicates that the rating, target price and estimates have been suspended temporarily to comply with applicable regulations and/or firm policies. Securities and/or companies that are labelled as **'Not rated'** or shown as **'No rating'** are not in regular research coverage. Investors should not expect continuing or additional information from Nomura relating to such securities and/or companies. Benchmarks are as follows: **United States/Europe/Asia ex-Japan:** please see valuation methodologies for explanations of relevant benchmarks for stocks, which can be accessed at: http://go.nomuranow.com/research/m/Disclosures; **Global Emerging Markets (ex-Asia):** MSCI Emerging Markets ex-Asia, unless otherwise stated in the valuation methodology; **Japan:** Russell/Nomura Large Cap.

SECTORS

A **'Bullish'** stance, indicates that the analyst expects the sector to outperform the Benchmark during the next 12 months. A **'Neutral'** stance, indicates that the analyst expects the sector to perform in line with the Benchmark during the next 12 months. A **'Bearish'** stance, indicates that the analyst expects the sector to underperform the Benchmark during the next 12 months. Sectors that are labelled as **'Not rated'** or shown as **'N/A'** are not assigned ratings. Benchmarks are as follows: **United States:** S&P 500; **Europe:** Dow Jones STOXX 600; **Global Emerging Markets (ex-Asia):** MSCI Emerging Markets ex-Asia. **Japan/Asia ex-Japan:** Sector ratings are not assigned.

Target Price

A Target Price, if discussed, indicates the analyst's forecast for the share price with a 12-month time horizon, reflecting in part the analyst's estimates for the company's earnings. The achievement of any target price may be impeded by general market and macroeconomic trends, and by other risks related to the company or the market, and may not occur if the company's earnings differ from estimates.

Disclaimers

(l) Nomura Fiduciary Research & Consulting Co., Ltd. ('NFRC') Tokyo, Japan. (m) Nomura Orient International Securities Co., Ltd ("NOI"), is a majority owned joint venture amongst Nomura Group, Orient International (Holding) Co., Ltd, and Shanghai Huangpu Investment Holding (Group) Co., Ltd. In accordance with the laws of the People's Republic of China ("PRC", excluding Hong Kong, Macau and Taiwan, for the purpose of this document), NOI is licensed in the PRC to provide securities research and investment recommendations and it operates independently from the other members of the Nomura Group; in particular, NOI's interests in PRC securities are not disclosed to, or aggregated with the holdings of, any other Nomura Group entities and the interests in PRC securities of other Nomura Group entities are not disclosed to, or aggregated with the holdings of, NOI. An individual name printed next to NOI on the front page of a research report indicates that individual is employed by NOI to provide research assistance to NIHK under a research partnership agreement. 'NSFSPL' next to an employee's name on the front page of a research report indicates that the individual is employed by Nomura Structured Finance Services Private Limited to provide assistance to certain Nomura entities under inter-company agreements. 'Verdhana' next to an individual's name on the front page of a research report indicates that the individual is employed by PT Verdhana Sekuritas Indonesia ('Verdhana') to provide research assistance to NIHK under a research partnership agreement and neither Verdhana nor such individual is licensed outside of Indonesia.

THIS MATERIAL IS: (I) FOR YOUR PRIVATE INFORMATION, AND WE ARE NOT SOLICITING ANY ACTION BASED UPON IT; (II) NOT TO BE CONSTRUED AS AN OFFER TO SELL OR A SOLICITATION OF AN OFFER TO BUY ANY SECURITIES IN ANY JURISDICTION WHERE SUCH OFFER OR SOLICITATION WOULD BE ILLEGAL; AND (III) OTHER THAN DISCLOSURES RELATING TO THE NOMURA GROUP, BASED UPON INFORMATION FROM SOURCES THAT WE CONSIDER RELIABLE, BUT HAS NOT BEEN INDEPENDENTLY VERIFIED BY NOMURA GROUP.

