Goldman Sachs Australia Pty Ltd

Following GMD's 6-Jul proposal, and RRL electing not to match the offer, GMD and VAU have agreed to merge via a Scheme of Arrangement, with implementation targeted Oct/Nov-26. GMD reaffirmed the strategic rationale, though a strategic review and new plan is targeted for 1H CY27 to better outline a combined outlook, including production uplifts/LoM extensions, capex savings, mine plan optimisations, and potential non-core divestments. GMD noted they will also provide some FY27 guidance with the upcoming quarterly result.

We conduct an illustrative scenario analysis to assess the outlook for a MergeCo scenario vs. our assumptions around GMD's baseline ASPIRE 500 plan on our bottom up mine/mill/cost modeling within, all else equal. We see the merger as potentially accretive, with **MergeCo lifting gold production by ~30-80kozpa to ~690-780kozpa over FY27-28E** vs. a pro forma of our baseline GMD/VAU outlooks with a **~10% lower AISC of ~A$2,850/oz,** with an **EBITDA lift of ~15-25%** over the same period (before any mine plan/cost optimisation). On a 10yr outlook, we see aggregate production broadly similar vs. the pro forma despite not having the Tower Hill mill/deferred Laverton mill expansion, while longer-term production declines may be deferred with LoM extension enabled by enhanced exploration spend medium-term.

Together with a more capital-light MergeCo pathway by avoiding construction of a mill at Tower Hill (and the associated capex/timing risks in the current project environment; See our buy vs. build analysis), and a ~1-2yr deferral of Laverton capacity expansion (with Hub/Bruno-Lewis/Admiral material processed through the KoTH mill adding incremental ounces vs. GMD's target and liberating capacity at Laverton), **our analysis implies operating FCF yields increasing +5-10% to ~10-15% on average near-term with scope for growing capital returns** (average ~4-5% DPS yield) from a further strengthened balance sheet/lowered cost of capital.

We reinstate ratings on GMD to Buy (~30% upside), **Neutral on RRL (~15% upside),** and remain **Not Rated on VAU**. Though we have historically been more cautious on GMD's outlook, we now see reasonable upside to our revised estimates (including further elevated capex), with the standalone business on our ASPIRE 500 outlook trading ~0.8x NAV. Separately, under our MergeCo scenario, we see the potential for the business to be more defensively positioned for ongoing gold price volatility, while trading at ~0.75x NAV or pricing ~US$3,190/oz.

High level merger summary

Following the 6-Jul proposal from Genesis Minerals (GMD.AX) to merge with Vault Minerals (VAU), and the subsequent expiration of Regis Resources' (RRL.AX) exclusive matching period, GMD and VAU have now agreed to merge via a Scheme of Arrangement, under which GMD will acquire 100% of the fully paid ordinary shares in VAU. The consideration remains unchanged from the initial proposal, with VAU shareholders to receive 0.7629 new fully paid ordinary shares in GMD plus A$0.475 in cash for each VAU share held (a cash/scrip mix with a mix-and-match facility, subject to the aggregate ~A$500mn cash and ~803.4mn GMD shares on offer). Based on GMD's closing share price of A$6.29/sh on the 3rd of July 2026 (being the last close prior to GMD's initial proposal), the offer values VAU at ~A$5.274/sh (~A$5.6bn fully diluted equity value), representing a ~15.7% premium to VAU's close price on the 3rd of July 2026, where upon Scheme Implementation, GMD/VAU shareholders would own ~59.8%/~40.2% of the combined entity respectively (fully diluted).

GMD have reaffirmed the strategic rationale, where the merger remains intended to create a new Australian gold major anchored in the Tier 1 Leonora-Laverton district. GMD expects MergeCo to have an **immediate pro forma production of 600-700kozpa pre-optimisation** (all 100%-owned in WA), underpinned by ~400-500kozpa from the Leonora-Laverton district. The combination consolidates total milling capacity to ~15.9Mtpa (~11.5Mtpa VAU post KOTH expansion to ~8Mtpa + ~4.4Mtpa GMD current capacity pre-Laverton expansion), with GMD noting this presents a capital-light pathway greater production by avoiding construction of a mill at Tower Hill and the associated capex/timing risks of executing in the current WA project pipeline (we see the number of expected projects tripling vs. CY25 levels on our buy vs. build analysis), whilst retaining organic expansion optionality through continued contractor support.

According to GMD, the transaction will bring together a combined mineral endowment of **~9.4Moz in Ore Reserves and ~33.6Moz in Mineral Resources**, making it the dominant producer in the district. GMD expect the combined group would be underpinned by a stronger balance sheet with **~A$611mn in pro forma net cash** (incl. bullion and investments, and excluding ~A$89mn GMD asset finance; **GSe illustrative analysis ~A$490mn of cash including asset finance** (GMD ~A$220mn and VAU ~A$820mn, less cash consideration (~A$500mn) and Regis break fee (~A$51mn)) **and ~A$1.3bn in pro forma liquidity.** GMD noted this positions the MergeCo as well-funded for both growth and shareholder returns (capital management program part of strategic review), with a pro forma market capitalisation of ~A$12.6bn (at announcement) providing enhanced scale, liquidity and global market relevance.

