

Financial Software

Examining AI Across Intapp and SS&C

In this note we take a closer look at how both INTA and SSNC are utilizing AI. We focus on what is changing in their product stacks, how governance and data foundations shape real-world deployability, and where AI is already showing up in bookings (INTA) versus cost savings/margin expansion (SSNC). Both companies are aggressively transitioning towards “agentic AI” strategies, though they approach the market from different structural positions. Intapp is focused on a “Firm AI” concept, providing a governed agentic platform specifically for the unique compliance and conflict-of-interest requirements of professional services firms. In contrast, SS&C leverages its massive scale as “Customer Zero”, deploying AI agents internally across its own business process outsourcing (BPO) operations to drive margin expansion before commercializing these solutions for its 23,000+ global clients. We continue to like INTA (OW) and remain relatively more cautious on SSNC (N) vs. the rest of our Vertical SaaS coverage.

- INTA vs. SSNC: different starting points, same destination (agentic AI). INTA is approaching agentic AI from a cloud-native vertical SaaS posture (Celeste as a firmwide agentic platform), while SSNC is approaching it from scaled “intelligent automation” and systems-of-record/BPO operations (WorkHQ as orchestration on top of Blue Prism). Should these companies succeed with their strategic plans, they would likely win in different ways: INTA via faster product-led SaaS adoption, SSNC via operational leverage and proven-at-scale deployments.
- INTA + SSNC: governance as the monetizable control layer. Both companies are positioning themselves as the infrastructure that regulated customers must route AI through to keep deployments permissioned, auditable, and safe—INTA via ethical walls/conflicts/MNPI-aware controls for professional firms, and SSNC via enterprise guardrails and compliance-first governance for regulated financial and healthcare workflows. The takeaway is that governance is not a “feature”; it’s the adoption bottleneck, and both are trying to own that choke point.
- INTA’s AI-defensibility looks structural; SSNC’s looks execution-dependent. INTA’s differentiation is a tighter “context + governance + workflow embedment” story (firm institutional memory plus broader data context, wrapped in always-on policy enforcement and distributed through day-to-day workflows), which supports scalable multi-tenant rollout. SSNC’s moat is deep proprietary data and scale, but its AI upside depends on packaging internal “Customer Zero” wins into a unified external platform despite portfolio complexity and an outsourcer perception—so the actionable watch-items are cohesion of the product suite, clarity of go-to-market, and consistency of client experience.
- We are establishing our Dec-27 PTs for both names: INTA PT of \$47/sh and

See page 14 for analyst certification and important disclosures.

SSNC PT of \$87/sh. We are making modest housekeeping changes to our INTA forecasts, and as a result, keep our new end-27 INTA PT unchanged at \$47/sh (similar to end-26E previously). At our PT, INTA would trade at 20x 2027 EV/EBITDA, which we view as reasonable for a relatively balanced Rule of 40 company. For SSNC, we have trimmed our mid-term revenue growth and margin expectations as we view recent de-emphasizing of traditional tech budgets as a mid-term risk for demand. As a result, we are establishing a Dec-27 PT of \$87/sh (vs. a Dec-26 PT of \$94/sh prior). At our PT, SSNC would trade at 10x 2027E EV/EBITDA, which reflects lukewarm organic revenue growth outlook - an arguably reasonable multiple for a rule of 20 company.

Overview

Table 1: CY27 Financial and Valuation Summary

CY2027	SSNC	INTA

S&M	8%	26%
R&D	7%	21%
G&A	6%	11%
Capex	4%	2%
FCF	22%	29%
FCF (as % of EBITDA)	56%	115%
Valuation		
EV/EBITDA (27E/5YR Average)	8x / 11x	12x / 74x
EV/FCF (27E/5YR Average)	15x / 22x	14x / 61x

Source: J.P. Morgan estimates, Bloomberg Finance L.P.

Architectural starting points. INTA and SSNC are converging on agentic AI, but from fundamentally different bases: Intapp is a cloud-native vertical SaaS platform for professional firms, while SS&C is a scaled, software-enabled services and systems-of-record provider that is layering AI orchestration onto an automation (RPA) foundation built around Blue Prism.

