Our regular web metric updates over the last few quarters showed exceptionally strong demand signals — arguably the strongest since COVID. The strength has translated into reported results, with revenue growth acceleration in AWS as AI workloads slowly ramped, and cloud consumption linked names like Datadog, Snowflake, and Cloudflare. That said, we want to flag a trend that we are watching closely: **growth flattened unusually over the last four weeks (+ start of this week) relative to the pattern seen over the prior three years** (Exhibit 2). Reminder: this is alt data with good historic fit, but for a variety of reasons it could stop being predictive. Fundamental explanation remains important.

Limited Q2 revenue impact expected. It is important to remember that our data effectively operates on a one-quarter lead relative to reported financials. What we are measuring is closer to incremental ARR added in the quarter, whereas reported results reflect postpaid billing and revenue recognition from existing ARR. As a result, Q2 revenue should largely reflect the strength we saw in Q1 web metric signal (Exhibit 1) **— we think Q2 could show another 100 bps acceleration.**

Q3 non-AI revenue impact likely limited. Q2 started strong, so if the recent implied weakness reverses in June, Q3 would still have a "normal" Q/Q growth. Note there may be a modest mathematical Y/Y headwind to non-AI growth as Q3'25 was strong.

Q4 could be an issue. Where the setup becomes more challenging is if the current flattening persists into Q3 web metric data. **If the trend remains subdued, the result would be a pronounced Y/Y growth headwind to non-AI consumption in Q4.**

What's driving the softness. We asked leaders of top software companies, large growth software PE portfolios, as well as consultants working with enterprise buyers and **the common thesis we heard: hyperscalers are running into capacity constraints with incremental compute heavily allocated toward frontier AI labs,** leaving less available supply for other buyers (e.g., enterprises, software vendors). More narrowly, from a very deeply integrated source within product team buyers **a couple added thesis emerged: 1) Mythos induced cyber urgency** creates a HUGE backlog of issues to address. Companies are sprinting to do this, as opposed to working on next incremental new workload. **2) tokenmaxxing hangover** as some product teams attempt to moderate spending growth on coding agents and AI copilots. After a period of rapid adoption, there is some effort to reset and impose discipline.

Regardless of the driver, the shift is notable and raises a warning signal that we will keep watching. A softer consumption backdrop in Q3+ could impact demand from traditional enterprise buyers and cloud software vendors, while less problematic for the "Born-in-AI" cohort (i.e., AI-linked trajectory for AWS and Datadog).

Could AWS benefit? In practice, supply constraints point to a more competitive environment for securing capacity to bring new workloads into production, which could give AWS pricing leverage. Similarly, if available capacity has shifted towards higher margin AI workloads, then AWS may also find its financials in a better position.

INVESTMENT IMPLICATIONS

No change to models, price targets, or recommendations.

Amazon: we maintain our Outperform rating and $315 PT.

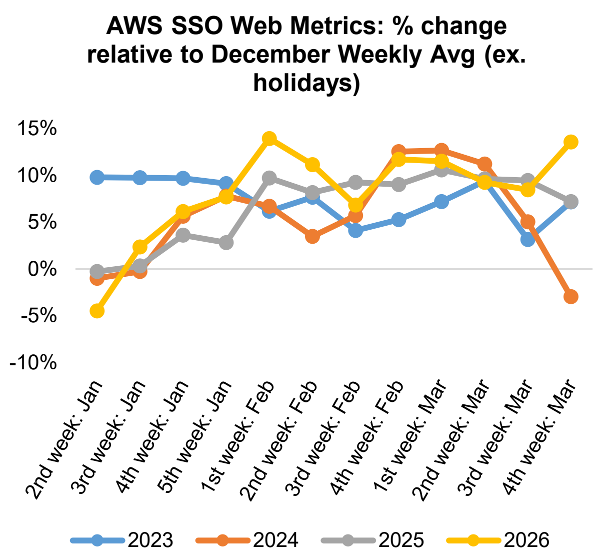
Datadog: we maintain our Outperform rating and $180 PT.

