

China Property

Global China Summit Takeaways: Mixed views on recent green shoots

At the JPM Global China Summit held in Shanghai last week, we met with various experts & property companies. During the same week, on top of Shanghai, we also conducted channel checks in Hangzhou & Jiaxing. On the recent green shoots (improving secondary prices and transaction volumes), experts and stakeholders hold mixed views. Generally, state-owned developers, KE Holdings, and the Iceberg Index are relatively constructive, while private developers, Centaline, and the Beijing-based policy expert are more cautious. Sentiment is the strongest in Shanghai—supported by leaner secondary-market inventory and potential wealth effects from IPOs & the stock market—followed by Shenzhen; Beijing and Guangzhou remain constrained by higher inventory. Our field checks in Shanghai suggest better sentiment and higher conversion than last year, with some projects testing modest price increases, but the bears argue that the gains may largely reflect pent-up demand and local easing and could fade. **Consensus does not expect an across-the-board recovery; instead, a K-shaped stabilization is possible, with top-tier cities and upgrade/luxury products outperforming.** This is broadly in line with our [base-case forecast](#) (i.e., tier-1 cities to see a soft form of stabilization, but other cities may still see a decline, albeit likely narrower than 2025). Nationwide easing appears unlikely in the near term; policy is expected to remain city-specific, with scope mainly in better execution (e.g., inventory purchases). Alpha opportunities remain with COLI: despite already delivering 14% YoY growth in contracted sales year-to-date, growth could stay positive over the next 1–2 months, by our estimate, supported by launches in Shanghai and Shenzhen (sellable value of new launches will grow >10% Y/Y). We continue to like SOE developers with a strong focus on upgrade demand in tier-1 cities: **COLI, CR Land & Jinmao.**

- **Mixed views on recent green shoots in tier-1 cities:** Despite stabilization in secondary home prices and a surge in secondary transaction volumes in tier-1 cities, stakeholders differ in their interpretations. State-owned developers, KE Holdings, and the Iceberg Index appear to be relatively more constructive, while private developers, Centaline, and a Beijing-based policy expert remain more cautious. That said, even the more constructive voices do not expect a sharp rebound like Hong Kong's recent recovery (where home prices have surged 16% from the bottom). Among the four tier-1 cities, sentiment is most positive in Shanghai, followed by Shenzhen. Views on Beijing and Guangzhou are less bullish due to higher inventory levels. In Shanghai, some experts noted that secondary-market inventory has already fallen to an optimal level—explaining the modest price improvements in recent months—while others attribute the improvement to a wealth effect from IPO activity and a firmer equity market. During our property tour in Shanghai, sales managers reported improved sentiment versus last year (in both core and non-core districts), reflected in higher conversion rates, and some projects are even attempting marginal price increases. Bears argue the near-term improvement may be driven mainly by the release of pent-up demand and local easing measures (e.g., higher loan limits under housing provident fund mortgages), and

therefore may not be sustainable.

- **A nationwide recovery is still unlikely in the near term, but low-tier cities are also not entirely dead:** The prevailing view is that even if tier-1 (and select tier-2) cities stabilize, the broader market will likely, at best, experience a K-shaped recovery, with top-tier cities—especially upgrade/luxury products—performing better. The outlook for lower-tier cities remains weak. However, our tour in Jiaying (a tier-3 city between Shanghai and Hangzhou) suggests selective opportunities: while the overall market is still soft, some developers such as Greentown have been reinvesting, achieving normal margins and solid sell-through. The key support is limited supply of newly built upgrade products in core districts, alongside a substantial decline in land supply. From developers' perspectives, this creates pockets of opportunity in certain tier-3 cities.
- **Low likelihood of nationwide policy easing in the near term:** Over the past 12 months, authorities have stopped using the phrase “stop falling and stabilize” (止跌回稳). In the recent Politburo, they reiterated efforts to stabilize the housing market but omitted “stop falling,” a phrase that previously boosted investor sentiment (notably in September 2024). A Beijing-based policy expert believes this reflects a view that the market is no longer in crisis mode, suggesting policy will remain city-specific. With recent green shoots, the probability of a nationwide easing is even lower. Many experts believe most major policy tools have already been used, though execution could improve (e.g., inventory purchases). On proposals to phase out the pre-sales system, the Beijing-based expert views this as the central government's ultimate direction, but developers generally think implementation will be difficult in the near term without a clearer market recovery.
- **Alpha opportunities remain—COLI.** The current housing market favors developers with strong exposure to tier-1 cities (especially Shanghai and Shenzhen) and a focus on upgrade products. COLI has delivered 14% YoY growth in contracted sales in 4M26 and noted : (1) YoY growth in inquiries/visits remained mildly positive in May; and (2) sellable resources over the next 1–2 months are expected to grow at a double-digit YoY rate, supported by launches in Shanghai and Shenzhen. If the projects launch as planned, we estimate that COLI may sustain positive YoY contracted sales growth over the next 2–3 months (despite a not-low base in June). Asked why land-banking has been slow year-to-date, COLI cited a shortage of high-quality land supply from local governments, and reiterated that it will continue to seek opportunities in top-tier cities (including Hong Kong).

