24 July 2026

Siemens Energy AG (ENR GR)

Buy: Cyclical support amid cautious market mood

Equities
Energy Equipment & Services

Germany

- Expected rise in GW commitments for GS in H2 underlines ongoing market backdrop strength for gas turbines
- Structural drivers for GT look robust and Gamesa's march towards profitability in H2 can provide relief
- Lift TP to EUR205 (from EUR190) on higher peer multiple and estimates; weak share price run helps derisk Q3 results

An eventful Q3 results in store

With shares -19% since 24 April 2026 highs (vs. FTSE World Industrials +1%), we believe upcoming Q3 FY26 results for Siemens Energy (ENR) on 5 August are to an extent derisked. We see potential for further guidance increases, particularly on FCF, given the strong demand backdrop.

Gas Services (GS): debate is about the cycle

Judging from Q2-26 results from main peer GE Vernova (GEV US, USD985.03, TP USD1,040, Hold), the key debates in gas power are around the pace of turbine order growth in H2-26 and 2027 and demand-supply balance in 2030 and beyond (see *Q2 earnings miss with cyclical reassurance*, 23 July 2026). Both GEV and ENR have indicated further growth in overall GW commitments (ENR to 90-100GW by FY26 and GEV to 125GW by YE-26) with pace of conversion of slot reservation agreements (SRA) driving strong firm backlog growth (see p. 3). ENR sees strong market demand in Q3 FY26 and expects a strong start to FY27 after a weaker Q4, based on a 110-120GW sustained annual market for gas turbines (including combined-cycle) for the coming years. This contrasts with more conservative guidance from MHI (7011 JT, JPY3,892, n/c) issued in May of falling y-o-y orders and 70-100GW of global demand for gas turbines in 2026.

Grid Technologies (GT): a more structural story

We see more resilient order intake for grid equipment, driven by broader electrification trends and refurbishment / expansion needs for legacy grids. High market growth is driving positive pricing in US, with pricing more stable in Europe.

Siemens Gamesa: inching towards profitability in H2

We expect Gamesa to reach profitability in H2 FY26 after years of losses (see p. 3) thanks to high volume deliveries in offshore. We note a wider debate about offshore delivery fading in 2028-29 from current high levels but believe that rising auction volumes and better visibility post 2030 in Europe can allay shorter-term headwinds.

Maintain Buy and raise TP to EUR205 from EUR190

We marginally adjust top-line estimates and our more positive view of margin growth for GT and GS to FY28 leads to an overall 10-30bps margin increase in FY26e/28e. Based on an unchanged 15% discount to GEV's 2028e EV/EBITDA multiple, we derive a new TP of EUR205 (up from EUR190). With implied upside of 35%, we retain Buy on ENR.

Source: Company data, HSBC estimates and calculations, Visible Alpha consensus

Investment thesis: Our Buy rating on Siemens Energy is based on the following factors:

1) It is a leading supplier of equipment and services across the global energy sector, benefiting from optionality on multiple future energy opportunities that we consider to be attractively valued.

2) We believe there is a solid outlook for ENR's core business (ex-Siemens Gamesa). Gas Services (GS) continues to deliver high-margin recurring revenue streams and benefits from a demand rebound for new gas-fired power equipment. Grid Technologies (GT) stands to benefit from the rising urgency for new power transmission infrastructure, driven by the global acceleration in electrification trends and renewables installations. We expect SE's Transformation of Industries division to also benefit in the medium term from industrial decarbonisation trends.

3) Execution of the turnaround plan at Siemens Gamesa (SG), targeting breakeven by end-2026 once all onshore turbine quality issues have been addressed successfully and with a simpler turbine portfolio and a leaner structure; this should drive greater confidence in long-term earnings growth. We note that according to the company, turbine interventions to address quality issues are so far progressing to plan and onshore market re-entry is not core to 2026 ambitions.

4) We expect returns to shareholders. As such, the announcement of a EUR0.70 dividend per share for 2025 is a positive start for shareholder returns, in our view, this is further bolstered by increase of FY26 buyback volume.

Siemens Energy: Changes to estimates

In this report, we marginally adjust our top-line estimates, as we update our FX estimates, and also update the comparable revenue growth assumptions based on revised guidance. Upgraded guidance of FY26 also lead to our more positive view of the margin progression of Grid Technologies business, which leads to an overall margin increase by 10-30bps for FY26e/28e. Our higher assumption of tax in FY26e leads to reduction in net profit by 11% in FY26e.

Valuation and risks

Siemens Energy ENR GR

Buy

Current price: **EUR152.32**

Target price: **EUR205.00**

Up/downside: **+34.59%**

Valuation

Methodology: We value ENR on an EV/EBITDA multiple, at a discount to its closest peer GEV (GEV US, CMP USD985.03, Hold).

Assumptions: We use a 2028e forward EV/EBITDA multiple to value ENR. We value ENR at 16.9x (from 16.3x) EV/EBITDA, which is a 15% discount to GEV's three-year forward consensus multiple of 19.9x (from 19.1x). We divide our EV by 861m shares to derive a per share estimate of EUR195.7 (from EUR181.9). We apply a reconciliation line adjustment of -EUR1.4 per share based on a 10x multiple. Finally, we add net cash of EUR8.80 per share at the end of 2QFY26 (unchanged).

These adjustments give a fair value of EUR203.12 (from EUR189.39) per share, which we round up to derive our target price of EUR205.00 (from EUR190.00), which implies c35% upside. We therefore maintain our Buy rating. Although SG's execution remains a concern, we see ongoing demand strength in grid, a valuation discount to closest peer GEV, and a credible turnaround plan at SG as potential upside drivers.

Risks to our view

Downside risks: (1) New quality issues with wind turbines driving higher-than-expected provisioning costs; (2) further offshore wind ramp-up delays; (3) peak demand for grid equipment; (4) project execution-related risk on previously committed fossil fuel-based projects; (5) longer-than-expected timelines and costs for capacity ramp-up in GS and GT, including potential component supply shortages; and (6) intensification of competitive pressures in alternative energy.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

From 23rd March 2015 HSBC has assigned ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Prior to this date, HSBC's rating structure was applied on the following basis:

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

Rating distribution for long-term investment opportunities

As of 30 June 2026, the distribution of all independent ratings published by HSBC is as follows:

Buy	61%	(13% of these provided with Investment Banking Services in the past 12 months)
Hold	34%	(10% of these provided with Investment Banking Services in the past 12 months)
Sell	5%	(8% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at *http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures*.
