J&T Express - H

Initiate at OW: Share price reflects excessive pessimism, but growth and margin inflection in sight

We are initiating coverage of J&T Express with an Overweight rating. Since its October 2023 IPO, J&T's share price has underperformed, reflecting sector price wars in China, initial loss-making status, and external shocks such as recent fuel price volatility. The market has also questioned the scalability of J&T's model outside China and the sustainability of margins in a maturing Southeast Asia, while New Markets were seen as too early-stage to move the needle. However, the business has now pivoted to profitability, is delivering industry-leading volume and margin growth, and is unlocking new synergies through its partnership with SF Holdings. The stock has de-rated to c.10x forward P/E (Non-IFRS), despite a visible inflection in earnings and a proven, exportable business model. We believe this disconnect is compelling: J&T's scalable platform, accelerating New Markets, and cost leadership are not reflected in the current valuation, and a c.20% premium to sector average is justified by c.50% net profit CAGR over FY25-28E (vs. sector 15-20%).

- **A scalable, platform-neutral model is driving share gains and margin expansion, with Southeast Asia remaining the core profit engine but New Markets now a real growth lever.** The company aggregates volumes across all major e-commerce and social commerce platforms, supporting 34.4% market share in SEA (FY25) and double-digit volume growth in New Markets. While investors have worried about yield erosion in a maturing SEA market, J&T's cost leadership and ability to diversify into higher-margin, non-platform business are supporting margin resilience. Meanwhile, New Markets (Brazil, Mexico, Middle East) have reached a profitability inflection, with volumes doubling Y/Y and market share rising, showing the China/SEA playbook is working globally.
- **Profitability inflection is driving robust free cash flow and a clear commitment to shareholder returns.** J&T's disciplined investment in automation and network buildout is now translating into strong operating leverage and margin expansion across all regions. As the asset base matures, capex is trending toward 4-5% of revenue, supporting a step-change in FCF generation. Management has initiated share buybacks, signaling confidence in the business and a willingness to return capital to shareholders as profitability and cash flow improve progressively.
- **Valuation disconnect creates a buy opportunity as profitability inflects and growth accelerates across all regions.** J&T was listed at a high valuation (mid-cycle non-IFRS P/E of 27x one-year forward) but de-rated due to sector headwinds, macro shocks, and skepticism about the scalability of its model. Now trading at c.10x forward P/E, the stock does not reflect the company's c.50% net profit CAGR (FY25-28E), platform diversification, and visible margin improvement in both core and new markets. We see c.37% upside as the market re-rates J&T on sustained earnings delivery, cost leadership, and a proven, exportable business model.

Summary Investment Thesis and Valuation

J&T Global Express is a leading platform-neutral, technology-driven 3PL operator—the market leader in Southeast Asia, a growing player in China, and an emerging challenger in high-growth New Markets (Brazil, Mexico, Middle East). The company's regional sponsor model combines entrepreneurial local execution with centralized technology, enabling rapid, capital-light expansion, while China-built automation and digital management systems are exported across regions, underpinning a structurally advantaged cost curve. Since its October 2023 IPO, J&T's share price has underperformed, reflecting sector price wars in China, initial loss-making status, and external shocks such as recent fuel price volatility. The market has also questioned the scalability of J&T's model outside China and the sustainability of margins in a maturing Southeast Asia, while New Markets were seen as too early-stage to move the needle. However, the business has now pivoted to profitability, is delivering industry-leading volume and margin growth, and is unlocking new synergies through its partnership with SF Holdings. Overweight on J&T.

Our Jun-27 P/E-based PT of HK\$13.0 is based on J&T's FY27 Non-IFRS EPS of US\$0.12, 13x target P/E (vs industry average of 11x, Bloomberg estimates as of Jul 7, 2026) and USD/HKD conversion rate of 7.8.

HK Stock Connect Scheme announcement

Under the provisions of the HK Stock Connect Scheme, we begin forwarding our research on J&T Express – H to Mainland China in Mandarin. Readers of this material should note that given the Chinese translation of this research material is being re-distributed by JPMSC on a delayed basis, from time to time J.P. Morgan Broking (Hong Kong) may have published more updated research material in English pending the Chinese translation of that research material being finalized as required under applicable regulations.

Investment Summary

We initiate coverage on J&T Express (1519 HK) with an Overweight (OW) rating and a P/E-based June 2027 price target of HK\$13, implying c.37% upside. Our target equates to an FY27E non-IFRS P/E of 13x, a c.20% premium to the sector average of c.11x, justified by J&T's c.50% non-IFRS net profit CAGR over FY25–28E (sector: 15–20%). The current c.10x P/E is attractive given J&T's dominant Southeast Asia scale, accelerating New Markets growth, proven China cost advantages, and tangible benefits from the SF Holdings partnership. We forecast c.20% revenue and c.50% net profit CAGR for FY25–28E, with ROE rising from 14% in 2025 to 24% in 2028E.

Since its Hong Kong listing in October 2023, J&T's share price has significantly underperformed, reflecting a combination of sector-wide price wars in China and initial loss-making status. While the stock rebounded in 2025 as the company pivoted to profitability and outpaced industry growth, it has recently de-rated again—now trading at c.10x forward P/E—due to renewed macro concerns, including the Middle East conflict, fuel shortages in Southeast Asia, and investor anxiety over the impact on regional consumption. We believe this dislocation has created a compelling entry point for a business with a fundamentally scalable and repeatable model.

J&T's platform-neutral, technology-driven approach is structurally advantaged for long-term expansion. The company's regional sponsor model blends entrepreneurial local execution with centralized technology and process standards, enabling rapid, capital-light expansion and consistent cost discipline. This model is not only proven in China's hyper-competitive environment but has also been successfully exported to Southeast Asia and New Markets, where J&T continues to gain share and drive down per-parcel costs. The ability to aggregate volumes across all major e-commerce and social commerce platforms—rather than being tied to a single ecosystem—ensures that J&T can capture the full benefit of rising e-commerce penetration, social commerce adoption, and omni-channel retailing. The business is not hitting a wall: in fact, J&T's network density, automation, and digital management systems are creating a self-reinforcing flywheel of scale, cost leadership, and service quality that is difficult for less-capitalized or less-flexible competitors to replicate.