What are the experts saying?

Plenary Session with Ms. QIN Hong (Beijing-based policy expert) & Mr. YANG Xin (CFO of CIFI Holdings)

- **“The worst is over”, but a broad-based recovery is also unlikely:** Both experts agree that the worst time of the housing market has already passed. However, a nationwide recovery remains unlikely in the near term, citing high inventory.
- **Tier-1 cities also diverge:** Experts believe local-level policy easing plays a major role in recent stabilization of secondary sales volume & home prices in tier-1 cities. However, they believe tier-1 cities may also diverge in performance. Overall, experts are most upbeat about Shanghai, followed by Shenzhen. They remain relatively cautious on Beijing & Guangzhou.
- **Tier-3/4 cities likely will remain weak:** Experts expect a K-shaped stabilization where top-tier cities may remain relatively solid, while low-tier cities may remain weak due to population outflows and higher inventories (inventory month in tier-1/2/3 cities is respectively 14/24/34 months).
- **Secondary market will continue to gain market share:** In half of the cities in China, secondary home sales volume already exceeds that of primary homes due to more attractive pricing (developers may not cut prices meaningfully). In the top 20 cities, the secondary market even accounts for 70% of transactions nowadays. This will be the new normal, and the trend is in line with other mature housing markets.
- **Nationwide policy easing is unlikely:** From the government's perspective, experts believe **the KPI for the housing market is price stabilization**, although this may not be achieved until sales volume picks up to digest inventories. The recent data stabilization suggests a low likelihood for the central government to roll out stronger stimulus. In particular, policymakers understand that urbanization (and thus new home demand) is slowing down & thus they have no intention to strongly stimulate the housing market. Also, in some sense, most policy tools may have been utilized already, and thus the key thing to watch out for is execution. For example, despite the call for inventory purchases (收储), the scale has been very limited. Although the government no longer calls for the housing market to “stop falling” (止跌回稳) (which is what the politburo emphasized in September 2024), the experts believe this is because the government believes the worst is over, and thus the latest narrative on the sector is simply “*continue to endeavor to stabilize the market*”. Policy will likely remain city-specific.
- **Scrapping the pre-sale system (预售制度) is the ultimate goal, but it will be a long journey:** The experts believe the government has made it very clear that the pre-sale system needs to be phased out, and ultimately, sales may only be allowed after building completion (现房销售). However, the journey will be long as developers may run into funding issues if the pre-sale system is eliminated abruptly.
- **Unfinished buildings (烂尾楼) are no longer a key issue:** 7.5 million units of pre-sold-but-uncompleted homes have been delivered. Experts believe the task of “ensuring home delivery” (保交付) is mostly completed.
- **Distressed developers are looking for new ways to survive:** CIFI, a non-SOE developer which has gone through debt restructuring, said the company endeavors to switch to adopt a new business model which no longer relies on property development. Rather, CIFI remains proactive in (1) building its recurring income

through rental apartments & property management; (2) engaging more in project management (asset-light model). CIFI believes there are still alternative ways for some distressed developers to stay in the business.

Centaline (Research Director Mr. LIU Yuan)

- **The housing market has entered the phase of “structural but divergent stabilization”:** The expert believes that tier-1 cities will be resilient but nationwide data may remain weak; secondary homes will be stable, but new homes may still be soft.
- **“Do not be overly optimistic”:** The expert noted that, while the recent data improvement in tier-1 cities is real, the expert does not anticipate an across-the-board recovery, in particular: (1) secondary asking prices in tier-1 cities, based on their monitoring, remain soft; (2) the improvement has a barbell structure, led by the smallest units and luxury units; (3) weak income expectations (especially from the middle class) remain a hurdle; (4) high inventory (currently 31 months, vs. the optimal level of 12-18 months).
- **Lots of potential from home provident fund (公积金) mortgages:** Current Tier-1 provident fund loan rates (~2.5%) are close to, or even below, rental yields on some homes (2.5–3%). But the benefit is not fully realized due to age restrictions, strict approvals, and low coverage (a small share of total mortgages). Expanding eligibility (e.g., easing rules for older homes), raising loan caps, and enabling smoother commercial-to-provident refinancing could meaningfully reduce effective purchase costs and accelerate achievement of the key price-bottom signal of positive carry (i.e., rental yield > mortgage rate).
- **2026 outlook:** Centaline expects primary sales volume to drop 7% Y/Y (in line with JPM estimate), of which tier-1/2 cities to drop 3% Y/Y. For secondary sales volume, Centaline expects it will be flattish Y/Y (more conservative than the 5-10% estimate by JPM). For construction, Centaline forecasts new starts/completions to drop 20%/11% Y/Y (JPM estimate: -18%/-19% Y/Y).
- **3 prerequisites for true stabilization:** Centaline quoted 3 scenarios: (1) rental yield (currently <2%) to be higher than mortgage rates (currently 3.05%); (2) price-to-income ratio returns to a reasonable range; (3) inventory months fall to 12-18 months (now 31). *[In JPM view, while we agree all 3 are supportive factors, we believe the most important one is inventory, and we’d put slightly less emphasis on rental yield and affordability, as globally there have been many examples of positive home price growth even if rental yield is lower than mortgage rates and affordability is weak.]*