Twilio: we maintain our Market-Perform rating and $183 PT.

Cloudflare: we maintain our Market-Perform rating and $136 PT.

DETAILS

EXHIBIT 1: **2026 had a strong start with the AWS web metric data accelerating in January and maintaining the strong level throughout Q1.**



Source: Similarweb, Bernstein analysis

EXHIBIT 2: **The strong acceleration continued in early Q2 with the web metric data performing better than the prior 3 years until the first week of May. But the trend flatlined in May, underperforming the trends we saw in 2023 and 2024.**

WHY DO WE CARE ABOUT AWS WEB METRICS DATA

SSO DATA SERVES AS A LEADING INDICATOR FOR AWS EX-AI REVENUE

As we have shared over the past few years, we have observed a strong correlation between -1 quarter (last quarter) engagement with AWS' single-sign-on ("SSO") page and current quarter revenue growth for AWS. This makes sense as the amount of human interaction with the SSO can't really oscillate that much due to personal work preference, and instead it more likely represents the portion of people actually tasked with doing projects on AWS. And because the amount of work any individual person can do (and is expected to deliver) remains pretty consistent over time, and their work turns into similar amount of revenue (with some curvature created by issues such as changing list prices and productivity, that can be adjusted for), then the volume of people will translate through the SSO volume into consumption volumes.

However, that level of human work comes before the revenue is observed. Why does this make sense? Their work turns into consumption, which gets more fully realized in the following period (between the ramp-up of their projects and usage, and timing within the quarter not providing full-quarter usage). Our data is available daily, so we've tested a variety of time-shifts, and find the highest correlation is ~1 quarter. Thus, the level of human engagement with the SSO last quarter is a leading indicator of revenue recognition changes in the current quarter.

But the engagement levels alone still have variation to fit. Over time, AWS changes its rate cards, offers credits, sees rationalization (that changes consumption per person), and even has sales behaviors that can pull forward some level of revenue. We try to adjust for these variations and look at the regression only for the "base" AWS revenue.

REMINDER: ALT DATA MAY DISCONNECT FOR A VARIETY OF REASONS, EVEN WITH GOOD HISTORIC FIT.

We have seen the data gyrate for short periods of time in the past. We had not brought up this deviation until now, given this reality. But at 4+ weeks of weakness it seems more likely a trend. With that said many things could go wrong on this readthrough. For instance the vendor itself has even occasionally changed their collection methodology creating weirdness during a transition period. We are most interested when a fundamental explanation supports the data. We are continuing to gather data points that could refute (or further confirm) if the trend readthrough makes sense and is predictive of future financial results.

VALUATION METHODOLOGY

Amazon.Com Inc

We value Amazon on a Price Target of $315 using a 50/50 combination of SOTP method which values Amazon's largest segment (Retail) at a 2027E EV/Sales multiple of 3x, and a DCF using a WACC of 9% and a terminal growth rate of 3.5%.

Datadog Inc

Our price target of $180 is an average of DCF (with 11% WACC and 3% terminal growth) and P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple of 14x is based on a peer-SaaS regression in their relevant >10% OpM Cloud SaaS cohort from our "Rule-of-40" based valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

Twilio Inc

Our target price of $183 is a 50/50 average of DCF (with 11% WACC and 3% terminal growth) and P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple of 4.5x is based on a peer-SaaS regression in their relevant OpM Cloud SaaS cohort from our "Rule-of-40" based valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

Cloudflare Inc

Our price target of $136 is an average of DCF (with 10% WACC and 3% terminal growth) and 16x P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple is selected in the 10%+ OpM Cloud SaaS cohort from our valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

RISKS

Amazon.Com Inc

Downside risks to our price target:
• Amazon is currently under investigation in multiple regulatory proceedings across both anti-trust and privacy, domestically and abroad. Any regulations or actions by either the FTC, DOJ, or EU agencies could negatively impact the company's financials and valuation.
• New investments such as Groceries, Healthcare, AI, and Other Bets could result in a new investment cycle resulting in elevated capital intensity, compressing operating margins, and lower FCF.
• Share loss across core businesses from new eCommerce entrants and main AWS competitors could derate the multiples associated with both core businesses

Datadog Inc

Downside risks beyond the macroeconomic risks include: increased competition from well-funded competitors in the industry; margin expansion slower than expected due to worse scale leverage in operating costs items; execution missteps or missed earnings expectations could lead to significant downside given the current valuation.