The recently deepened strategic partnership with SF Holdings is poised to unlock significant synergies and accelerate J&T's global reach. This is not a simple capital tie-up: the collaboration is structured for operational integration, with joint investment in critical logistics infrastructure, including automated sorting centers and line-haul vehicles. J&T will be able to leverage SF's established first-mile, cross-border, and warehousing capabilities to further optimize its own last-mile and localized express delivery network, particularly in Southeast Asia and other high-growth regions. The partnership also brings governance alignment, with board representation and a strategic coordination committee, ensuring that both companies can rapidly adapt to new opportunities and challenges in international logistics. In China, the partnership allows J&T to access higher-value service tiers and segments, rather than competing head-on in low-margin, high-volume business, and positions the company to benefit from the industry's shift toward quality and sustainable growth.

J&T's business model is designed for flexibility and resilience, not just scale. The regional sponsor structure empowers local teams to adapt to regulatory, cultural, and market changes, while ongoing investment in automation, self-owned fleets, and digital platforms ensures the network remains both efficient and responsive. This adaptability has allowed J&T to double volumes in New Markets from 2023 to 2025, maintain leadership in Southeast Asia, and steadily improve profitability in China, even as the competitive landscape and regulatory environment evolve. The company's ability to replicate automation, digital management, and franchise models across regions has driven industry-leading cost reductions and margin improvement, supporting a multi-year earnings inflection.

In our view, the current share price does not reflect J&T's superior growth trajectory, margin expansion, and unique ability to scale profitably across multiple regions. The recent de-rating is cyclical, not structural, and has created an opportunity to buy a high-growth, high-ROE logistics leader at a discount. With a proven, exportable business model, a powerful new partnership with SF, and a clear runway for further market share gains, J&T is well positioned to deliver attractive returns as the market re-rates the stock in line with its fundamentals.

Valuation & Share price review

Valuation & Considerations

We value J&T Global Express using a P/E methodology, arriving at a June 2027 price target of HK\$13, which represents c37% upside from current levels. At our HK\$13 price target, J&T is valued at 13x non-IFRS FY27E P/E, 8.9x FY27E EV/EBITDA, and 0.8x FY27E P/S, which is not demanding amid the company's underlying growth profile. A 0.4x FY27E PEG is comparatively favorable vs mature Chinese logistics peers trading at an average of c0.8x, while J&T's FY25-28E revenue CAGR of c.20% and IFRS net profit CAGR of c.50% underscore its superior growth positioning. We believe the current valuation offers compelling risk-reward for investors seeking exposure to high-growth logistics platforms.

Since its October 2023 IPO, J&T's share price has swung sharply—initially trading at a mid-cycle non-IFRS P/E of 27x, then correcting 61% in 2024 on sector price wars and loss-making status, before rebounding 70% in 2025 as profitability and volume growth outpaced the industry. The recent c.7% YTD drop, driven by Middle East conflict and fuel concerns, has pushed the stock to c.10x FY27E P/E, a substantial discount to both history and peers, despite a much stronger earnings outlook.

Share price performance review

J&T Global Express's share price has traced a volatile path since its Hong Kong IPO in October 2023, reflecting both sector headwinds and the company's evolving fundamentals. The stock endured a sharp correction in 2024, falling 61% (vs. HSCI +16%), as fierce price wars in China's parcel sector and ongoing group-level losses weighed on sentiment, despite J&T's expansion across China, Southeast Asia, and New Markets. External shocks, such as the temporary shutdown of TikTok Shop in Indonesia, further amplified investor concerns around growth stability and platform risk.

Momentum shifted decisively in 2025, as J&T's operational and financial performance outpaced the broader parcel and e-commerce industry. The company pivoted to profitability, with non-IFRS profits surging +157%Y/Y in 1H25. In Southeast Asia, J&T reinforced its leadership (market share 32.8% by 1H25), drove a 17%Y/Y reduction in per-parcel costs, and delivered 67.8%Y/Y parcel volume growth—more than double the industry's c.30% pace (according to J&T). New Markets also delivered, with annual volume up 43.6%Y/Y, supported by rising e-commerce penetration and platform partnerships. In China, J&T focused on operational efficiency and margin improvement, aided by the government's anti-involution campaign, which helped stabilize the competitive environment.

The share price rebounded strongly in 2025, gaining 70% (vs. HSCI +31%), and maintained momentum into 2026, underpinned by record parcel volumes (30B in 2025, +22%Y/Y). More recently, the stock has corrected 9% YTD (vs. HSI -8%), reflecting sector-level concerns over fuel price volatility amid Middle East conflicts. Looking ahead, J&T is poised for further growth as it consolidates its network, invests in infrastructure and AI-driven automation, and leverages its China knowledge base to tailor solutions for a diverse client set. The company's rising brand recognition and expansion into non-platform business also present additional upside opportunities.

Positive Drivers

Positive driver #1: J&T’s systematic cost leadership, rooted in China’s operational playbook and scaled globally, is a durable entry barrier and margin driver across all regions.

J&T’s cost advantage is anchored in its ability to replicate and adapt best practices developed in China—one of the world’s most competitive express delivery environments—across Southeast Asia and New Markets. The company’s playbook combines automation, digital management, network optimization, and franchise empowerment, enabling it to drive down per-parcel costs even as industry-wide price competition persists. In FY25, J&T reduced per-parcel costs in China by 6%Y/Y (to US\$0.28), with transport and sorting costs dropping 14%Y/Y and 20%Y/Y, respectively. These measures—optimizing trunk transport, increasing high-capacity vehicles, and investing in full automation—have allowed J&T to maintain positive EBIT despite revenue pressure.

