GLOBAL RATES TRADER

Rates Running Out of Patience

Supply-side volatility and uncertainty around the conflict continue to challenge global duration's usefulness. The introduction of some inflation risk into the UST curve—a feature that was absent earlier in the shock—and optimism priced into macro markets improve the value of duration as a medium-term hedge against the deeper downside tails. But with any near-term rally likely gradual in a benign deescalation scenario, or reliant first on a more adverse outcome for energy prices from the conflict that reignites growth concerns, we continue to see value to structures that limit downside in further selloffs. European front-end rates remain under pressure as no news on Strait of Hormuz flows weakens the case for longs. While we continue to recommend long EGBs vs OIS, we are tightening stops after recent spread tightening. Gilt risk premium emerged amid the late week global selloff after relative stability during the earlier increase in political uncertainty, potentially reflecting the already-elevated levels of UK risk premium. We think inflation and monetary policy outcomes will have the decisive impact on Gilt yields this year, with lower 10y yields likely to be driven by a lower policy path—for this reason we continue to favor front-end longs vs belly underweights.

United States and Canada

- **Peer pressures.** The break above 4.5% 10y and 5.0% 30y US yields has come against a backdrop of higher yields globally, with UK, Japan, and German long-end yields trending steadily higher—compared to the last time UST 30y yields exceeded 5% in 3Q25, the average of UK, Japan, and German 30s has risen about 50bp (Exhibit 1). Our estimate of global spillovers suggests that the year-to-date selloff in USTs has largely reflected bearish shocks from the UK and Japan. We are hesitant to write off domestic impulses entirely though, as the pairing of growth optimism and inflation upside risks have converged to erode market conviction in the likelihood of Fed cuts—a building sense of on hold (or higher) for longer front-end yields should shift the perception of what level offers attractive value further out the curve as well. Instead, we would interpret the global nature of the bearish pressure as underscoring the near-term challenges to achieving lasting relief without a shift in the macro picture—despite idiosyncratic factors, the paths to a meaningful rally in the UK and Japan hinge primarily on outcomes that either restore conviction in the path towards lower policy rates (for the UK) or validate the gradual approach to tightening (for

Japan).

- **An uneasy introduction of value.** Treasuries have been a poor diversifier since the end of February—the one-month rolling correlation between 10y UST yield changes and equity returns reached its most negative in multiple decades (Exhibit 2). Continued uncertainty around the Iran conflict and supply shock remains an impediment to nominal duration's ability to dampen day-to-day portfolio volatility, which can sustain greater risk premium in the short term. However, the broader trends of growth optimism priced into risk markets and clearer build-up of inflation risk premia along the yield curve (more below) improves the value proposition of Treasuries as a medium-term hedge. Given the possibility that it takes a more acute spike in energy prices to reopen growth worries in the short term, we think expressions that lean bullish while limiting exposure to additional selloffs are a prudent implementation for now and would look either for deeper selloffs that more durably challenge the risk asset trend, or credible relief and a return of energy flows as catalysts to add to long duration exposure.

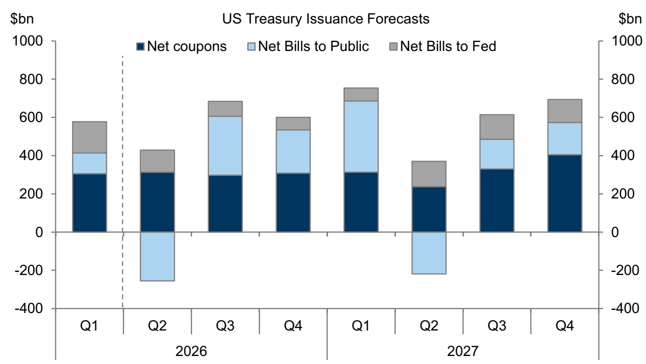
- **Easier funding costs lead stepdown in RMPs.** The New York Fed announced a reduction in the pace of RMPs from $25bn to $10bn over the coming month, having slowed from $40bn a month earlier. We previously argued that there was scope for a further reduction in the pace of purchases given recent funding market stability despite system-wide liquidity dipping to cycle lows relative to bank assets, and think the further easing in funding costs in recent weeks likely prompted the larger deceleration in RMPs. While the decline in overnight rates reflects a genuine moderation in the drivers of last year's funding volatility that we think is consistent with a leftward shift in the reserve demand curve, temporary factors have contributed to the recent decline in overnight rates. Net negative Treasury bill issuance alongside Fed RMPs took bill supply to a trough in early May, and although tax payments pulled liquidity from the system temporarily, the nearly $300bn decline in the TGA from the April peak has boosted reserves, leaving short-end collateral supply at a local low and system-wide liquidity around a local high. While those factors should moderate as bill issuance turns positive and the TGA rebuilds, assuming the Fed aims for triparty repo rates close to but modestly below IORB in the steady state, we think that RMPs could slow further. We estimate that reserves stabilizing modestly around 11% of bank assets should be consistent with TGCR averaging modestly below IORB; assuming both bank asset and currency grow with trend nominal GDP, we assume RMPs of $5bn per month and remain there to 1Q27, at which point reserves should be a bit above 11% of bank assets (beyond then we assume a return to a more trend-like pace of about $25bn/mo in balance sheet growth absent other shifts). We would not rule out a period of zero growth in reserves, but continue to think there is a high bar to a lasting return to runoff given growth in currency, bank assets, and the TGA, as well as uncertainty around precisely where the steep part of the demand curve sits and the risks that arise from more rapidly draining liquidity.