Twilio Inc

Downside risks beyond the macroeconomic risks include: slow down in future synergetic M&A activities; slow down in overall growth in CPaaS sector, particularly from customer base that is exposed to retail consumption; increased competition from well-funded competitors in the industry; execution missteps or missed earnings expectations could lead to significant downside given the current valuation.

Upside risk beyond the macroeconomic risks include: better than expected unit economics from scale leverage; competitors in the industry fail to catch up with Twilio's offering.

Cloudflare Inc

Downside risks beyond the macroeconomic risks include: continued tie to cloud growth, execution risk in sales model transformation; less visibility in consumption and revenue predictability; building credible Act II / III products and demonstrating demand, hyperscalers moving into their core CDN and expansion security businesses, high valuation.

Upside risks include AI driving demand for their edge PaaS, and success selling a broader cybersecurity platform either of both of which exceed revenue expectations.

RATINGS DEFINITIONS, BENCHMARKS AND DISTRIBUTION

EQUITY RATINGS DEFINITIONS

Bernstein brand

The Bernstein brand rates stocks based on forecasts of relative performance for the next 12 months versus the S&P 500 for stocks listed on the U.S. and Canadian exchanges, versus the Bloomberg Europe Developed Markets Large and Mid Cap Price Return Index EUR (EDME) for stocks listed on the European exchanges and emerging markets exchanges outside of the Asia Pacific region, versus the Bloomberg Japan Large and Mid Cap Price Return Index USD (JPL) for stocks listed on the Japanese exchanges, and versus the Bloomberg Asia ex-Japan Large and Mid Cap Price Return Index (ASIAX) for stocks listed on the Asian (ex-Japan) exchanges -unless otherwise specified.

The Bernstein brand has three categories of ratings:

- Outperform: Stock will outpace the market index by more than 15 pp
- Market-Perform: Stock will perform in line with the market index to within +/-15 pp
- Underperform: Stock will trail the performance of the market index by more than 15 pp

Coverage Suspended: Coverage of a company under the Bernstein research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Not Covered (NC) denotes companies that are not under coverage.

Bernstein brand stock ratings are based on a 12-month time horizon.

Autonomous brand – common stocks

The Autonomous brand rates common stocks as indicated below. As our benchmarks we use the Bloomberg Europe 500 Banks And Financial Services Index (BEBANKS) and Bloomberg Europe Dev Mkt Financials Large and Mid Cap Price Ret Index EUR (EDMFI) index for developed European banks and Payments, the Bloomberg Europe 500 Insurance Index (BEINSUR) for European insurers, the S&P 500 and S&P Financials for US banks and Payments coverage, S5LIFE for US Insurance, the S&P Insurance Select Industry (SPSIINS) for US Non-Life Insurers coverage, and the Bloomberg Emerging Markets Financials Large, Mid and Small Cap Price Return Index (EMLSF) for emerging market banks and insurers and Payments. Ratings are stated relative to the sector (not the market).

The Autonomous brand has three categories of common stock ratings:

- Outperform (OP): Stock will outpace the relevant index by more than 10 pp
- Neutral (N): Stock will perform in line with the market index to within +/-10 pp
- Underperform (UP): Stock will trail the performance of the relevant index by more than 10 pp

Coverage Suspended: Coverage of a company under the Autonomous research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Those denoted as ‘Feature’ (e.g., Feature Outperform FOP, Feature Under Outperform FUP) are our core ideas.

Not Covered (NC) denotes companies that are not under coverage.

Autonomous brand common stock ratings are based on a 12-month time horizon.