J&T has successfully exported this cost discipline to Southeast Asia, achieving a 15%Y/Y decrease in unit cost in FY25, driven by automation, self-owned fleet expansion, and digital management systems. The company’s scale enables it to maximize asset utilization and negotiate favorable supplier terms, reinforcing its cost advantage. In New Markets, J&T is applying the same systematic approach, investing in automated sorting, route optimization, and last-mile efficiency. This has resulted in positive adj.EBITDA and adj.EBIT for the first time in 2025, with COGS per parcel dropping 12% H/H and 8% Y/Y. Management targets an additional 5–10% decrease in delivery cost in the near term, confident that further room for cost reduction remains.

J&T’s sustained commitment to automation and technology is a key pillar of its cost leadership. In China, the company has pioneered advanced automation and digital management systems, piloting over 900 autonomous vehicles for last-mile delivery and investing in AI-driven tools for sorting, customer service, and network management. These investments have delivered tangible improvements in efficiency and throughput, with per-parcel transport and sorting costs in China falling by US\$0.01 Y/Y in FY25. While per-parcel costs in China are still higher than some peers, management is focused on closing this gap through further automation and smart applications.

Figure 5: J&T Cost per parcel by region (US\$/parcel)

Figure 7: J&T China cost breakdown (US\$/parcel)

Source: J&T Company data (FY25 annual report).

Figure 8: J&T New Market cost breakdown (US\$/parcel)

Source: J&T Company data (FY25 annual report).

In Southeast Asia, J&T has rapidly increased automated sorting machines from 52 to 73 in one year (as of end-1Q26), providing a competitive edge as rising costs lead to market share declines for peers. Digital management systems and data analytics, originally developed for China, have been adapted to local infrastructure and labor markets, ensuring maximum impact. As a result, J&T's daily processing capacity in SEA now exceeds 43MM parcels, underscoring the scalability and resiliency of its automated network.

In New Markets, J&T is localizing mature Chinese automation and digital tools to support both new and existing customers. As of end-1Q26, the company had 11 automated sorting machines operational in Latin America and is piloting autonomous vehicles and other smart logistics solutions. These investments are already yielding results, with positive adj.EBITDA and adj.EBIT achieved in 2025, and management citing automation and technology as key drivers of this inflection point. Technology investment is expected to drive further cost reductions and support higher parcel volumes as these markets mature.

J&T's infrastructure investments and scalable network are fundamental to its operational efficiency and cost leadership. The company's proactive capacity planning, rapid deployment of automated sorting centers, and balanced mix of self-owned and partner-operated assets enable it to handle surging parcel volumes and

deliver high service quality. In SEA, J&T operates 10,800 outlets and 125 sorting centers across seven countries, supported by 1,400 network partners. The delivery fleet is sizeable and flexible, allowing route optimization and cost management even during demand spikes. In China, J&T's network includes 6,500 outlets and 7,200 line-haul vehicles, supporting substantial daily volumes (60.5MM parcels in FY25, +12%Y/Y). In New Markets, J&T has established 2,400 outlets and 49 sorting centers, with a growing fleet focused on supporting both cross-border and local-to-local e-commerce.

J&T's infrastructure scale and operational sophistication create a formidable barrier to entry for less-capitalized or less-experienced competitors, particularly in New Markets. With a global network of 19,500 outlets and 255 sorting centers as of end-1Q26, supported by a robust and flexible delivery fleet, J&T is uniquely positioned as a preferred partner for global e-commerce platforms seeking logistics providers with national reach, high capacity, and the ability to support both cross-border and local fulfillment. As platforms like Temu, TikTok, and Mercado Libre expand and localize their operations, J&T's infrastructure backbone stands out as a key source of differentiation—enabling the company to capture incremental growth, defend market share, and sustain industry-leading service standards across diverse and rapidly evolving markets.

Positive driver #2: J&T's regional sponsor model is a scalable, capital-efficient engine for rapid market entry, local adaptation, and sustained network control across diverse geographies.

J&T's global expansion is powered by its differentiated regional sponsor model, which blends the entrepreneurial agility and local expertise of franchisees with the operational discipline, technology, and brand standards of a scaled logistics platform. This model, rooted in China's hyper-competitive express delivery sector, has proven highly effective in enabling J&T to scale quickly and flexibly across Southeast Asia and New Markets, while maintaining centralized control over critical infrastructure and service quality.

The regional sponsor model empowers experienced local entrepreneurs to operate and expand J&T's network within defined territories, investing their own capital and leveraging deep local relationships. This structure not only aligns incentives—regional sponsors often hold equity stakes in J&T—but also reduces the capital burden on headquarters, allowing for faster, asset-light expansion compared to traditional direct operation models. As a result, J&T can enter new markets rapidly, adapt to local regulatory and competitive dynamics, and scale coverage without heavy upfront investment.

A key advantage of this model is its ability to combine local decision-making and real-time market adaptation with the benefits of centralized technology, data analytics, and process standards. Regional sponsors bring critical knowledge of local culture, infrastructure, and regulations, minimizing risks and accelerating market penetration. J&T and its sponsors can jointly tailor the operating approach for each market—whether direct operation, network partners, or hybrid—enabling both early-stage entry and long-term optimization. As networks mature, J&T can further

integrate regional entities, as seen in Thailand and Indonesia, to drive operational synergies and efficiency.

The effectiveness of the regional sponsor model is evident in J&T's rapid rise in China, the world's most developed and competitive express delivery market. Entering in 2020, J&T achieved 50MM peak daily parcel volume within three years—faster than any peer—and by 1Q26 was handling c.60MM daily parcels, establishing itself as a top-five player. The model enabled swift integration of acquisitions like Best Express China and allowed J&T to compete on both cost and service quality, narrowing the gap with leading incumbents and building a sustainable platform for further growth.

By combining local entrepreneurship with centralized scale, J&T's regional sponsor model delivers the flexibility, speed, and control needed to win in both emerging and developed markets, making it a core catalyst for the company's ongoing global expansion and market share gains.

