

Oil Tracker: Negative Supply News From Gulf and Russia

- Spot Brent futures prices increased to around \$80/bbl this Wednesday as President Trump said a ceasefire with Iran was over following yesterday's escalation in the Strait of Hormuz.
 - One LNG and two oil tankers were hit by drones near the Omani coast in the Strait on Tuesday, triggering a US response including revoking the waiver on sales of Iranian oil and launching strikes against Iran Tuesday night.
 - Iran retaliated with strikes against Bahrain and Kuwait saying it will not allow "interference" in the Strait, while the US conducted additional strikes against Iran Wednesday night.
 - The recent attacks on tankers highlight still elevated risks of crossing, and shippers may hesitate to cross under the currently unclear ceasefire status, weighing on near-term Hormuz flows.
- Our estimated oil flows from the Persian Gulf recovered to above 80% of pre-war flows within the first 10 days after Hormuz reopening as trapped tankers rushed to leave the Persian Gulf, but retreated to the low-70s% of normal (16-17mb/d, 7-day moving average) following recent attacks on tankers (Exhibit 1).
 - Hormuz flows accounted for all the pick-up in Persian Gulf flows as our estimated oil exports through the Strait recovered to 10mb/d or 1/2 of pre-war flows within the first 10 days after the MoU but decreased to 8.3mb/d recently (7-day moving average) (Exhibit 2).
 - The recent attacks in the Strait support our view that Iran's willingness, rather than lack of transportation capacity, is the main constraint for a swift flows recovery.
 - Combined transportation capacity of oil tankers in the proximity of the Strait of Hormuz is at 926mb, with empty oil tanker capacity inside the Gulf more than 50% higher than loaded volumes (Exhibit 3).
 - The cancellation of the US sanctions waiver may weight again on imports of Iranian oil that had just started picking up but remain down 0.8mb/d year-over-year (Exhibit 4).
 - While Middle Eastern producers have started reopening their shut-in wells over the last month, Hormuz disruptions could slow down the production recovery.

- We estimate that Persian Gulf crude production was still down 10.5mb/d in June vs. its pre-war level ([Exhibit 5](#)).
- We see two-sided risks to Persian Gulf flows (and hence near-term prices):
 - If the 60-day negotiations continue along with a reinstated waiver on Iranian oil and security reassurances for shippers, we still expect Persian Gulf flows to recover by the end of July, which would require a 6.6mb/d ramp up in Hormuz flows ([Exhibit 6](#)).
 - While not our base case, if the negotiations fail and attacks on tankers escalate along with a potential US blockade of Iranian oil, Persian Gulf flows may decrease further.
- Our global visible stocks counter bottomed mid-June, avoiding all-time lows, and has built by 3.9mb/d over the first three weeks since the Hormuz reopening ([Exhibit 7](#)).
 - The rapid ramp-up in Persian Gulf flows amid still soft Asia oil demand allowed stocks to build as China has been postponing crude imports until very recently.
 - While high-frequency stocks data are noisy and can be revised, we note a 6.5mb/d decline in our global visible stocks counter over the last week driven by a drop in products in transit, likely following recent attacks on Russia refineries.
- The acceleration in drone attacks on Russian refineries, oil tankers, and mid-stream oil infrastructure has kept refinery margins at very high levels despite higher Persian Gulf flows and some pick-up in global ex Russia refinery runs.
 - European diesel margins vs. Brent climbed to \$60/bbl today (vs. \$25/bbl a year ago) following Russia's diesel export ban announcement, while US diesel margins rose to \$75/bbl.
 - Russia refinery outages jumped to 3.8mb/d, suggesting that over 1/2 of Russia refining capacity is offline ([Exhibit 8](#)).
 - Russia refinery runs are down 2.0mb/d year-over-year, weighing both on domestic products supply and products exports ([Exhibit 9](#)).
 - Russia gasoline and diesel retail prices increased by over 10% over the last two months to all-time highs, and fuel shortages are reported in nearly every region ([Exhibit 10](#)).
 - As its effective capacity to refine crude into products has dropped, Russia is redirecting more crude for exports.
 - Russia crude exports are up 1.1mb/d from a year ago, while refined products exports decreased by 0.9mb/d from a year ago, led by diesel (-0.6mb/d yoy) ([Exhibit 11](#)).
 - The ramp up in Russia refinery attacks amid low products stocks and still low Middle East and Asia runs amplifies our high-for-longer products margins view.

1) Persian Gulf Flows

Exhibit 1: Oil Exports From the Persian Gulf Are at 71% of Normal Levels, Down from the 83% June Peak Right Before the First Attack on a Crude Tanker Since the MoU on June 27

Yanbu is on the west coast of Saudi Arabia, bordering the Red Sea and connected to Saudi eastern oil fields via the East-West pipeline. Fujairah lies east (outside) of the Strait of Hormuz and is connected to Abu Dhabi's onshore fields via the Abu Dhabi Crude Oil Pipeline (ADCOP). The Gulf of Oman connects the Strait to the Arabian Sea (southeast). The Kirkuk-Ceyhan pipeline allows northern Iraqi crude to be pumped through Türkiye to the Mediterranean sea. "Normal" flows are assumed to be 20mb/d for Strait of Hormuz and 2025 average for Yanbu (1.4mb/d), Fujairah (1.7mb/d), Gulf of Oman (0mb/d), and Botas Ceyhan (0mb/d).