The Scheme is subject to various conditions including approval by VAU shareholders at a **Scheme Meeting expected to be held in Sep/Oct (following scheme booklet in Aug/Sep), with implementation of the Scheme expected to occur in Oct/Nov 2026**. The VAU Board has unanimously recommended that shareholders vote in favour of the Scheme, in the absence of a superior proposal and subject to the independent expert concluding that the Scheme is in the best interests of VAU shareholders. Following the strategic review, **GMD plans to release a new strategic plan in 1H CY27**, including a multi-year production, cost, capex, and exploration outlook, with revised capital management framework. GMD noted some FY27 guidance to be provided with the upcoming quarterly (previously planned with a Sep-Q multi-year outlook), with some reduced capex (i.e. Tower Hill spend) as a result of the merger.

Merger appears accretive based on our illustrative analysis vs. our baseline GMD ASPIRE 500 and VAU outlooks

Synergies, and MergeCo scenario assumptions

On synergies, GMD continues to estimate potential post-tax, undiscounted synergies of ~A$2.0bn (net of transaction costs, stamp duty and the RRL break fee; Exhibit 55), including ~A$1.5bn in pre-tax, undiscounted synergies over ten years that are unique to a GMD/VAU combination and only available given the proximity of the two companies' operations at Leonora (within 35km) and Bardoc-Mt Monger (see our WA gold map), with additional, yet-to-be-quantified synergies and operational flexibility also continuing to be targeted. **We outline GMD's key announced synergies and our MergeCo assumptions/comments in Exhibit 1 below, along with an illustrative MergeCo outlook vs. a baseline pro forma (including the detail of our ASPIRE 500 GMD standalone outlook)**. We further outline underlying peer comps beneath (including production and AISC, along with the trailing 12 month milling, and OP/UG mining costs by asset vs. peers in Exhibit 48 below (see our Gold Book for further industry comps)).

Post merger completion, GMD announced that it will look to conduct a strategic review to be released in 1H CY27 which will target a review of the MergeCo asset portfolio and the optimisation of ore and mills, including:

- Processing of Tower Hill ore through the expanded KOTH mill;
- Acceleration of development of Focus Laverton and Lady Julie deposits;
- Unlocking of free milling Bardoc ore at the ~1.3Mtpa Mount Monger Randalls mill;
- Further resource to reserve conversion (~25Moz of resource currently not in reserves; Exhibit 60), where GMD noted VAU have historically maintained a ~3 year reserve life in recent years, with upside from resource conversion on increased drilling;
- Acceleration of exploration across the portfolio, with initial opportunities identified within the Chatterbox Trend, Gwalia Uppers, and King of the Hills/Darlot undergrounds;
- Potential for non-core divestments (where GMD highlighted the Leonora-Laverton region as the core asset) up to ~A$0.76bn on GSe including Deflector/Rothsay (~A$330mn; see our WA gold map) and Sugar Zone (~A$430mn) on our VAU base case outlook, where Mt. Monger could add ~A$0.9bn including our resource conversion (~A$0.8bn) and Bardoc free milling scenario (+ ~A$150mn).

Exhibit 1: We see a number of upfront and longer-term synergies supporting an accretive outlook, though see a shorter deferral of Laverton hub mill expansion

Summary of GMD Outlined Synergies vs. our assumptions for MergeCo in our illustrative analysis