Source: Company data from J&T, ZTO, STO, YTO and Yunda (FY25 annual reports).

Figure 15: J&T Market Share Gain by Region

Source: J&T Company data (FY25 annual report).

Positive driver #3: J&T's SEA leadership is underpinned by scale, platform-neutrality, and the ability to capture both category growth and industry consolidation, with TikTok as a key volume driver.

J&T Global has established itself as the leading 3PL service provider in Southeast Asia, operating across seven countries and maintaining the No. 1 market share for six consecutive years. The company's outperformance is anchored in its ability to aggregate volumes across platforms, leverage a dense network (10,800 outlets and 125 sorting centers as of 1Q26), and deliver high-quality service at scale. In 2025, J&T handled 7.7B parcels in SEA (+68%Y/Y), well ahead of the market's already robust 39% growth, lifting its market share to 34.4% (+5.8ppts Y/Y). 1Q26 volume growth remained strong at +80%Y/Y, highlighting the flywheel effect of network density and cost leadership.

SEA's e-commerce and express delivery markets continue to expand rapidly, with e-commerce retail transaction value reaching cUS\$304B in 2025 and expected to show a 16% CAGR through 2030 (according to J&T). E-commerce penetration rose to 22% in 2024 (+3.9ppts Y/Y) and is poised for further gains, while express parcel volume reached 22B in 2025 (+29%Y/Y) and is projected by J&T to hit 29B in 2026. The competitive landscape is consolidating, with the top five players now controlling 76% of the market (vs. 48% in 2022), which structurally favors scaled, tech-enabled operators like J&T.

A critical incremental driver is the rapid growth of social commerce, especially TikTok Shop, whose SEA GMV reportedly doubled to US\$45.6B in 2025. TikTok is now J&T's single largest customer in SEA, accounting for over 50% wallet share of TikTok's logistics spend. This partnership provides a powerful and relatively predictable demand stream, supporting network utilization and operating leverage. However, management notes that c.80% of SEA revenue comes from Chinese platforms (including TikTok and Temu), which, while supporting volume growth, also creates a concentration risk.

J&T is actively expanding its non-platform business—targeting social commerce sellers, SMEs, brands, and individual customers—which offers higher profit margins and helps optimize customer mix. While non-platform parcels currently account for less than 10% of SEA volume, this segment is a strategic lever for future margin expansion and risk mitigation. The company's established cash-on-delivery infrastructure and ability to deliver industry-leading service (delivery times below two days, lost parcel rate down 13%Y/Y in 2025) further reinforce its competitive edge and reputation as the partner of choice for e-commerce and social commerce players across the region, in our view.

Source: J&T Company data (FY25 annual report).

Positive driver #4: New Markets are emerging as a powerful engine for J&T's next phase of profitable growth, with platform partnerships and local execution driving rapid scale and margin inflection.

J&T's New Markets—Brazil, Mexico, Saudi Arabia, UAE, and Egypt—are rapidly evolving into a high-potential growth engine, supported by accelerating e-commerce adoption, favorable demographics, and the entry of major global and Chinese platforms. In 2025, e-commerce retail transaction value in these regions reached US\$162B (+22%Y/Y), with J&T projecting a 16% CAGR through 2030, while express parcel volumes hit c.5B (+9%Y/Y) and are poised to nearly triple to 13B by the decade's end (according to J&T). Despite global macro uncertainty, these economies remain resilient, and digitalization is unlocking vast new addressable markets for logistics leaders. Critically, e-commerce penetration remains relatively low (tracking to c.35% by 2029 according to J&T, providing a long runway for volume and revenue growth.

The competitive landscape in New Markets is still fragmented and underdeveloped, with local players lacking the scale, technology, and capital to compete nationally, and international giants like FedEx and DHL focused on premium segments. This creates a significant opportunity for a scaled, tech-driven operator like J&T to establish a leadership position by offering reliable, cost-effective, and comprehensive logistics solutions tailored to both global platforms and local merchants. Average delivery prices remain well above China or SEA, and service quality is inconsistent—further reinforcing the value of J&T's proven playbook.

J&T's approach in New Markets has been methodical and replicable, leveraging its China/SEA experience to rapidly build infrastructure, localize operations, and secure anchor partnerships. Since entering these markets in 2022, J&T has established over 2,000 outlets and 44 sorting centers, and deployed 10 sets of automated sorting machines as of Dec-25. In 2025, J&T handled 404MM parcels in New Markets (+44%Y/Y), with market share rising to 7.5% (vs. 6.1% in FY24). The company is now a logistics partner of choice for leading Chinese e-commerce platforms (TikTok,

Temu, SHEIN) and regional giants like Mercado Libre, which has been instrumental in driving volume growth as platforms shift from cross-border to local-local models. Notably, TikTok's local-to-local parcel volume in Brazil scaled from a few thousand to over 100,000 per day in 3Q25, and J&T's 1Q26 New Markets volume doubled Y/Y (+c.101%), reflecting the impact of these partnerships and ongoing investment.

Financially, New Markets have reached a key inflection point. Revenue grew 51%Y/Y to US\$870MM in 2025, outpacing volume growth and reflecting the segment's ability to capture higher-value business. J&T achieved positive adjusted EBITDA in New Markets for the first time (US\$1.6MM in 1H25 vs. a loss of US\$7.8MM the prior year), and full-year adj. EBITDA reached US\$48MM (vs. a US\$43MM loss). Unit economics are trending positively, with revenue per parcel rising to US\$2.15 (+5%Y/Y) and cost per parcel decreasing to US\$1.79 (-8%Y/Y), even as the company continues to invest in network expansion and customer acquisition. The focus on automation, route optimization, and last-mile efficiency—core elements of J&T's China playbook—has enabled the company to offset cost pressures and drive sustainable profitability as scale ramps.

Positive driver #5: J&T's disciplined execution and strategic partnerships are enabling stable share gains and margin improvement in China.