Other than disclosures relating to the Nomura Group, the Nomura Group does not warrant, represent or undertake, express or implied, that the document is fair, accurate, complete, correct, reliable or fit for any particular purpose or merchantable, and to the maximum extent permissible by law and/or regulation, does not accept liability (in negligence or otherwise, and in whole or in part) for any act (or decision not to act) resulting from use of this document and related data. To the maximum extent permissible by law and/or regulation, all warranties and other assurances by the Nomura Group are hereby excluded and the Nomura Group shall have no liability (in negligence or otherwise, and in whole or in part) for any loss howsoever arising from the use, misuse, or distribution of this material or the information contained in this material or otherwise arising in connection therewith.

Opinions or estimates expressed are current opinions as of the original publication date appearing on this material and the information, including the opinions and estimates contained herein, are subject to change without notice. The Nomura Group, however, expressly disclaims any obligation, and therefore is under no duty, to update or revise this document. Any comments or statements made herein are those of the author(s) and may differ from views held by other parties within Nomura Group. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The Nomura Group does not provide tax advice.

The Nomura Group, and/or its officers, directors, employees and affiliates, may, to the extent permitted by applicable law and/or regulation, deal as principal, agent, or otherwise, or have long or short positions in, or buy or sell, the securities, commodities or instruments, or options or other derivative instruments based thereon, of issuers or securities mentioned herein. The Nomura Group companies may also act as market maker or liquidity provider (within the meaning of applicable regulations in the UK) in the financial instruments of the issuer. Where the activity of market maker is carried out in accordance with the definition given to it by specific laws and regulations of the US or other jurisdictions, this will be separately disclosed within the specific issuer disclosures.

This document may contain information obtained from third parties, including, but not limited to, ratings from credit ratings agencies such as Standard & Poor's. The Nomura Group hereby expressly disclaims all representations, warranties or undertakings of originality, fairness, accuracy, completeness, correctness, merchantability or fitness for a particular purpose with respect to any of the information obtained from third parties contained in this material or otherwise arising in connection therewith, and shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of any of the information obtained from third parties contained in this material or otherwise arising in connection therewith. Reproduction and distribution of third-party content in any form is prohibited except with the prior written permission of the related third-party. Third-party content providers do not, express or implied, guarantee the fairness, accuracy, completeness, correctness, timeliness or availability of any information, including ratings, and are not in any way responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use or misuse of such content. Third-party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability or fitness for a particular purpose or use. Third-party content providers shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase hold or sell securities. They do

Investors should consider this document as only a single factor in making their investment decision and, as such, the report should not be viewed as identifying or suggesting all risks, direct or indirect, that may be associated with any investment decision. Nomura Group produces a number of different types of research product including, among others, fundamental analysis and quantitative analysis; recommendations contained in one type of research product may differ from recommendations contained in other types of research product, whether as a result of differing time horizons, methodologies or otherwise. The Nomura Group publishes research product in a number of different ways including the posting of product on the Nomura Group portals and/or distribution directly to clients. Different groups of clients may receive different products and services from the research department depending on their individual requirements.

Figures presented herein may refer to past performance or simulations based on past performance which are not reliable indicators of future or likely performance. Where the information contains an expectation, projection or indication of future performance and business prospects, such forecasts may not be a reliable indicator of future or likely performance. Moreover, simulations are based on models and simplifying assumptions which may oversimplify and not reflect the future distribution of returns. Any figure, strategy or index created and published for illustrative purposes within this document is not intended for “use” as a “benchmark” as defined by the European Benchmark Regulation.

Certain securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of, or income derived from, the investment.

With respect to Fixed Income Research: Recommendations fall into two categories: tactical, which typically last up to three months; or strategic, which typically last from 6-12 months. However, trade recommendations may be reviewed at any time as circumstances change. ‘Stop loss’ levels for trades are also provided; which, if hit, closes the trade recommendation automatically. Prices and yields shown in recommendations are taken at the time of submission for publication and are based on either indicative Bloomberg, LSEG or Nomura prices and yields at that time. The prices and yields shown are not necessarily those at which the trade recommendation can be implemented.

The securities described herein may not have been registered under the US Securities Act of 1933 (the ‘1933 Act’), and, in such case, may not be offered or sold in the US or to US persons unless they have been registered under the 1933 Act, or except in compliance with an exemption from the registration requirements of the 1933 Act. Unless governing law permits otherwise, any transaction should be executed via a Nomura entity in your home jurisdiction.