Summary of GMD Outlined Synergies vs. GSe		GMD Assumed Synergy Value (A$mn; undiscounted)	GSe Assumption / Comment
Infrastructure	Enabling Tower Hill ore to be processed through KOTH mill, avoiding construction of Tower Hill mill	*350*	We assume A$350mn total capex for the Tower Hill mill including supporting infrastructure (quoted A$229mn just for mill component), where we assume a ~A$25mn sunk cost in 1H FY27. We note this also avoids ongoing sustaining capex of the new mill. GMD noted on the target deal completion timeline of late Oct/Nov-26 this would time well with commissioning of the Stage 2 expansion at KoTH mill, with first ore from Tower Hill expected in early FY28 (reasonably ahead of schedule; first production from a Tower Hill mill was expected late FY28) accelerating production, where the ball mill enables maintaining grind size and avoiding recovery loss vs. the displaced ore. • We note the Tower Hill mill contractor, GR Engineering outlined separately that they have already commenced engineering works and the procurement of long lead items for the Tower Hill mill (contract sum A$229mn), but will continue to work with GMD to optimise outcomes based on both the work scheduled and perfromed to date. GMD noted this may include fast tracking mill works at the Laverton hub.
	Potential for liberation of Laverton mill capacity to accelerate development of Focus Laverton and Lady Julie assets (yet to be quantified), and defer expansion of Laverton mill capacity (capex saving)	*365*	On our ASPIRE 500 GMD baseline outlook, we assume expansion of Laverton hub milling capacity from ~3Mtpa to ~4.75Mtpa with mill capex of ~A$350mn, ramping up over FY30/31E and delivering a GMD group standalone ~500kozpa. We see this also potentially supported by upside to Lady Julie development vs. prior planning with an initial started pit while a larger mine incorporating prior GMD tennements goes through permit revisions. On a MergeCo scenario, while we assume further gold production uplift at the KoTH mill via additional low grade displacment from Hub/Bruno-Lewis/Admiral mines, liberating Laverton mill capacity, we assume an expansion of Laverton hub milling capacity is only deferred ~1-2yrs before making economic sense to proceed on available ore in the Laverton region.
	Includes growth, non-process infrastructure, tailings storage facility and sustaining capital, for a total capital saving of A$715m	**715**	
	Subject to economic conditions, the Merged Group would have the flexibility to utilise or expand the operational 1.4Mtpa Gwalia Mill (Gwalia mill production of ~195koz based on Genesis' FY29 production outlook for Leonora)		We see the Gwalia and Ulysses mines ramping up to nearly fill the Gwalia mill for >10 years on ~80% existing resource conversion, averaging ~160-190kozpa over the period.
Mine optimisation	Introduction of Genesis ore to the KOTH mill may enable the KOTH open pit stages 2-5 to be re-optimised based on delivery of highest value for the combined portfolio (i.e. optimising for grade and cashflow), with potential upside from streaming high grade (0.9g/t) and low grade (0.3g/t) KoTH OP ore		We assume current mine plans, with stockpiling for future mill expansion optionality on higher gold prices (see below on operational optionality / "future proofing"), with mine optimisation further potential upside to our MergeCo scenario (including further upside from streaming high grade and low grade KoTH OP ore).
	Reduction in group open pit mining costs by embedding KOTH's owner-operator fleet into Genesis Mining Services (GMS) and utilising GMS across the enlarged Group, enabling optimisation of talent and equipment between sites, including KOTH and Tower Hill given their similar fleet size and location. GMD assume KOTH to commence owner-operator load and haul on 1 January 2027		We assume an ~A$0.5/t OP mining cost saving at the KoTH open pit, equating to a ~A$16mnpa saving, using GMS (and avoiding third party contractor margins). GMD noted the fleet ordered for Tower Hill mining are a larger size than initially contemplated, with these lowering unit costs of future stripping programs, including KoTH stage 4/5 cutbacks. We see net regional haulage savings as more modest, with lower haulage of Hub/Bruno-Lewis/Admiral to KoTH (vs. Laverton) partly offset by increased haulage of Tower Hill to KoTH.
	Potential to defer or avoid costs associated with development and operation of the high strip ratio Westralia open pit (23:1 LOM strip ratio) in preference for higher-quality assets (e.g. Beasley Creek and Lady Julie)		We see the Westralia deferal taking place either way as part of the GMD base case ASPIRE 500 plan, with this largely deferred by the Lady Julie mine as part of the completed MAU acquisition. We factor in Westralia development from the mid-2030s, supporting stockpiles and filling the expanded Laverton hub milling capacity.
	Optimisation of underground mining (fleet, personnel, technical expertise, infrastructure, etc) and shared technical expertise		
Operational flexibility	Potential to use ore from the Tower Hill project to displace low grade open pit feed ore at KOTH which could:		
	• Materially increase production from KOTH[1]	~745+	The introduction of Tower Hill ore (~2-3Mtpa at ~2.0g/t) to the expanded KOTH mill, displacing low-grade KOTH open pit feed (~0.3g/t), and potentially adding an incremental ~100kozpa, taking KoTH production to ~300kozpa+ by ~FY29.
	• Enable the building of sizeable stockpiles for operational optionality / "future proofing"[1]		
	• Lower processing costs by processing Genesis ore through the lower cost KOTH mill (net of additional haulage costs to KOTH vs. Tower Hill mill)[3]		We see a cost beneift of processing at the expanded ~8Mtpa KoTH mill at <A$20/t vs. our assumption of Tower Hill at >A$30/t (see exhibits below comparing gold asset processing costs).
	Unlock GMD's Bardoc free-milling ore via processing at the ~1.3Mtpa Mount Monger Randalls Mill. Free-milling Resource within Bardoc tenure includes Mineral Resource from Zoroastrian (Resource: 7Mt @ 2.3g/t 520koz; Reserve: 0.79Mt @ 3.8g/t 97koz), Excelsior (Resource: 11Mt @ 1.0g/t 350koz) and Bulletin (Satellite open pits Resource 8.5Mt @ 1.5g/t 400koz). ~35m of UG development for Zoroastrian already completed, and approvals in place.		Our MergeCo scenario asusmes a ~A$150mn NPV uplift from incorporating ~800koz of Bardoc region ore from FY28E for a ~20kozpa average gold production uplift over ~10 years (~60-70% resource conversion of Zoroastrian/Excelsior UGs and ~50% of Bardoc Satelite OPs). We note other nearby mills have refractory capacity that may support future processing of GMD's ~1.6Moz of Aphrodite refractory ore, in our view. See Summary of GMD's refractory ore mix in exhibit below.
Other	Water supply flexibility at Leonora		
	Centralised supply chain hubs (spares, purchasing power, inventory optimisation, store and freight consolidation)		We do not include any procurement benefits in our MergeCo scenario.
	Potential to unlock further resources in the region by re-prioritising or accelerating exploration		GMD noted VAU have historically maintained a ~3 year reserve life in recent years, with upside from resource conversion on increased drilling. Our standalone and MergeCo scenario both assume less than full resource conversion, with ~40-60% conversion for OPs and ~60-80% for UG on average.
	Regional G&A savings associated with rationalising overheads and administration in the Leonora region		We assume aggregated site administration costs without savings as a baseline.
Corporate	Corporate cost savings estimated by Genesis at ~A$120mn, plus	120+	We assume GMD's ~A$12mnpa corporate cost saving, but from an above pro forma corporate cost base (assumes step up in costs through integration).
	At least A$420mn of tax benefit, including the step-up in depreciable tax base (net of stamp duty (~A$230mn), Regis break fee (A$50.7mn), and the tax effect of the quantified unique synergies and corporate cost savings)[4]	420+	We note VAU had Australian tax losses at Dec-25 of A$289.6mn available and C$298.5mn of Canadian tax losses, while GMD noted they are now paying cash tax. We factor these into our MergeCo Scenario (previously included in our VAU outlook).
Total		**2,000+**	