China remains the global benchmark for e-commerce and express delivery, with total logistics spending reaching US\$2.7T in 2023 and projected to rise to US\$3.3T by 2028 (according to J&T). The market's depth is reflected in e-commerce GMV of US\$2.2T in 2025 (+7.4%Y/Y), online penetration of physical goods at c.26% (far above global peers), and social commerce alone reaching US\$754B in 2024. Parcel volumes remain robust, hitting 199B in FY25 (+c.14%Y/Y), with the State Post Bureau projecting 214B in 2026. Critically, the regulatory environment has shifted decisively since 2H25, with the anti-involution campaign driving rational pricing, improved ASPs, and a sector-wide focus on service quality and profitability over pure volume.

J&T has capitalized on this more rational landscape, leveraging targeted M&A (Best Express, Fengwang) and a deepening partnership with SF Express (now a c.10% shareholder) to secure platform access, optimize its network, and accelerate integration. As of 1Q26, J&T holds a c.12% market share (No. 5 in China), handling c.22B parcels in 2025 (+11%Y/Y) and c.5.4B in 1Q26 (+8%Y/Y). The company's focus has shifted from pure volume to quality growth, with an emphasis on higher-value, less price-sensitive segments, branded customers, and value-added services. This pivot has supported a sustained profitability turnaround: J&T's China business, loss-making at IPO, turned profitable in 1H24 and has delivered positive adj. EBIT since, reaching USD81MM in 2H25 as pricing stabilized and cost initiatives took hold.

Operational excellence and cost leadership remain central to J&T's China strategy. The company's franchise (Tongda) model enables rapid scale-up and flexible cost management, while ongoing investment in automation (338 automated sorting machines as of Mar-26), network consolidation, and technology (including unmanned vehicles and cloud warehousing) is driving further efficiency. J&T reduced its cost per parcel from USD0.30 in FY24 to USD0.28 in FY25 (-c.7%Y/Y), supporting profit resilience even as industry pricing remains competitive.

J&T's strategic customer relationships and platform access further reinforce its competitive edge. The company has secured positions with all major e-commerce platforms (Taobao, Douyin, Pinduoduo, Kuaishou) and is expanding into new segments such as reverse logistics, individual parcels, and value-added services. Investments in brand building, network partner training, and service quality are designed to enhance customer loyalty and improve mix.

Importantly, J&T's China business serves as a "training camp" for operational excellence, with best practices and technology exported to overseas markets. This exportable model has been instrumental in winning business from global e-commerce leaders as they expand internationally, positioning J&T as a credible and resilient player both at home and abroad.

Figure 34: J&T China: parcel volume and Y/Y growth trend

Source: J&T Company data (1Q26 quarterly report).

Positive driver #6: The strategic partnership with SF unlocks powerful synergies, accelerates J&T's global reach, and enhances its competitive edge in both China and international markets.

J&T's partnership with SF, cemented through mutual shareholdings (SF now owns 10% of J&T; J&T holds 4.29% of SF), is designed to go far beyond capital alignment and is structured to drive deep operational integration. The collaboration enables joint investment in critical logistics infrastructure—such as automated sorting centers and trunk line vehicles—directly enhancing J&T's efficiency and network coverage, especially in international markets. For J&T, this means leveraging SF's established first-mile, cross-border capacity, customs clearance, warehousing, and parcel locker infrastructure to further optimize its own last-mile and localized express delivery network in Southeast Asia and other high-growth regions. The combination of SF's cross-border and warehousing strengths with J&T's robust local delivery network is poised to deliver faster, more cost-efficient end-to-end solutions, a critical advantage as Chinese enterprises accelerate their global expansion.

The partnership's governance structure ensures ongoing strategic alignment, with a dedicated coordination committee and direct involvement from both founders. SF's board representation at J&T further cements the relationship, providing J&T with access to SF's strategic direction and operational best practices, while ensuring that joint initiatives can be rapidly developed and adapted to new opportunities and challenges in global logistics.

In China, the partnership is highly complementary: SF's premium parcel business and J&T's economic express services create opportunities for line-haul integration and resource sharing, allowing both companies to focus on quality and sustainable growth. Rather than competing head-to-head in low-margin, high-volume segments, J&T can leverage the collaboration to access higher-value service tiers and segments where pricing is rational and service standards are tightly controlled.

Looking ahead, the partnership opens up new pathways for J&T into developed markets such as Europe and the U.S., where SF's international infrastructure and forwarding capabilities provide a meaningful head start. J&T also aims to expand its product offerings into non-e-commerce and time-sensitive delivery, leveraging SF's extensive pick-up/drop-off point network. This aligns with the broader industry trend of diversifying beyond pure e-commerce parcels into higher-margin segments such

as supply chain, cold chain, pharma, and intracity logistics, positioning J&T for long-term, sustainable growth on a global scale.

Risk Factors

Risk driver #1: J&T's group profitability and growth remain structurally exposed to China's margin dynamics and competitive intensity

While J&T is the clear leader in Southeast Asia and an early mover in New Markets, these regions together still represent a modest portion of the global express delivery opportunity. In 2025, SEA and New Markets accounted for c.11% and c.2.5% of China's express parcel volume, respectively, and contributed c.37% and 7% of group revenue, with China still making up c.55% of the total. J&T's position in China is that of a disciplined follower, with c.11% market share and limited pricing power amid intense competition from larger incumbents. Despite recent profitability improvements, J&T's gross profit per parcel and unit costs in China still lag leading peers, and the company's ability to further improve margins is constrained by industry-wide price sensitivity, customer mix, and the risk of renewed price wars. The anti-involution policy has brought some rationality, but its long-term effectiveness is uncertain, and any weakening of regulatory enforcement or renewed price aggression could erode margins and slow J&T's path to sustainable profitability.

Figure 35: J&T Express FY25 Revenue Contribution by Region

Source: J&T Company data (FY25 annual report).