Both are essential from a governance perspective. Both SSNC and INTA are positioning themselves as critical governance layers in the transition to agentic AI, aiming to make LLM adoption auditable, permissioned, and safe in highly regulated workflows. Intapp frames governance through ethical walls, conflicts, and MNPI-aware access controls for “Firm AI,” while SS&C emphasizes enterprise-grade controls (guardrails, data protection, explainability, and human-in-the-loop) for regulated financial services and healthcare use cases.

How AI is operationalized (platform vs. proving ground). Intapp is productizing agentic AI primarily through Celeste and adjacent workflow modules that embed AI directly into BD, deal execution, and compliance processes, with monetization tied to SaaS expansion and (increasingly) AI activity. SS&C’s model is “Customer Zero” first—deploying digital workers and agents internally to drive measurable cost savings and margin expansion—then commercializing those production-tested patterns via WorkHQ, AI Gateway, and vertical product embeds.

What ultimately differentiates outcomes. Intapp’s edge is a unified “context + governance” story (firm institutional memory plus an industry graph, wrapped in policy enforcement) that supports scalable, multi-tenant agent deployment across firms. SS&C’s edge is operational scale and deep systems-of-record data in core processing domains, but its AI narrative has to overcome portfolio complexity and an outsourcer perception by presenting a more unified, technology-led platform experience to clients.

Intapp

Intapp's AI strategy centers on governed, model-agnostic agentic workflows for professional services, where ethical walls and confidentiality controls are core product requirements. It is positioning itself as the control plane for adopting frontier-model capabilities safely—combining deep AI partnerships with governance features like Walls for AI. That strategy is increasingly embodied in Celeste (its flagship agentic platform launch), alongside Assist and AI-enabled workflow modules, and is reinforced by recent acquisitions that expand workflow coverage and deepen Microsoft 365 integration—supporting a defensibility thesis rooted in compliance-grade deployment and embedded distribution.

AI partnerships. Intapp has strategically positioned itself at the center of the agentic AI shift by forming deep partnerships with leading frontier model providers and technology platforms. Intapp has collaborated with OpenAI to allow users to access its D&B Commercial Graph within ChatGPT and Codex via MCP servers. This integration is primarily focused on finance workflows, enabling professionals to bring verified business identity, credit, and risk data directly into natural language prompts. Intapp has also integrated with Anthropic to make its business data available within the Claude platform ecosystem. Additionally, Intapp established a strategic partnership with Harvey, a leading generative AI platform for legal professionals, to provide a governed and compliant framework for AI deployment in the legal industry. Harvey is standardizing on Intapp's Walls for AI and the Celeste platform to power its confidentiality controls. This integration ensures that interactions within Harvey's tools — including Assistant, Vault, and Workflows — automatically respect existing firm policies and professional responsibility obligation.

Core AI Products and Features. Collectively, Intapp's AI product suite is built around a single theme: embedding agentic automation into day-to-day professional workflows while keeping governance, confidentiality, and policy enforcement “always on.”

- **Recently launched: Celeste.** Intapp has recently launched Celeste, which it characterizes as the most significant product launch in its history. Celeste is a model-agnostic, governed agentic AI platform designed to automate core workflows in business development, deal management, and compliance while strictly adhering to professional responsibility standards like ethical walls.
- **Intapp Assist:** A generative AI add-on that provides summarization, email outreach assistance, and narrative generation
- **Walls for AI:** A governance layer that extends Intapp's ethical wall protections to third-party AI tools like Microsoft 365 Copilot, preventing the “ungoverned co-mingling” of sensitive client data.
- **Intapp Time (New Release):** An AI-enabled timekeeping solution that captures billable hours automatically, which has served as a primary catalyst for cloud migrations.
- **Intapp DealCloud Activator:** A research-backed growth platform that uses AI to embed business development coaching and prioritized “next-best actions” into professional workflows.