Notes (per GMD slides): Total synergies are shown on a post-tax, undiscounted basis across a 10-year period, and net of stamp duty and Regis break fee; 1. Potential for material increase in KOTH production subject to the outcome of further technical and operational studies, and stockpile operational optionality subject to prevailing economic conditions; 3. Lower cost compared to Genesis' proposed Tower Hill mill; 4. Corporate cost savings estimated by Genesis, assumes removal of duplicate corporate costs after a period of integration of the businesses. Tax benefit is expected undiscounted estimate of tax savings under a 10-year depreciable life from an uplift in the tax value of depreciable assets and inventory arising from the tax purchase price allocation, net of expected stamp duty for the transaction, Regis break fee payable and increased taxes attributable to the unique synergies.

MergeCo vs. pro forma ASPIRE 500 and VAU outlook

In the charts below, we outline our MergeCo scenario analysis vs. a baseline pro forma of our standalone outlooks across GMD' ASPIRE 500 and VAU's 3yr outlook and beyond on our bottom up mine/mill/cost modeling. We highlight that our MergeCo scenario is purely illustrative and a range of outcomes exist beyond what we present.

Based on our illustrative analysis, we see the merger as potentially accretive, with **MergeCo lifting gold production by ~30-80kozpa to ~690-780kozpa over FY27-28E** vs. a pro forma of our baseline GMD/VAU outlooks with a **~10% lower AISC of ~A$2,850/oz** (Leonora Hub +50-100kozpa to ~430-500kozpa, AISC ~10% lower at ~A$2,650/oz), **supporting a ~15-25% EBITDA uplift** over the same period (before any mine plan/cost optimisation, including any KoTH mine grade streaming). On a 10yr timeline, we see aggregate gold production broadly similar vs. the pro forma despite not having the Tower Hill mill/deferred Laverton mill expansion (resulting in lower gold production between FY29-34E), while longer-term production declines may be deferred with LoM extension enabled by enhanced exploration spend medium-term (and Bardoc developments).

Together with a more capital-light pathway by avoiding construction of a mill at Tower Hill (and the associated capex/timing risks in the current project environment; See our buy vs. build analysis), and a ~1-2yr deferral of Laverton capacity expansion (with Hub/Bruno-Lewis/Admiral material processed through the KoTH mill adding incremental ounces vs. GMD's target and liberates capacity at Laverton), **our illustrative MergeCo scenario implies operating FCF yields increasing +5-10% vs. the pro forma the baseline outlooks to ~10-15% on average near-term with scope for growing capital returns** (average ~4-5% DPS yield) from a further strengthened balance sheet/lowered cost of capital, all else equal.

For simplicity, our charts below assume a MergeCo scenario from FY27, though with operational synergy benefits only beginning to flow through from CY27 onwards. We assume our standalone baseline mine development schedules under our MergeCo scenario, allowing for a stockpile build and drawdown at end of mine life to allow for potentially mill expansion/production acceleration in future on higher gold prices (GMD noted a history of building stockpiles for optionality/mitigating impacts from mine disruptions), but we see potential further margin upside to mine plan deferral without this optionality.

On this basis we see Hub/Bruno-Lewis/Admiral ore going to KoTH mill under MergeCo (with GMD guiding to liberating capacity at Laverton, as guided by GMD, vs. topping up the Laverton mill under our baseline ASPIRE 500 scenario). While this would liberate near to medium term mill capacity at Laverton, we see only a ~1-2yr deferral of Laverton capacity expansion with adequate ore to support project economics. At Mt. Monger, we also bring in development of the Bardoc free milling ore from FY28E for a ~20kozpa average gold production uplift over ~10 years.