Iceberg Index (General Manager)

- **From a “sharp decline” to “mild decline”:** The expert believes the Chinese housing market is transitioning into a “mild decline” stage in 2026, with key cities’ average M/M decline narrowing from >1% per month last year to ~0.3% in recent months. The home price index may still see a 9% downside, if we benchmark to the bottom in 2015. The expert believes the sector is building a structural bottom driven by rebalancing of supply & demand.
- **Secondary sales volume in non-core cities is even rebounding stronger:** Post CNY, the secondary sales volume in non-core cities (e.g. Xuzhou, Dongguan) has rebounded >30% Y/Y, even stronger than the 15% Y/Y growth in core cities. The expert believes this is more of a “nationwide repair” rather than just a K-shaped

recovery. This is supported by: (1) wealth effect from an improving stock market; (2) easing in home provident fund (HPF) mortgages, which also helps as HPF mortgages (which have a lower mortgage rate of mid-2%) can cover 80% of listings in low-tier cities.

- **No more “panic selling”:** Typically, secondary listings surge after CNY (seasonality). Last year, the listings jumped substantially after CNY. However, this year, the increase has been very mild. This shows that secondary owners are switching from “panic selling” to “rational balancing”.
- **Shanghai’s improvement is not exactly driven by policy easing:** While other experts may argue that the recent data improvement in Shanghai is driven by the easing of home purchase restrictions and home provident fund mortgages in mid-February, the expert holds a different view, quoting (1) similar easing did not trigger volume/prices to improve in August 2025; (2) a typical transaction period (from building inspection to sales completion) is 4-5 months, and thus the impact of policy easing, if any, would only be reflected later, but the data has already improved.
- **Shanghai’s secondary inventory month is even lower than HK:** The expert pointed out that the number of secondary listings in Shanghai has dropped from 120K units last year to now 85K units (down ~30%). The implied inventory month in Shanghai is only 6, which is even lower than Hong Kong (>7 months). Units with a lower value (<Rmb3 million) have led the price increases. However, in the recent 1-2 months, the expert also noticed that units valued at Rmb3-5 million have also started to see price stabilization. Going forward, the expert believes that stabilization in secondary listings (rather than transactions alone) would be a more critical bottom signal.
- **Shanghai has confirmed a bottom, but a big recovery is still unlikely:** The expert believes Shanghai has already reached the bottom, and now the market’s tone has switched from “neutral with cautious bias” to “neutral”. However, the low willingness to leverage up (as seen by the weak loan demand) still constrains the upside. Therefore, in the near term, the expert would categorize the recovery as “range-bound at the bottom” (横盘修复型底部).

What are property companies saying?

Several SOE developers, private developers and property agencies participated in our China Summit. Below are the key takeaways:

- **Sentiment in top-tier cities (especially Shanghai) has turned more positive:** SOE developers commented that the market sentiment in select top-tier cities has indeed turned better this year. One SOE also quoted that, despite the volume of showroom visits having only been flat Y/Y, the sales volume has improved Y/Y, suggesting a higher conversion rate. This is encouraging and different from previous policy-induced improvements (like 4Q24-1Q25), because back then, despite a surge in the volume of showroom visits, the conversion rate did not actually improve. Therefore, the recent improvement is more organic & shows stronger buyers’ confidence.
- **Not aggressively raising prices:** Despite the recent green shoots, SOE developers said they are not aggressively raising prices (only selectively in some projects in top-tier cities) as they (1) still prefer velocity; (2) are not 100% confident in the sustainability of the recent green shoots. At the same time, they are also not expanding discounts. The pricing strategy will remain market-dependent.