AI Monetization. Intapp is transitioning from traditional per-seat licensing toward new consumption-based models for its agentic AI platform, moving quickly to establish direct monetization through specific product SKUs and a major architectural shift toward agentic AI. The company has launched products such as Intapp Assist as monetized offerings where existing clients can purchase the functionality for a specific price with a unique SKU, rather than it being a free upgrade. More recently with the launch of its Celeste platform, Intapp is introducing a model that includes a platform fee plus consumption-based pricing. This model charges based on the value created by expert agents and the volume of business activity flowing through the platform.

Recent AI-Enabling Acquisitions. Intapp's M&A strategy is a deliberate vertical-first "land & expand" playbook: acquiring niche, industry-specific assets that deepen its pre-built workflow "blueprints" and expand TAM/SAM by pulling Intapp into adjacent sub-verticals (particularly within financial services and real assets). The company has prioritized targets that add differentiated data/context or compliance-grade workflow depth—capabilities that are difficult for horizontal platforms to replicate—and that can be distributed across the broader Intapp installed base through cross-sell and tighter platform integration.

- **TermSheet (2025):** Acquired to create a unified operating system for real assets, incorporating "Applied AI" to automate underwriting and investment lifecycles in the commercial real estate market.
- **delphai (2024):** A Berlin-based AI company specializing in structuring firmographic data from public sources to provide validated intelligence with direct source citations
- **Transform Data International (TDI) (2024):** A partner that builds enterprise collaboration technology, acquired to deepen AI integration with Microsoft 365 tasks

Celeste in Action: Management-Led Product Demonstration

Last Wednesday morning, in a session led by Thad Jampol (Co-Founder and Chief Product Officer), Intapp overviewed the main use cases for its recently launched Celeste tool. Celeste supports hundreds of business workflows across professional firms, and management underlined it as more than a "specialized copilot" — the advantage isn't the model, but what's built on top (workflows, integrations, permissions, and playbooks). Management repeatedly framed Celeste's proprietary value as being grounded in a firm's own institutional context (deals, clients, relationships, prior work product, and judgment) rather than operating as a generic layer trained on broadly-available internet data. Amid the ongoing AI proliferation debate within Vertical SaaS, we walked away from the webinar further encouraged by Intapp's AI defensibility moat and the value offered to firms by Celeste.

- **Deal sourcing and relationship building.** Celeste was positioned as compressing time-consuming origination work—especially mapping who knows whom—into fast, decision-oriented outputs (e.g., board intelligence/outreach maps) that blend the firm's relationship graph with external enrichment, then rank outreach paths so teams can spend time on angle development and relationship deepening rather than stitching inputs together.
- **AI defensibility highlighted by a client:** "The intelligence is ours, and not

something generic tied to Hg Capital.” Intapp featured a customer, Shirin Veeran (Data & AI at Hg Capital). The client highlighted the real AI-defensibility piece Intapp emphasizes: the compounding advantage of a firm’s own structured institutional data and workflows (i.e., screening and recommendations grounded in the firm’s mandates, criteria, and historical experience rather than generic heuristics). Importantly, Celeste sources information from multiple sources: i) proprietary firm data already contained within DealCloud, ii) publicly available data online, and iii) third-party data providers enabled through Intapp’s ecosystem/connectors (e.g., MCP-style connectors and existing data partnerships). While pulling insights from the web to augment a firm’s internal data, the data returned is *tailored* to a firm’s configured terminology and operating model—and constrained by firm permissioning/ethical walls (so users only see what they are entitled to see).

- **Differentiation vs. generic models / “what’s built on top.”** Intapp’s core claim was that access to foundation models is increasingly commoditized, so the durable differentiation is (1) native system-of-record integration and “day-one inheritance” of firm configuration (data structures, definitions, nomenclature, permissions), and (2) playbooks that encode repeatable firm procedures (e.g., deal screening gates like mandate/criteria/preferences) so outputs are grounded in process logic with clearer lineage back to the system of record. This framing carried through demos that chained workflows (screening → modeling → IC materials and reporting) and emphasized reliability via structured historical data plus user-enabled connectors (rather than uncontrolled external retrieval).
- **BakerHostetler: governance is the adoption requirement.** Katherine Lowry, current Intapp customer and Chief Information Officer at BakerHostetler, described adoption anchored on pillars across growth, compliance, and profitability, with near-term focus on conflicts and intake. She emphasized that implementation has moved beyond generic productivity discussion into a sandbox phase with live teams, and that governance is central—enabling broader sharing of workflows/playbooks while maintaining secure, structured, permission-based controls over who can use what and what data can be accessed.
- **Bottom line.** Across investment and legal workflows, Celeste was positioned as “firm AI” (AI for the business of the firm) rather than a generic copilot: grounded in proprietary firm intelligence, enriched via ecosystem data when enabled, and governed with guardrails for professional-firm obligations (e.g., MNPI controls, ethical walls, confidentiality, and independence). The strategic message was a compounding advantage flywheel: as firms use Celeste to execute and document decisions through playbooks, institutional memory deepens—benefiting early adopters as each quarter adds more proprietary context for future workflows.