We assume the maximum cash component of ~A$500mn in cash paid as part of transaction less a VAU final dividend of ~A$105mn (~A10cps unfranked on VAU limited cash tax on Australian tax credits), and capital gains tax (~A$230mn) paid ~12 months after transaction (in-line with recent transactions).

Exhibit 2: MergeCo scenario lifts gold production by ~30-80kozpa to ~690-780kozpa over FY27-28E vs. a pro forma of our baseline GMD/VAU outlooks (flat on a 10yr outlook, and up LoM)...

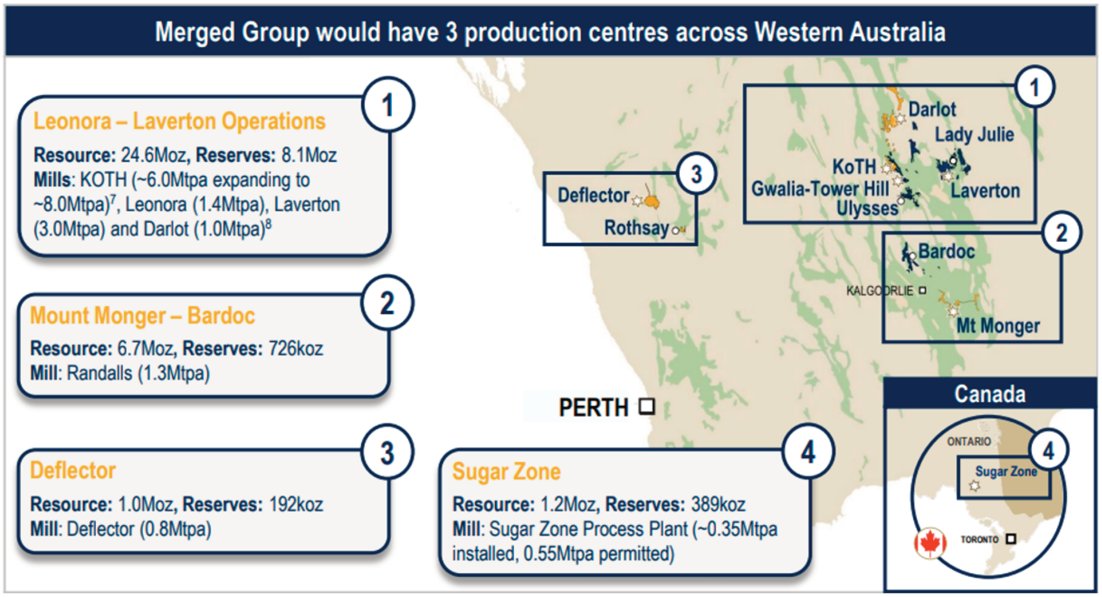
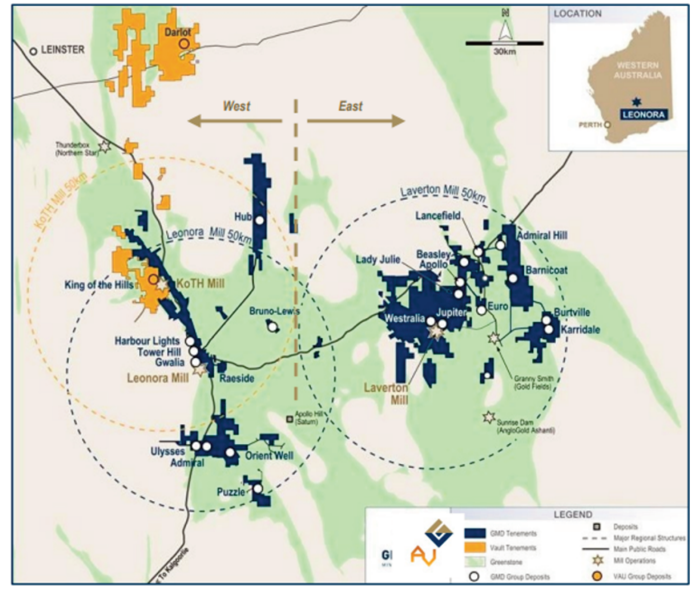
Appendix

Exhibit 52: GMD & VAU combined portfolio





7. KOTH mill expansion to 7.5 - 8.0Mtpa currently anticipated to be completed in Q2 FY27; 8. Darlot mill is currently on care and maintenance.