This document has been approved for distribution in the UK as investment research by NIplc. NIplc is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. NIplc is a member of the London Stock Exchange. This document does not constitute a personal recommendation within the meaning of applicable regulations in the UK, or take into account the particular investment objectives, financial situations, or needs of individual investors. This document is intended only for investors who are 'eligible counterparties' or 'professional clients' for the purposes of applicable regulations in the UK, and may not, therefore, be redistributed to persons who are 'retail clients' for such purposes.

This document has been approved for distribution in the European Economic Area as investment research by Nomura Financial Products Europe GmbH (“NFPE”). NFPE is a company organized as a limited liability company under German law registered in the Commercial Register of the Court of Frankfurt/Main under HRB 110223. NFPE is authorized and regulated by the German Federal Financial Supervisory Authority (BaFin).

This document has been approved by NIHK, which is regulated by the Hong Kong Securities and Futures Commission, for distribution in Hong Kong by NIHK. This document is intended only for investors who are 'professional investors' for the purposes of applicable regulations in Hong Kong and may not, therefore, be redistributed to persons who are not 'professional investors' for such purposes.

This document has been approved for distribution in Australia by NAL, which is authorized and regulated in Australia by the ASIC.

This document has also been approved for distribution in Malaysia by NSM.

In Singapore, this document has been distributed by NSL, an exempt financial adviser as defined under the Financial Advisers Act (Chapter 110), among other things, and regulated by the Monetary Authority of Singapore. NSL may distribute this document produced by its foreign affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. This document is intended for accredited, expert or institutional investors as defined by the Securities and Futures Act (Chapter 289). Where the recipient of this document is not an accredited, expert or institutional investor, NSL accepts legal responsibility for the contents of this document in respect of such recipient only to the extent required by law. Recipients of this document in Singapore should contact NSL in respect of matters arising from, or in connection with, this document. THIS DOCUMENT IS INTENDED FOR GENERAL CIRCULATION. IT DOES NOT TAKE INTO ACCOUNT THE SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS OF ANY PARTICULAR PERSON. RECIPIENTS SHOULD TAKE INTO ACCOUNT THEIR SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS BEFORE MAKING A COMMITMENT TO PURCHASE ANY SECURITIES, INCLUDING SEEKING ADVICE FROM AN INDEPENDENT FINANCIAL ADVISER REGARDING THE SUITABILITY OF THE INVESTMENT, UNDER A SEPARATE ENGAGEMENT, AS THE RECIPIENT DEEMS FIT.

Unless prohibited by the provisions of Regulation S of the 1933 Act, this material is distributed in the US, by NSI, a US-registered broker-dealer, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6, under the US Securities Exchange Act of 1934. The entity that prepared this document permits its separately operated affiliates within the Nomura Group to make copies of such documents available to their clients.

This document has not been approved for distribution to persons other than ‘Authorised Persons’, ‘Exempt Persons’ or ‘Institutions’ (as defined by the Capital Markets Authority) in the Kingdom of Saudi Arabia (‘Saudi Arabia’) or a ’Market Counterparty’ or a 'Professional Client' (as defined by the Dubai Financial Services Authority) in the United Arab Emirates (‘UAE’) or a ‘Market Counterparty’ or a ‘Business Customer’ (as defined by the Qatar Financial Centre Regulatory Authority) in the State of Qatar (‘Qatar’) by Nomura Saudi Arabia, NIplc or any other member of the Nomura Group, as the case may be. Neither this document nor any copy thereof may be taken or transmitted or distributed, directly or indirectly, by any person other than those authorised to do so into Saudi Arabia or in the UAE or in Qatar or to any person other than ‘Authorised Persons’, ‘Exempt Persons’ or ‘Institutions’ located in Saudi Arabia or a ’Market Counterparty’ or a 'Professional Client' in the UAE or a ‘Market Counterparty’ or a ‘Business Customer’ in Qatar. Any failure to comply with these restrictions may constitute a violation of the laws of the UAE or Saudi Arabia or Qatar.