AI defensibility is strong. Intapp’s moat comes from serving as the governance and compliance control plane that professional services firms need before they can deploy AI agents at scale. By enforcing ethical walls, conflicts, and MNPI restrictions at the architecture layer, Intapp ensures AI tools inherit the same access constraints as humans—reducing inadvertent data co-mingling and regulatory risk and helping firms move from pilots to production. Just as importantly, Intapp has a “data context” moat: Celeste can ground models in a firm’s proprietary institutional memory (transactional, compliance, and relationship history) while also enriching outputs with Intapp’s broader data ecosystem and structured intelligence (e.g., firmographic data), creating a context engine horizontal AI providers can’t easily replicate. This combination protects and activates proprietary knowledge in a secure environment, while embedding compliance early in the engagement lifecycle to defend realization and margins as AI accelerates

workflow velocity.

SS&C

SS&C's AI strategy is rooted in "Intelligent Automation", primarily driven by its \$1.65B acquisition of Blue Prism. SSNC utilizes its scale — 29,000 employees and 23,000 clients — as a testing ground, and then aims to deliver production-tested AI solutions that meet the rigorous security and compliance standards of the financial services and healthcare industries.

Core AI Products and Features. SS&C's AI product stack is unified by an "intelligent automation" thesis: combine RPA scale with governed GenAI and domain-specific agents to move regulated operations from manual processing to orchestrated, production-grade workflows. WorkHQ is positioned as the orchestration layer that coordinates humans, digital workers, and AI agents end-to-end, while AI Gateway supplies the trust/governance wrapper required for financial services and healthcare deployments. On top of that platform base, SS&C is productizing repeatable outcomes via a catalog of pre-built agents (document intake, contract processing, statement validation) and embedding specialized AI into core vertical applications like Algorithmics (risk analytics) and Intralinks (deal due diligence).

- **Blue Prism WorkHQ:** An orchestration platform scheduled for launch on April 28th, 2026, designed to integrate RPA, AI agents, and human workflows into managed operational streams.
- **SS&C AI Gateway:** A vertically integrated governance platform that provides a "trust layer" for regulated firms to adopt LLMs while keeping proprietary data fully protected
- **AI Agent Catalog:** A suite of pre-built, domain-specific agents focused on tasks such as interpreting inbound documents, processing vendor contracts, and validating capital statements. SSNC has deployed over 3,500 digital workers and 50 AI agents across its internal operations, and internal automation efforts have generated ~\$200M in run-rate cost savings for the company.
- **Algorithmics Risk Intelligent Agent (ARIA):** A specialized agent designed to aid in complex risk assessment and analytics for financial institutions
- **Intralinks Deal Center AI:** Uses generative AI to allow users to surface information quickly during M&A due diligence processes

AI monetization. SSNC is monetizing AI via (1) direct automation economics in its Intelligent Automation & Analytics (IA&A) segment (~9% of FY2025 revenue), (2) embedded AI upsells within its core "systems of record," and (3) select domain-specific AI agents—while leaning on a "customer zero" approach to prove efficiency internally before scaling commercialization across its 23,000+ client base. In IA&A, Blue Prism remains the core commercial driver (55–60% of segment revenue), with monetization still largely tied to traditional enterprise models (licenses for "digital workers," process mining, intelligent document processing) rather than per-query pricing.