Source: Company filings

Exhibit 53: GMD & VAU combined operating portfolio by hub and current FY27 outlook

Leonora
Combined FY27 outlook ~390koz - 420koz
5.7Moz Reserve & 15.8Moz Resource[1,2]

- Long-life operations backed by high tonnage KOTH OP HG 0.9g/t feed, complemented by high-grade, long-life Gwalia Underground (5.0g/t), Ulysses Underground (3.4g/t) and Tower Hill Open Pit (2.0g/t)
- Dominant regional low-cost processing facility - being upgraded to ~8.0Mtpa (Q2 FY27)[3]
- Processing flexibility with operational 1.4Mtpa Gwalia processing Plant

Laverton
Combined FY27 outlook ~90koz
2.4Moz Reserve & 8.8Moz Resource[1,2]

- 3Mtpa Processing Capacity
- Large under-drilled resource endowment recently acquired - Focus and Lady Julie
- Key Expansion Projects: Lady Julie, Beasley, Chatterbox Trend
- Potential to optimise Laverton milling capacity following expedited exploration along Chatterbox Trend
- Allows deferral of high strip Westralia open pit (23:1)

Kalgoorlie
Combined FY27 outlook ~75koz - 82koz
0.7Moz Reserve & 6.7Moz Resource[1,2]

- 1.3Mtpa Processing Capacity
- Access to Mount Monger mill unlocks Bardoc free-milling ore
- 1.3Moz of Free Milling Resources (Zoroastrian, Excelsior, and Bulletin) within Bardoc Tenure[4]
- ~35m of UG development for Zoroastrian already completed, and approvals in place

Deflector
Combined FY27 outlook ~75koz – 78koz
0.2Moz Reserve & 1.0Moz Resource[1,2]

- 0.8Mtpa Processing Capacity
- Successful transition to owner-operator mining
- Exploration focused on new mining fronts to extend life beyond Ore Reserves
- Contact Lode set to provide a new underground mining front within Deflector underground
- Drilling commenced in March 2026 targeting multiple past producing mines on Gullewa trend, ~7km from processing plant

1. Leonora, Laverton and Kalgoorlie Reserve and Resource figures reflect the pro-forma aggregate (with rounding) of Genesis and Vault Mineral Resources and Ore Reserves estimates for the relevant region. Mineral Resources are inclusive of Ore Reserves; 2. Combined FY27 outlook reflects an indicative allocation, by hub, of Genesis' FY27 outlook of 275koz (prior to "ASPIRE 500") and Vault's FY27 outlook of 360-390kozpa; 3. KOTH mill expansion to 7.5 - 8.0Mtpa currently anticipated to be completed in Q2 FY27; 4. 1.3Moz free-milling Resource within Bardoc tenure includes Mineral Resource from Zoroastrian, Excelsior and Bulletin.

Exhibit 55: Genesis estimates substantial & unique synergy potential

Total Undiscounted Synergies[1]

A$2.0bn

(Post-tax, including tax effect of unique synergies)

Including

Cost savings and synergies unique to this deal[2]

A$1.5bn

(Pre-tax, undiscounted)

Capital Savings

- Enabling Tower Hill ore to be processed through KOTH mill, avoiding construction of Tower Hill mill and expansion of Laverton mill capacity
- Includes growth, non-process infrastructure, tailings storage facility and sustaining capital, for a total capital saving of A$715m

Corporate & Tax savings

- Corporate cost savings estimated by Genesis at ~A$120 million, plus;
- At least A$420 million of tax benefit, including the step-up in depreciable tax base (net of stamp duty, Regis break fee, and the tax effect of the quantified unique synergies and corporate cost savings)[4]

Operating Benefits and Cost Savings

Conservative estimates of savings and benefits associated with optimising the right ore to the right mills, including:

Lower processing costs
Cost savings by processing Genesis ore through the lower cost KOTH mill (net of additional haulage costs to KOTH vs. Tower Hill mill)[3]

Regional G&A efficiencies
G&A savings associated with rationalising overheads and administration in the Leonora region

Unlock Bardoc free-milling ore
Unlocking Genesis' free-milling ore at its Bardoc assets via processing at Mount Monger (Randalls Mill)

Reduction in group open pit mining costs
Embedding KOTH's owner-operator fleet[5] into GMS and utilising GMS across the enlarged Group, enabling optimisation of talent and equipment between sites, including KOTH and Tower Hill given their similar fleet size and location

1. Total synergies are shown on a post-tax, undiscounted basis across a 10-year period, and net of stamp duty and Regis break fee; 2. Unique synergies are shown on a pre-tax, undiscounted basis across a 10-year period; 3. Lower cost compared to Genesis' proposed Tower Hill mill; 4. Corporate cost savings estimated by Genesis, assumes removal of duplicate corporate costs after a period of integration of the businesses. Tax benefit is expected undiscounted estimate of tax savings under a 10-year depreciable life from an uplift in the tax value of depreciable assets and inventory arising from the tax purchase price allocation, net of expected stamp duty for the transaction, Regis break fee payable and increased taxes attributable to the unique synergies; 5. KOTH to commence owner-operator load and haul on 1 January 2027.

