THE LAST ENERGY CRISIS OF 1973 LED TO...

In 1973 in France, Oil fired power plants accounted for 43% of EDF's (private) total power output, and hydro accounted for 32%. In response to the 1973 Oil crisis, The French prime minister, Pierre Messmer went all out on Nuclear. He stated in a speech in March, 1974: 'There is almost no petrol on our territory, we have less coal than England and Germany and much less gas than Holland ... our great chance is electrical energy of nuclear origin because we have had good experience with it since the end of World War II.. ' The country made a massive shift towards nuclear. EDF ordered 16 new PWRs in 1974 alone, doubling its reactor order book, and France went on to build roughly 56–58 reactors between the mid- 1970s and late 1980s, as is visible in the chart below.

Japan was also heavily dependent on Oil prior to the 1973 oil shock, with oil fired power plants accounting for 66% of electricity generation in 1974. While Japan's first commercial nuclear plant started in 1966, post the oil crisis it became a national strategic priority for the country - visible in the chart below. While Fukushima dealt a blow to nuclear in Japan, the plants are being revived again.

THE NEW WAVE - 35 NEW COUNTRIES HAVE PLANS FOR NUCLEAR..NOW ACCELERATED BY THE WAR

At present while the US accounts for the largest installed base for nuclear generation capacity, China has the largest under-construction base followed by India. Incrementally though we are seeing many new countries accelerate plans for a nuclear power plant.

EXHIBIT 2: China accounts for ~50% of total under construction and planned nuclear plants

35 new countries are in the works or are planning to add nuclear power generation capacity. A key challenge for smaller countries in adding a nuclear plant is the size of a typical nuclear plant - as one single plant should not become a big part of the grid (can lead to grid failure in case of outage). The other is nuclear technology - where Russia has taken the lead and has some form an agreement/

understanding with 29 countries already.

CHINA IS A BLUE-PRINT FOR OTHER COUNTRIES ON NUCLEAR EXPANSION...

In the early 1990s, China imported nuclear reactors from France, Canada and Russia along with agreements for technology transfer. Based on the PWR reactor designs it imported and deployed, China turned to make its own indigenous reactors - eg. CPR-1000 and ACPR-1000 indigenous reactors were designed using M310 reactor imported from France. The country has ~60GW of nuclear capacity with a target to reach 110GW by 2030 as per the latest 15th Five-Year Plan. Indigenous reactors have accounted for majority of their additions post 2010, refer image below.

China has one of the lowest nuclear plant construction timeline (5 years vs. global avg of 10 years) and costs. With support from local and provincial governments to the public sector - i) capital raising for projects are relatively easy and at a low cost, ii) the projects are mostly located next to each other in order to benefit from construction economies of scale iii) The projects are also located in coastal areas close to demand centers and also utilize sea-water as coolants instead of large cooling towers, while avoiding earthquake and flood risks associated with in land projects, iv) Indigenization, v) Permitting and land acquisition is critical for this business - China's government structure makes it much easier to do.

We have covered China's success in more detail in the following note - [Bernstein Energy & Power: Nuclear- The Chinese](#)

VALUATION METHODOLOGY**NTPC Ltd**

We value NTPC using DCF method to arrive at our INR430 price target. We forecast the financials till 2070 asset wise - assuming no further thermal/nuclear capacity addition. For renewables, we account for capacity addition till FY40, post which we separately value the renewable business assuming a 12% market share for capacity additions till FY60. We have used a weighted average cost of capital (WACC) of 8.0%. We also allocate a 30% holdco discount to NTPC Green's valuation.

Adani Power

We value Adani Power using DCF method to arrive at our INR177 price target. We assume 24GW pipeline to get added by FY33 and forecast the financials asset wise till assumed 40 year life. Post FY33, we have assumed 1GW/yr addition till FY40. We have used a weighted average cost of capital (WACC) of 10%.

Tata Power

We value Tata Power through SOTP to arrive at our INR 443 price target. We value the i) regulated business (Cost+ generation, transmission and distribution business) at 3x FY27 book value, Mundra cluster (includes Trust Energy Resources and Mundra related coal mines) at 0.5x FY27 book value; ii) Solar PV manufacturing and EPC business at 11x FY27 EBITDA, Haldia plant at 10x FY27 EBITDA; iii) Renewable portfolio (adding ~6GW pipeline till FY28), under-construction transmission projects and Pumped Storage projects (2.8GW addition by FY32) through DCF and other joint ventures at 20x FY27 earnings. For renewables, we account for capacity addition till FY28, post which we separately value the renewable business assuming a ~5% market share for capacity additions till FY60. We have used a weighted average cost of capital (WACC) of 9%.

JSW Energy

We value JSW Energy using DCF method to arrive at our INR 575 price target. We add 3.2GW of coal capacity by FY32, ~3GW/yr renewable till FY30 and ~38GWh of storage (pumped storage + battery storage) by FY36 and forecast the financials asset wise. For renewables, post FY30 we separately value the renewable business assuming a ~5% market share for capacity additions till FY60. We have used a weighted average cost of capital (WACC) of 9%.

RISKS**NTPC Ltd**

Downside:

1. Power demand in India growing slower than our anticipation of 5-6% CAGR
2. Rapid reduction in battery prices reducing the relevance of adding a lot thermal capacity

3. Further disappointment in renewable capacity addition by its subsidiary
4. Nuclear - No traction in nuclear project award

Adani Power

Downside:

1. Rapid reduction in battery prices reducing the relevance of adding a lot thermal capacity
2. Negotiation with Bangladesh government on Godda plant tariff not going in the favor of Adani Power
3. Possible fallout from ongoing legal cases on key individuals of the group in US by [Department of Justice](#) and SEC
4. Power demand in India growing slower than our anticipation of 5-6% CAGR
5. Risk of re-negotiation of long term contracts being signed for thermal power plants

Tata Power

Downside:

1. Mundra PPA with states not getting signed, or even if it does get signed the profits from coal mines getting adjusted to tariff
2. Rooftop solar additions in the country slowing down, and/or govt. subsidy being reduced for rooftop scheme. Faster than anticipated decline in solar PV margins for Tata Power in light of anticipated supply glut and soft demand
3. Challenges in renewables and pumped storage addition due to land and transmission challenges
4. Signing of PPAs for pumped storage projects being a challenge in light of low battery prices

JSW Energy

Downside:

1. Power demand in India growing slower than our anticipation of 5-6% CAGR
2. Risk of re-negotiation of long term contracts being signed for thermal power plants and possibility of delays in thermal projects
3. Renewable and storage addition being slower than anticipated due to land and transmission challenges
4. High leverage and a tough equity market making it challenging for the company to raise additional financing