WorkHQ as a new agentic layer. SS&C is also positioning WorkHQ as an agentic orchestration layer—deployed internally first, then sold—to coordinate digital workers, people, and AI agents across regulated workflows, supported by governance-first controls and its AI Gateway. Separately, SS&C is embedding AI into products like Intralinks Deal Center and cloud-native platforms such as Genesis and Singularity, where legacy-to-cloud conversions can drive ~1.5–2.0x revenue uplift as clients adopt higher-value, AI-enabled services; near-term AI revenues remain early/sub-scale, but management expects growth as internal agents are productized into a broader commercial catalog.

Recent AI-Enabling Acquisitions. SS&C’s M&A engine functions as an extension of R&D: it buys proven software and services assets at disciplined valuations, then applies a repeatable integration playbook to migrate work onto its technology stack and drive productivity/margin expansion. Recent transactions are consistent with an automation-focused portfolio strategy—anchored by the Blue Prism platform deal—where bolt-ons add specific regulated workflow capabilities (e.g., class-action recovery processing, multi-asset wealth workflows) that can be scaled across SS&C’s broader software-enabled services footprint. At the same time, the breadth of the portfolio can create integration and “single-solution” packaging challenges, which SS&C must actively manage to avoid a siloed customer experience.

- **Battea-Class Action Services (2024):** A \$671M acquisition that uses intelligent automation to manage securities class action claims and recovery processes
- **Blue Prism Group (2022):** The foundational acquisition (\$1.65B) for SS&C’s AI strategy, providing the core robotic process automation (RPA) and intelligent automation platform
- **Hubwise (2022):** Enhanced SS&C’s ability to deliver highly automated multi-asset and multi-currency solutions

AI defensibility: a mixed bag. SS&C believes its competitive advantage comes from its 40 years of proprietary data streams. While LLMs can generate content, they require SS&C’s unique data sets for financial and healthcare accuracy. However, as compelling as this moat and upcoming AI initiatives are, the company still faces meaningful execution risk in translating internal “Customer Zero” success into a unified, differentiated external platform—given ongoing integration complexity across a large M&A-built portfolio, a persistent “outsourcer” market perception, and a lower R&D intensity vs. AI-native SaaS peers that can iterate and deploy agentic capabilities more quickly.

Investment Thesis, Valuation and Risks

Intapp (Overweight; Price Target: \$47.00)

Investment Thesis

Intapp is a multi-tenant SaaS with cloud-based software solutions managing deal flows, CRM, and compliance for companies in the professional services space, serving top legal firms (~half of ARR), accounting majors, investment banks and private equity firms (~1/4 of ARR). Intapp built its solutions on proprietary industry graph model, which captures relevant data from different parties in the deal ecosystem. Intapp layers applied AI and a low-code configurable user system to enhance its offerings through data. Intapp's recent extension of MSFT's CoPilot synthesizes data from disparate parts of the business, past transactions and interactions; Intapp sources data from over 85M companies and 200M clients, available for DealCloud customers to better understand industry dynamics.

Valuation

We derive our December 2027 price target using a 10-year, multi-stage discounted cash flow (DCF) analysis. We forecast all three financial statements in detail through INTA's FY2029 (ending in June 2029), including fully diluted shares. We forecast a 2% terminal growth rate and set Intapp WACC at ~13%. At our Dec 2027 price target of \$47/sh, Intapp would trade at nearly 5x Calendar Year 2027E EV/Sales.

Risks to Rating and Price Target

Share overhang. While stock liquidity has recently improved, sale by one of the large pre-IPO shareholders could lead to stock volatility.

Fragmented market. Intapp operates in a highly fragmented market with competition stemming from horizontal players, point solutions and homegrown systems. Often customers rely on multiple solutions simultaneously, including legacy on-prem platforms. However, penetration across services that offered by DealCloud and collaboration products remains low, offering long-term growth upside.

Customers may be resistant to cloud transition. Over 80% of INTA's total ARR is on the cloud, however, due to the nature of the industries served (large companies with a lot of sensitive data flowing through the platform), INTA customers may be resistant to fully transition to the cloud. Despite over 90% of clients having at least one cloud application, they may still prefer to keep certain solutions on-prem.