- **Inflation forwards catching up to oil, and AI costs.** Having lagged oil prices during most of the early part of the conflict (likely for multiple reasons, see here and here), inflation forwards recently have caught up with the general reset higher in yields and front-end inflation pricing. While the economic rationale for pricing persistently higher inflation over the coming years on the current supply shock is weak, particularly given the labor market backdrop, a return of supply-side volatility and the sanguine growth tone in markets both argue for more risk premium through the inflation curve. Our commodities analysts have noted that storage drawdowns and demand destruction have partially buffered the positive impact to energy prices, but inventory drawdowns risk reaching limits around summer should the Hormuz disruption last beyond June, likely requiring higher prices to incentivize further demand destruction. We also saw the clearest evidence in US data so far that higher costs from the AI-buildout phase can push inflation up initially (our economists estimate roughly half a percentage point boost to PPI from AI, but see mainly measurement errors at play for core PCE), before the productivity gains can lead to disinflation eventually. But with inflation forwards less cheap following the repricing (Exhibit 4), we now see a less clear case for using inflation longs as a hedge, and view risks as more two-sided, given risks of a slight pullback from the anticipatory growth optimism.

- **BoC minutes confirm dovish bias; steeper 2s5s.** Canadian yields reset higher with rates globally over the past week as the conflict and energy shock drags on. While global shifts remain a headwind to longs, we continue to expect a more dovish than priced BoC path given expected inflation follow through and a weaker labor market. Reinforcing our bias to a steeper curve, the BoC minutes this week again emphasized the “scope to be patient” and ability “to look through the shock.” We thought the most notable takeaway was the unambiguously dovish characterization of trade risks. We see scope for focus to return to downside growth risks as the USMCA deadline approaches, and for hike premium to decay provided inflation stays along the BoC’s forecasts. That said, while cross-market longs have been popular, we view levels as less compelling from here, and the recent pickup in open interest in CORRA futures suggests some positioning risk. Given the better insulation to still-higher oil prices we still prefer 2s5s steepeners over outright longs. On a more technical note, CORRA recently printed lower again, following a pocket of pressure in April amid a local low in repo liquidity. But with a looming bond maturity that would drain about 11% of settlement balances, we think there is a case for BoC to provide greater clarity about the balance sheet approach; one possible shift could be to lay out the target range as a share of bank assets (which have grown about 4% since the 50-70bn target range was laid out last year) rather than a fixed level.

Exhibit 3: Bill supply should return to positive territory over the coming quarters, with the Fed also likely buying at a slower pace for now



Assumes RMPs slow to $5bn/mo from next month through 1Q27

Europe

- **No news puts a floor on EUR front-end rates**. An absence of positive news on commodity flows via the SoH, tends to see EUR yields and HICP pricing drift higher. We have argued that forward HICP is now close to fair value (Exhibit 5), and this suggests the market is pricing a reasonable degree of passthrough from headline to core inflation. This makes risk reward more balanced in the European front-end, but Z6 and front-end curve slope will still be subject to shifts in oil prices. We still see a high hurdle for substantial tightening (100bp or more) and so front-end volatility remains too high relative to the plausible policy outcomes. Next week's flash PMIs will offer clues to the growth outlook, but price components will also be a key part of the release. We continue to favour sovereign credit carry, and continue to recommend IT, ES, FR longs vs OIS. But following strong performance over the last month, we tighten stops to 0.32.