Source: Company filings

Exhibit 56: GMD's other potential synergies and operational flexibilities

Infrastructure	▪ Subject to economic conditions, the Merged Group would have the **flexibility to utilise or expand the operational 1.4Mtpa Gwalia Mill** ▪ Potential for liberation of Laverton mill capacity to **accelerate development of Focus Laverton and Lady Julie assets**
Mine optimisation	▪ Introduction of Genesis ore to the KOTH mill may enable the KOTH open pit stages 2-5 to be re-optimised based on delivery of highest value for the combined portfolio (i.e. optimising for grade and cashflow) ▪ Potential to **defer or avoid costs associated with development and operation of the high strip ratio Westralia open pit** (23:1 LOM strip ratio) ▪ Optimisation of underground mining (fleet, personnel, technical expertise, infrastructure, etc) and shared technical expertise

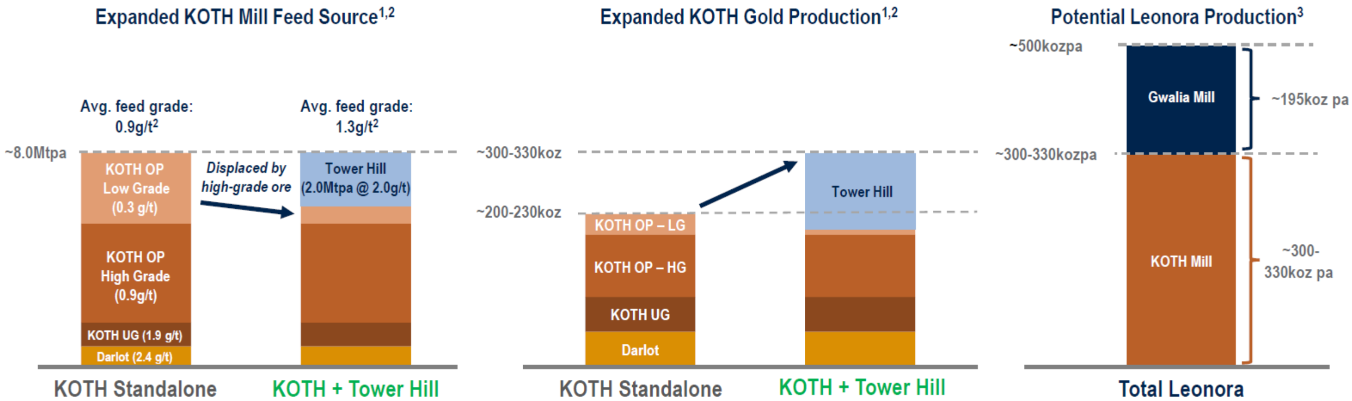
Operational flexibility	▪ Potential to use ore from the Tower Hill project to displace low grade open pit feed ore at KOTH which could:
	  ▪ **Materially increase production from KOTH**[1], and;
	  ▪ Enable the building of sizeable stockpiles for operational optionality / "future proofing"[1]

Other	▪ Water supply flexibility at Leonora ▪ Centralised supply chain hubs (spares, purchasing power, inventory optimisation, store and freight consolidation) ▪ Potential to **unlock further resources in the region** by re-prioritising or accelerating exploration.

1. Potential for material increase in KOTH production subject to the outcome of further technical and operational studies, and stockpile operational optionality subject to prevailing economic conditions.

Source: Company filings

Exhibit 57: Displacement of lower grade KoTH tons lifts mill production, with further upside in consolidating Hub/Bruno-Lewis/Admiral material, which then liberates milling capacity at Laverton
Illustrative production uplift at KoTH mill from Tower Hill displacement of low grade material



Source: Company filings

Exhibit 58: GMD note mining has commenced at Tower Hill, with first ore expected in early FY28 (with KoTH mill processing bringing forward first production from late FY28 under GMD's Tower Hill mill build)
Tower Hill open pit progress - mining commenced (GMD Business Update 3 July 2026)

Source: Company filings

Exhibit 59: We see upside to the Lady Julie permitted mine plan, with room for a starter pit in the permitted area while extending the permit to the prior GMD tenements for a larger pit shell (subject to drill success)

Source: Company filings

Ratings, NAV, EPS and price targets

We reinstate a rating on **GMD (Buy), and RRL (Neutral)**, with our investment thesis and risks set out below. We are Not Rated on VAU.

Genesis Minerals (GMD.AX): Reinstate a rating (Buy; with c. 30% upside)
Though we have historically been more cautious on GMD's outlook, with the ASPIRE 500 soft guiding production to FY31E largely then leaving more negative surprises on cost and capex at the previously planned Sep-Q multi year outlook refresh (though we also continue to see risk vs. consensus across our gold coverage), we see reasonable upside to our revised estimates which includes increased mill and mining project capex to further reflect the current inflationary environment.

We note our GMD earnings estimates do not reflect the proposed merger with VAU as it has yet to reach financial close. Under our illustrative MergeCo scenario discussed above, we see reduced capex and more immediate production uplifts potentially being supportive for near to medium term FCF yields, and positioning the business more defensively for ongoing gold price volatility.

We **rate GMD Buy** on:

1. **Valuation:** We see GMD on our standalone ASPIRE 500 outlook trading at a discount at ~0.8x NAV or pricing ~US$3,350/oz gold (peer average >0.8x NAV and ~US$3,300/oz), assuming further elevated capex and opex, with ~10-25% FCF yields from FY30E following near-term investment.
2. **Production growth outlook:** On our standalone GMD outlook and assessment of the ASPIRE 500 plan on our bottom up mine/mill/cost modeling, we see GMD with broadly flat production to ~FY28E, then growing production to ~400koz in FY29E as the Tower Hill mill ramps up, with a Laverton mill expansion (from ~3Mtpa to ~4.75Mtpa) and development of the recently acquired Lady Julie supporting production of ~500koz from FY31E.
3. **Growing returns capacity on balance sheet strength:** As a standalone, we see GMD remaining net cash, and in a position to start dividends from FY27E on our gold price outlook.