Risk driver #2: Margin pressure and yield erosion in Southeast Asia as the market matures and service differentiation narrows

J&T's scale leadership in SEA paradoxically increases its vulnerability to pricing attacks as the market matures. Service differentiation has largely evaporated, with all major players now offering similar delivery times (2–3 days), making price the primary lever for merchants and consumers. This commoditization of speed, combined with the risk of aggressive pricing by competitors with excess capacity, could strip J&T of pricing power and force margin concessions. The company's reliance on the regional sponsor model, while a source of flexibility, may also limit its ability to cut prices as deeply as fully integrated competitors in a deep price war, given the need to preserve sponsor profitability.

Risk driver #3: Execution and profitability risks in New Markets due to early-stage scale, high investment, and operational complexity

New Markets (Brazil, Mexico, Saudi Arabia, UAE, Egypt) are a key growth engine but remain at an early stage of operational maturity, with fragmented logistics infrastructure, inconsistent service quality, and a competitive landscape dominated by local players and international giants focused on premium segments. J&T's aggressive investment in network buildout and automation has enabled strong volume growth (+44% Y/Y in FY25), but the segment's path to sustainable profitability is highly sensitive to scale, customer mix, and ongoing cost discipline. Cost per parcel in New Markets remains elevated (US\$1.79 in FY25 vs. US\$0.48 in SEA and US\$0.28 in China), and further cost reduction will require successful execution of automation, route optimization, and a gradual shift toward higher-margin customers. Regulatory, macroeconomic, and geopolitical risks—including licensing changes, tariff increases, and economic volatility—add further uncertainty to the outlook.

Risk driver #4: High customer concentration and platform insourcing risk threaten volume stability and pricing power

J&T's revenue is highly concentrated among major Chinese and regional e-commerce platforms, with the top five customers accounting for 31% of group revenue and c.80% of SEA revenue derived from Chinese platforms (TikTok, Temu, SHEIN). Platform insourcing is a growing threat: Shopee, once a major customer, has shifted 80–85% of its volume in-house in SEA and Brazil, and continues to invest in its own logistics capabilities. This trend increases the risk that J&T could lose volume or pricing power as platforms internalize more logistics or shift volume to their own networks. The TikTok Shop partnership, while a major growth driver, also creates a “single-point-of-failure” risk if regulatory bans or platform strategy changes occur. In New Markets, customer concentration around Chinese platforms and Mercado Libre also exposes J&T to abrupt volume shifts if platform strategies or trade policies change. The pace and effectiveness of J&T's diversification into non-platform business will be critical to reducing this risk.

Risk driver #5: Technology and cost-reduction playbook faces local adaptation challenges and diminishing returns outside China

J&T's China playbook—large-scale automation, high-capacity fleets, and digitalized management—has driven significant cost and efficiency gains, but its effectiveness in SEA and New Markets is constrained by local factors such as fragmented infrastructure, lack of standardized addressing, and high cash-on-delivery ratios. In SEA, only c.30% of the network is currently run by network partners, and the transition to a franchise model is a long-term goal. In New Markets, the franchise model is still being piloted and adapted, with success dependent on careful partner selection and local market realities. Local competitors and platform-owned logistics arms are also investing in automation and digitalization, raising the bar for efficiency and service quality. Execution missteps or slower-than-expected adaptation could erode J&T's competitive advantage and delay the realization of targeted cost savings.

Risk driver #6: Geopolitical, regulatory, and trade policy risks could disrupt operations and cross-border parcel flows

J&T operates in 13 countries, each with its own regulatory framework governing express delivery, foreign investment, data privacy, labor, and e-commerce. The company's use of contractual arrangements (VIE structures) in China and Indonesia

exposes it to regulatory changes that could force restructuring or loss of control. In New Markets, ongoing regulatory changes, local protectionism, and tariff increases (e.g., in Brazil and Mexico) could impact market access, cost structure, and volume growth. The company's reliance on the "de minimis" loophole for cross-border parcels is a direct headwind, as governments in Brazil, Mexico, the US, and the EU move to close this gap and impose punitive tariffs on Chinese e-commerce goods. Any tightening of trade policy or regulatory enforcement could materially impact J&T's package volumes and profitability in affected regions.

Figure 36: Shopee E-commerce GMV and Gross Orders

Company Background

Company Background and Evolution

Founded in Indonesia in 2015 by Mr. Jet Li (a former executive at OPPO Electronics), J&T Global Express has rapidly evolved from a regional disruptor into a global logistics enterprise. The company was purpose-built to serve the booming e-commerce sector in Southeast Asia, differentiating itself early on with a "365-day service" ethos and a network designed to handle the high-frequency, fragmented volume of online retail.

J&T's growth has been driven by the sharp rise of e-commerce in emerging markets, its early-mover advantage in underserved regions, and a continued focus on operational efficiency and technology adoption. Since its inception, J&T has evolved from a single-country operator in Indonesia to a global logistics platform spanning 13 countries. The company entered Vietnam and Malaysia in 2018, the Philippines, Thailand, and Cambodia in 2019, and Singapore and China in 2020. In 2022, J&T made its first foray outside Asia, launching operations in key Latin American and Middle Eastern markets. As of 2025, J&T is the number one 3PL delivery operator by parcel volume in Southeast Asia, a top-five player in China, and a fast-growing challenger in its New Markets.

The "Regional Sponsor" Business Model

A key differentiator for J&T is its innovative "Regional Sponsor" business model, which blends the entrepreneurial drive and local expertise of franchisees with the operational discipline and technology of a scaled logistics platform. Under this

model, J&T partners with regional sponsors—local entrepreneurs who invest in and operate critical parts of the network, including sorting centers, line-haul transportation, and, in some cases, pickup and delivery outlets.

The regional sponsor model enables J&T to rapidly scale its network, adapt to local market conditions, and align incentives through equity participation and performance-based rewards. Country headquarters set overall strategy and provide technology, brand, and operational support, while regional sponsors execute on-the-ground operations and manage network partners. This structure allows J&T to maintain strong operational control, drive cost efficiencies, and achieve deep market penetration with lower capital intensity compared to a fully direct-operated model.