Investors worry about saturation. Despite Intapp having some form of reach among many of the largest legal and accounting firms, it is only slightly penetrated, with a significant opportunity to expand even among current customers. Investors may cite concerns about growth runway, however, even among its top 200 customers, Intapp sees significant room for further penetration.

Investment Thesis, Valuation and Risks

SS&C Technologies *(Neutral; Price Target: \$87.00)*

Investment Thesis

SS&C provides software and software-enabled services for mission-critical financial processes. Over the years, SS&C has grown to become the behemoth in the industry with an over \$5B top line and leading positions across many verticals of the Financial Services Software space. M&A has been a consistent component of its growth strategy, with SS&C acquiring 65 companies since 1995, including 8 sizable deals in the last decade worth a combined ~\$14B. However, SS&C is increasingly viewed by clients as a business process outsourcer rather than a differentiated technology platform, with persistent integration challenges and siloed operations resulting from its acquisitive model. Combined with unexciting organic revenue growth, segment headwinds, and a fading “safe haven” narrative, we see limited margin expansion and believe SS&C appears fairly valued relative to SaaS and outsourcing peers with similar financial profiles.

Valuation

We derive our Dec-27 price target using a 10-year, multi-stage discounted cash flow analysis. We forecast all three financial statements in detail through 2028, including fully diluted shares, then assume cash flow growth rates through FY36. We forecast a 2% terminal growth rate and set SS&C's WACC at ~12%. At our price target of \$87/sh, SSNC would trade at 8x 2027E EV/EBITDA and 15x EV/FCF, broadly in line with current averages of a group of profitable software peers.

Risks to Rating and Price Target

Risks to Upside

Re-acceleration of competitive businesses. SSNC has a number of businesses in higher growth markets, including its Wealth and Investment Technologies, Intralinks, Intelligent Automation & Analytics, and Healthcare businesses. Should the growth rates of these businesses increase, SSNC shares could re-rate higher on higher growth prospects.

Strong FCF generation could support shareholder value. SSNC consistently prints a high-teens to low-twenties FCF margin. This creates attractive opportunities to fund share buybacks, pay higher dividends or pursue M&A to support company growth.

Floating rate debt benefits from lower rates. SSNC actively carries debt to fund acquisitions, usually through floating rate debt. Should interest rates lower, SSNC's cost to borrow will lower accordingly.

Risks to Downside

M&A-driven growth strategy. Between 2005 and 2010 (during the time when SS&C was private), the company acquired roughly 30 companies, having spent c\$0.5B in total (with an average deal size of \$17M and valuation of 3-7x EBITDA). However, multiples re-rated, and it became incrementally more difficult to create value for investors on an ROIC basis: between 2012 and 2022, SS&C carried out 35 acquisitions (including 8 sizable deals) that were collectively over \$14B in value. Given that acquisitions are likely to remain an important part of SS&C's growth going forward, we think elevated valuation multiples could stall the pace of the company's business development.

Healthcare JV execution. Should the DomaniRx JV fail to live up to functionality expectations, SSNC could encounter further outflows of Healthcare revenues impacted by

client losses.

Recession headwinds. Being a software provider and outsourcing partner to financial services companies in a time of recession may prove challenging as IT budget spending gets delayed or even cut. A recession could also result in a financial markets meltdown, implying a decline in assets under management as well as overall trading volumes, both of which ultimately drive top-line growth for SS&C (particularly the fund administration business, which is priced based on AUM).

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: Gogolev, Alexei M: AppFolio (APPF), Autodesk (ADSK), Bentley Systems (BSY), Braze (BRZE), CCC Intelligent Solutions (CCC), CoStar Group (CSGP), Doximity (DOCS), GoDaddy Inc (GDDY), Guidewire Software (GWRE), HealthEquity (HQY), Intapp (INTA), PTC Inc (PTC), Pegasystems (PEGA), Phreesia (PHR), Procore (PCOR), SS&C Technologies (SSNC), Samsara (IOT), Tyler

Technologies (TYL), Veeva Systems (VEEV), Veradigm (MDRX), Verisign (VRSN), Waystar (WAY), Wix.com (WIX)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