- **Slower land-banking YTD is due to land quality:** SOE developers have generally slowed down in land-banking YTD, and they attribute the reason to be the lower quality of lands being rolled out. Leading SOE developers' land capex budgets for FY26 are actually flattish or even higher vs. FY25. Leading SOEs noted that LGFVs' participation has significantly come down, and thus high-quality land in top-tier cities will likely only be acquired by the top 5-8 SOE developers.
- **Recently acquired projects fetch >15% margin:** Leading SOE developers said the margin of lands recently acquired is generally >15%. If home prices stabilize going forward, impairment risk should come down.
- **KE Holdings expects secondary GTV Y/Y growth to remain positive in 2Q:** KE Holdings expects the primary market GTV to be flat Y/Y in 2Q, but the secondary market GTV may still see positive single-digit Y/Y growth in 2Q. Overall, KE expects a mild stabilization trend in the housing market, while KE will continue to gain market share.

Channel checks in Shanghai, Hangzhou & Jiaxing

Shanghai - sentiment has improved:

- We visited projects in both core districts & non-core districts.
- All sales managers said the sentiment has improved in terms of showroom visits & enquiries, and **the sell-through rates so far have exceeded their internal expectations.**
- Demand for upgrade products remains robust, and **some projects have been marginally raising prices (by 1-2%)** vs. last batches.
- Although primary pricing is typically at a 10-30% premium vs. nearby secondary homes, sales managers remain confident that they can achieve a good sell-through rate as the efficiency rate of new homes has greatly improved (>90%) under the direction of “the 4th generation of housing” (四代宅), with higher ceilings (e.g. 3 meters vs. 2.8-2.9 before) and more effective use of bay windows & balconies. Sales managers generally believe new homes can no longer be directly compared with secondary homes.

Hangzhou - polarized performances:

- We visited two residential projects and spoke to Centaline in Hangzhou.
- The luxury segment has achieved very good sell-through rates this year. For the 6 “land kings” (豪宅六小龙) acquired in 2025 after the lifting of price controls, 3 have already been launched to the market and all are 100% sold out. **The strong performance is partially supported by Hangzhou government's good control of land supply.** Centaline said the government supplies new land by district rotation (板块轮动), ensuring each district will not be over-supplied, and the land match-making mechanism (勾地机制) also helps reduce the risk of over-supply.
- **However, property sales in the mass-market segment have a slower sell-through.**
- Some sales managers attributed the relative weakness to demand being early-exhausted from the “DeepSeek rally” in 1H25 where a lot of Hangzhou-based

employees of the tech/AI companies already bought homes back then.

- Centaline also said the segment of “mid-market upgrade” (中端改善), roughly defined as units valued at Rmb6-10 million, has a severe supply gap in some districts, but since those developers are forced to price higher due to high land premiums, many homebuyers have turned to the quasi-new homes in the secondary market.
- **Centaline believes the divergent performances (good luxury & bleak mass-market) will continue, and secondary home prices in Hangzhou (as a whole) may still mildly decline (down <5%).**
- Fortunately, the market velocity (e.g. weekly showflat visits of 15-20K and transaction of >8K units per month) has remained strong, and thus the market is not very bad either. After the easing of HPF mortgages in late March (e.g. loan amount for families was relaxed from Rmb1.2m to Rmb1.8m), transactions will likely remain strong for a while, although the momentum may slow down in May & June, and bottom in 3Q.
- **Rents have been stable:** Centaline noted that there is a big divergence in rental yields. Some older units in core districts can fetch a rental yield of 3.5-4.0%, while non-core districts may only offer a 1-2% yield. The city average is 2.2%, and Centaline noted that there has been no notable downward adjustment in rents (supported by incoming populations). This reflects that home demand still exists.

Jiaxing - bleak, but not all bad:

- We visited a residential project by Greentown in Jiaxing, which is a tier-3 city located between Shanghai & Hangzhou.
- While the overall housing market is bleak, sales managers said there are still investment opportunities in the luxury/upgrade segment, where sell-through rates have remained healthy. Developers can typically fetch a mid-teens % margin in the area too.
- Thanks to the fast turnover, developers like Greentown have still been investing new lands in Jiaxing. Normally, positive cashflows can be achieved within a year or so, as the duration from land acquisition to pre-sales has largely shortened to just a few months.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss

arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution, or use of the information contained herein (including any reliance thereon) is STRICTLY PROHIBITED. Although this transmission and any attachments are believed to be free of any virus or other defect that might affect any computer system into which it is received and opened, it is the responsibility of the recipient to ensure that it is virus free and no responsibility is accepted by JPMorgan Chase & Co., its subsidiaries and affiliates, as applicable, for any loss or damage arising in any way from its use. If you received this transmission in error, please immediately contact the sender and destroy the material in its entirety, whether in electronic or hard copy format.