The model has been successfully replicated across Southeast Asia and China, and is being adapted for New Markets, with a mix of direct operation and franchise/partner models depending on local regulatory and market conditions.

Figure 37: J&T's Regional Sponsor Model.

Source: J&T Company prospectus, as of Oct 16, 2023.

Business segments

J&T's business is organized into three primary segments:

Southeast Asia: This is J&T's largest and most established region, covering Indonesia, Vietnam, Malaysia, the Philippines, Thailand, Cambodia, and Singapore. In full-year 2025, J&T handled approximately 7.66 billion parcels in Southeast Asia (+67.8%Y/Y). The company is the market leader by parcel volume in the region, benefiting from high e-commerce penetration, strong volume growth, and a dense, integrated network.

China: J&T entered China in 2020 and has rapidly become a top-five player. In full-year 2025, the company handled 22.07 billion parcels in China, up 11.4%Y/Y. The China segment is highly competitive, with J&T focusing on operational efficiency, network integration, and expanding its presence in both urban and rural markets.

New Markets: Comprising Brazil, Mexico, Saudi Arabia, UAE, and Egypt, this segment represents J&T's next frontier of growth. In full-year 2025, J&T handled 403.9 million parcels in New Markets, 43.6%Y/Y growth. The company is leveraging its experience from China and Southeast Asia to build out infrastructure and partnerships in these high-potential but early-stage markets.

Business Mix: J&T is primarily an express delivery operator, with the vast majority of its revenue and parcel volume coming from domestic express delivery services across its core markets. Cross-border logistics — including small parcels, freight forwarding, and warehousing solutions — remains a minor portion of overall revenue, serving as a complementary offering to support e-commerce partners' international expansion. By the end of 2025, management also indicated that it is raising brand recognition through non-platform channels and retail/reversal packages, which now account for less than 10% of total volume.

Financial analysis and forecasts

Income Statement

J&T has demonstrated strong financial growth, with FY23-25 revenue CAGR at 17%, driven by solid volume growth and market share expansion across all 3 business regions. We forecast FY25-28E revenue to further grow with a 20% CAGR, on the back of high base, driven by solid growth across all 3 geographical segments (Southeast Asia, China, & New Markets). After being listed in Oct 2023, the company has demonstrated improvement, with EBITDA turned profitable starting in 2H2023, while EBIT and net profits also turned profitable starting in 2024. With the increased scale of economy and strong momentum, we forecast its non-IFRS profits to grow at a 50% CAGR during FY25-28E.

In Southeast Asia, we forecast revenue growth with a 23% FY25-28E CAGR, driven by J&T's faster-than-industry volume growth as well as the market expansion on the back of the e-commerce boom. According to J&T, Southeast Asia e-commerce retail transaction value is forecasted to grow 21%Y/Y in 2026, and at 16% CAGR in 2026-2030E. Total parcel volume is forecasted to grow by 29%Y/Y in 2026, and at 18% CAGR in 2026-30E. Historically, SEA's parcel volume growth is c5.2x of its GDP growth. J&T's volume growth has been stronger than the overall market trend, with 1Q26 volume up by over 80%Y/Y, and the company continues to gain market share. Amid competition and expansion, we expect unit revenue per parcel to ease slightly. Cost per parcel is also expected to go down as management indicates overseas investment in infrastructure and delivery channel will pay off. In the short term, J&T faced some cost pressure driven by oil price hikes since the Middle East conflict, but we believe J&T's unit cost is overall manageable as fuel cost accounts for 20-30% of transportation cost, and transportation cost accounts for 20-30% of total cost. We expect J&T's adj EBIT margin in SEA market to improve from 9% in 2026E to 11% in 2028E.

Figure 41: Southeast Asia: Industry parcel volume growth vs GDP growth

Source: World Bank, <https://data.worldbank.org/>, as of Jul 7, 2026, J&T FY25 annual report.

In China: China remains a large base for J&T. According to State Post Bureau (SPB), industry parcel volume achieved 199B in 2025, and according to J&T, China's e-commerce retail transaction value grew 7% to US\$2,149B. Historically, China's parcel volume growth is c4.6x of GDP growth. We expect China's industry parcel volume to grow at 6% %Y/Y in 2026, as the anti-involution campaign weighed on the volume of extra-low-price parcels. In the longer term, we expect 3-5%

industry growth in 2026-30E. J&T views China as the training hub and aims to achieve similar parcel volume trend as industry. We forecast J&T's China revenue growth at a 4% CAGR in 2025-28E, in tandem with the overall industry landscape, and blended revenue per parcel to stabilize amid China's "anti-involution" campaign. We anticipate J&T's China business margin to improve slightly as it continues to invest in automation, sorting hubs, and truck capacity.

Figure 42: China: Industry parcel volume growth vs GDP growth

Source: World Bank, <https://data.worldbank.org/>, as of Jul 7, 2026, China State Post Bureau, as of Jul 7, 2026.

In New Markets, we forecast a revenue CAGR of 75% in 2025-28E, as J&T is still in the early stage of market penetration and management indicates the company is showing solid progress in terms of capitalizing on local demand. Apart from Middle East and LATAM, J&T aims to strategically enter EU/US markets in the next 1-2 years, creating further upside to its New Markets TAM. We expect J&T's New Markets parcel volume to grow by 90% Y/Y in 2026, supported by robust growth in countries like Brazil and Mexico. We believe J&T is well-positioned to capitalize on its localized warehouse and delivery network, while partnering with major ecommerce players as a third-party logistics provider.

Cost and margin projections: J&T has demonstrated significant margin improvement since listing, with EBITDA turning positive in 2H23 and net profit turning positive in FY24. We forecast GPM to expand from 12% in FY25 to c15% in FY28E, driven by: (i) operating leverage in SEA as volumes scale; (ii) cost per parcel reductions from automation (management targeting 5-10% annually); and (iii) improving mix as higher-margin non-platform parcels grow. We forecast net profit margin (non-IFRS) to expand from 3.5% in FY25 to 7.2% in FY28E as the company further benefits from scale economics and efficiency improvement driven by automation.