Source: Goldman Sachs Global Investment Research, BoE, OBR

- **Delayed reaction in Gilt premium.** Despite an increase in political uncertainty on Monday and Tuesday, it took a global sell-off to shift Gilt risk premium higher late in the week. The UK curve steepened and our FX strategists' proxy for the political risk premium in Sterling — the gap between actual and GSBEER model-implied EUR/GBP performance — has risen. But overall, stress on UK assets has been more modest than in recent comparable periods. Our measure of the term premium also remains contained, and when we apply our spillover framework to the term premium, we find that the UK has not been contributing to upward pressure on global rates until very recently (Exhibit 7). This is consistent with the stability up until this week in Gilt swap spreads and 10s30s curve vs other G4 markets since last year's budget. Although political uncertainty will keep the market focused on fiscal policy, it is possible that some of the drivers of UK term premium, namely BoE QT and the rise in duration-adjusted free float, have started to moderate. That said, we expect relief to come from the front-end of the Gilt curve vs the belly, where the term premium will remain stable but sticky.
- **Only a little help from higher T-bill issuance.** With the UK fiscal outlook in focus this week, we also assessed the likely implications of a higher resort to T-bill issuance by the UK DMO, as a result of its recent consultation. We find that raising the T-bill share to around 10% (roughly the G10 average) would save about £3bn annually in interest costs. But such an improvement needs to be weighed against the risk of fuelling funding volatility, at a moment when revisions in interest costs as part of the OBR budget forecasts are already significant, amounting to £10bn on average since 2021 (Exhibit 6). An interesting possibility is that a shift to T-bill issuance for debt management (as opposed to cash management) may see greater demand for UK securities. We argue that demand from banks, households, and reserve managers is relevant here, though it is likely to hinge on the regulatory environment, availability of alternatives (tax-free ISA accounts), and broader impulse for diversification in reserve currencies respectively. Against this, we see modest implications for UK rates overall. We think that a higher bill share can reinforce recent performance of

long-end Gilts vs swaps by reducing further issuance there, but that the clearest path for a reduction in Gilt term premium is through greater confidence on low and stable inflation.

Exhibit 7: Decomposing G4 term premia shows that UK spillovers have only recently began contributing to global upward pressure

Japan

- **BOJ QT likely to stay the course.** The BoJ will release its quarterly bond market survey this upcoming week, ahead of the bond market group meetings on May 21 and 22. At these meetings, the BoJ seeks market participants' views on the pace of QT. This feedback will be a key input for the Bank's balance sheet policy review at the June monetary policy meeting and help inform any potential changes. During its previous review of balance sheet policy at the June 2025 MPM, the BoJ noted that "in the case of a rapid rise in long-term interest rates, the Bank will make nimble responses by, for example, increasing the amount of JGB purchases." Despite a sizable increase in long-term rates since then, the pace of QT has proceeded as planned. Most recently, in April, the BoJ implemented its scheduled moderation of purchase reductions from ¥400bn to ¥200bn per quarter. With funding markets showing no obvious signs of volatility and swap spreads relatively flat on the year, our economists do not anticipate a change to the QT path in June. Further, while a shift could provide some relief along the supply/demand dimension specifically, it would not address the main source of JGB volatility this year, which we think reflects domestic macro risks stemming in part from the BOJ's gradual approach to rate hikes.

We, George Cole, William Marshall, Simon Freycenet, Isabella Rosenberg, Friedrich Schaper and Loic Mathys, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Contributing Authors: George Cole Goldman Sachs International, William Marshall Goldman Sachs & Co. LLC, Simon Freycenet Goldman Sachs Bank Europe SE - Paris Branch, Isabella Rosenberg Goldman Sachs & Co. LLC, Friedrich Schaper Goldman Sachs & Co. LLC, Loic Mathys Goldman Sachs International.

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Option Specific Disclosures

Price target methodology: Please refer to the analyst's previously published research for methodology and risks associated with equity price targets.

Pricing Disclosure: Option prices and volatility levels in this note are indicative only, and are based on our estimates of recent mid-market levels (unless otherwise noted). All prices and levels exclude transaction costs unless otherwise stated.

General Options Risks – The risks below and any other options risks mentioned in this research report pertain both to specific derivative trade recommendations mentioned and to discussion of general opportunities and advantages of derivative strategies. Unless otherwise noted, options strategies mentioned in this report may be a combination of the strategies below and therefore carry with them the risks of those strategies.

Buying Options – Investors who buy call (put) options risk loss of the entire premium paid if the underlying security finishes below (above) the strike price at expiration. Investors who buy call or put spreads also risk a maximum loss of the premium paid. The maximum gain on a long call or put spread is the difference between the strike prices, less the premium paid.

Selling Options – Investors who sell calls on securities they do not own risk unlimited loss of the security price less the strike price. Investors who sell covered calls (sell calls while owning the underlying security) risk having to deliver the underlying security or pay the difference between the security price and the strike price, depending on whether the option is settled by physical delivery or cash-settled. Investors who sell puts risk loss of the strike price less the premium received for selling the put. Investors who sell put or call spreads risk a maximum loss of the difference between the strikes less the premium received, while their maximum gain is the premium received.

For options settled by physical delivery, the above risks assume the options buyer or seller, buys or sells the resulting securities at the settlement price on expiry.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details can be found at: https://www.goldmansachs.com/worldwide/india/documents/Grievance-Redressal-and-Escalation-Matrix.pdf, and a copy of the annual audit compliance report can be found at this link: https://publishing.gs.com/content/site/india-annual-compliance-report.html. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