Key downside risks to our view (-):

- **Construction and commissioning risk:** Delays/accelerations to construction and commissioning of growth projects could result in shifted timing of revenues, changed operating costs or capex.
- **Operating risks:** Production outages due to unplanned failures, technical issues or external factors (e.g., weather, industrial action, geopolitical factors, fiscal/heritage changes), may be negative to our outlook. Exploration success may also change the outlook.
- **Cost inflation:** Inflationary pressures can further escalate operating costs with higher diesel, labour, and freight rates. Capex changes at growth projects (without changing scope) would also impact our valuation.

- **Commodity prices:** Changes in gold (and other by-product metals, such as copper) pricing will impact our earnings, where weaker pricing would negatively impact our earnings forecast.
- **Macro risks:** FX risk, where gold prices are denominated in USD; the appreciation of AUD could negatively impact AUD denominated earnings.
- **Growth, returns, and M&A:** Additional scope to existing projects or new projects could incrementally change the outlook for the business, while changes in the cash balance may impact the outlook for capital returns. Further possible M&A may also change the outlook.

As our base case does not include the proposed transaction (as it has yet to reach financial close), we reinstate our rating with our prior valuation methodology, with our price target for GMD derived on a blend of fundamental value (85% weighting) comprising 50:50 NAV:NTM EBITDA and an M&A value (15% weighting). Our M&A value is based on our prior and unchanged 1.3x NAV (based on average of relevant historical transactions) where we assign an M&A Rank of 2 given reasonable potential for regional consolidation in the Australian gold sector.

Regis Resources (RRL.AX): Reinstate at Neutral (~15% upside)
We rate RRL a **Neutral** on:

1. **Valuation:** Though growing near-term FCF yields into FY26-27E of ~15% remain attractive vs. peers with unhedged gold production and modest near-term capex, we factor in significant spend on McPhillamys through FY28E with peak capex in FY29E, where FCF yields fall to ~4%. Given the declining production profile of existing assets over the medium-term we see this as priced in, where on our LT gold price of US$3,800/oz RRL is trading at ~0.80x NAV or pricing ~US$3,350/oz gold (peer average of ~0.75x NAV/~US$3,100/oz), where we already factor in ~100% resource conversion on ongoing UG exploration success (and further upside from exploration as nominal value).
2. **Organic growth options:** Underground extensions at DSO (Duketon South) and Tropicana are positive, though only incremental to valuation. While we see further upside from delivery of production targets/opportunities of 335-400koz+ in FY28, sustainable delivery relies on ramped up and optimised undergrounds and reserve replacement, with this a more near-term risk vs. peers (200-250kozpa at Duketon South; 135-150kozpa at Tropicana relies on the Havana underground ramp up from 3Q FY27; prior targets excluding McPhillamys). The successful ramp up of McPhillamys may defer a softening net production profile into the next decade. We also see cash costs well ahead of peers, with this only partly on non-cash impacts.
3. **Net cash supports further opportunities/capital returns without major organic growth spend:** With RRL now net cash, broadly in line with gold sector peers, we see the near-term capex profile allowing room for ongoing capital returns, or optionality around further underground development or M&A (having been recently acquisitive).

Exhibit 61: We reinstate ratings on GMD (Buy), and RRL (Neutral)

We update estimates for RRL, VAU, and GMD to reflect the below, and set out EPS estimates, NAVs and 12-m PTs below.

	YE	Crncy		Rating	Price Target A$/sh	NAV A$/sh	EBITDA ($bn) 2026	EBITDA ($bn) 2027	EBITDA ($bn) 2028	EPS (cps) 2026	EPS (cps) 2027	EPS (cps) 2028	Earnings changes
RRL	June	AUD	Previous	Not Rated	-	-	1.35	1.34	1.34	96	94	92	Pre-reporting of June-Q/FY26 production and cash balances, and FY27 guidance.
			Current	**Neutral**	**7.10**	**7.50**	**1.41**	**1.21**	**1.33**	**101**	**82**	**90**	
			% Change	-	-	-	5%	(10%)	(1%)	5%	(13%)	(2%)

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by Goldman Sachs Global Investment Research and referred to in this research.

Goldman Sachs beneficially owned 1% or more of common equity (excluding positions managed by affiliates and business units not required to be aggregated under US securities law) as of the month end preceding this report: Genesis Minerals Ltd. (A$5.56), Regis Resources (A$5.64) and Vault Minerals (A$4.62)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: Regis Resources (A$5.64)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: Regis Resources (A$5.64)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: Regis Resources (A$5.64) and Vault Minerals (A$4.62)

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	59%	43%

As of July 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,104 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: https://www.goldmansachs.com/worldwide/india/research-analyst. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy.