ROE trend analysis: We expect J&T Global Express's non-IFRS based ROE to show strong and consistent improvement as the company scales its operations and enhances profitability. From an ROE of 14% in FY25, we forecast a rise to 18% in FY26E, 20% in FY27E, and 24% in FY28E. This upward trend reflects expanding underlying profitability driven by operational leverage, cost efficiencies and revenue growth. We expect the company's asset turnover to remain largely stable, while the equity multiplier gradually declines with a rise in shareholder's equity.

Balance Sheet and cash flow forecasts

J&T demonstrates healthy working capital management. The overall cash conversion cycle shortened from 2.7 days in 2023 to 2.1 days in 2024, before rising to 2.5 days and indicating enhanced efficiency. In 2025, the efficiency was characterized by low inventory turnover (0.7 days), and a narrow gap between receivables turnover (25 days) and payables turnover (23 days). We forecast J&T to maintain or further improve its inventory turnover and efficiency as it expands the high growth markets.

Table 5: J&T Working Capital Summary

Working Capital	2023	2024	2025	2026E	2027E	2028E
Inventory days	1.4	1.1	0.7	0.6	0.7	0.7
Trade receivable days	22	22	25	26	27	26
Trade payable days	21	21	23	23	24	23
Cash conversion cycle	2.7	2.1	2.5	3.5	3.6	3.7

Source: J&T Company data (FY25 annual report) J.P. Morgan estimates.

J&T's cash generation ability is strong, achieving positive operating cashflow since its listing, outpacing net profits. We expect the company to lower its net gearing in 2026E (from 32% to 16%) and turn into net cash position in 2028E.

J&T's capital expenditure is expected to be US\$700-800MM in 2026, and the company noted its capex will be well-controlled as it utilizes an asset-light model when entering new markets. Management indicates the majority of capex will be used for investing in core infrastructure, like sorting centers, automation systems, and

trucks, etc., aiming to strengthen cost savings for the medium-to-long term. We project capex level to remain stable and reduce to 4-5% of revenue, as the company expands its business scale in emerging markets while maintaining an effective capital allocation strategy for efficiency.

Shareholder returns

During the 1Q26 briefing, J&T's management indicated it will continue with share buyback programs, reflecting confidence in the company. Since initiating its first on-market buyback plan in October 2024, J&T has repurchased c179MM Class B shares for a total of cHK\$1.4B, including 99MM shares (cHK\$900MM) in 2026 YTD.

In September 2025, the Board approved a second buyback plan with a maximum budget of HK\$1B and authority to repurchase up to 889.7 million Class B shares. J&T believes that the shares have been traded at a price that undervalues the Group's performance and intrinsic value and that its financial position – including cUS\$2B in cash and US\$1.1B in operating cash flow in FY2025 – enables continued buybacks without compromising business investment. In June 2026, J&T announced another round of Class B shares repurchase plan with total amount of HK\$2B, reflecting the company's confidence in its operations and enhanced shareholder returns. We view the buyback proposition as a credible and growing component of the shareholder value proposition, particularly as J&T's profitability inflects upwards.

Investment Thesis, Valuation and Risks

J&T Express - H (*Overweight; Price Target: HK\$13.00*)

Investment Thesis

J&T Global Express is a leading platform-neutral, technology-driven 3PL operator—the market leader in Southeast Asia, a growing player in China, and an emerging challenger in high-growth New Markets (Brazil, Mexico, Middle East). The company's regional sponsor model combines entrepreneurial local execution with centralized technology, enabling rapid, capital-light expansion, while China-built automation and digital management systems are exported across regions, underpinning a structurally advantaged cost curve. Since its October 2023 IPO, J&T's share price has underperformed, reflecting sector price wars in China, initial loss-making status, and external shocks such as recent fuel price volatility. The market has also questioned the scalability of J&T's model outside China and the sustainability of margins in a maturing Southeast Asia, while New Markets were seen as too early-stage to move the needle. However, the business has now pivoted to profitability, is delivering industry-leading volume and margin growth, and is unlocking new synergies through its partnership with SF Holdings. Overweight on J&T.

Valuation

Our Jun-27 P/E-based PT of HK\$13.0 is based on J&T's FY27 Non-IFRS EPS of US\$0.12, 13x target P/E (vs industry average of 11x, Bloomberg estimates, as of Jul 7, 2026) and USD/HKD conversion rate of 7.8.

Risks to Rating and Price Target

Downside risks to our rating and price target include: (1) continued structural margin compression in China, if anti-involution weakens; (2) slowdown of SEA ecommerce GMV growth and increasing competition from competitors like SPX etc; (3) execution and profitability slippage in New Markets as heavy upfront investment and slower-than-expected localization of franchise models prolong the path to scale; and (4) geopolitical, regulatory, and trade-policy shocks could increase compliance costs and directly pressure cross-border parcel flows and demand.

J&T Express - H (1519.HK, 1519 HK) Price Chart

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC (“JPMS”) acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries (“J.P. Morgan Private Bank”), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst’s name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst’s name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

Morgan Markets Limited (“JPMML Ltd”) which is authorised and regulated by the Financial Conduct Authority. Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 (“the FPO”); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as “UK relevant persons”. This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA’s policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: [J.P. Morgan EMEA - Research Independence Policy](#).

U.S.: J.P. Morgan Securities LLC (“JPMS”) is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst’s involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan’s current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own

independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution, or use of the information contained herein (including any reliance thereon) is STRICTLY PROHIBITED. Although this transmission and any attachments are believed to be free of any virus or other defect that might affect any computer system into which it is received and opened, it is the responsibility of the recipient to ensure that it is virus free and no responsibility is accepted by JPMorgan Chase & Co., its subsidiaries and affiliates, as applicable, for any loss or damage arising in any way from its use. If you received this transmission in error, please immediately contact the sender and destroy the material in its entirety, whether in electronic or hard copy format.
