

AI Series #58: Kimi K3 Model Capabilities an Unexpected Surprise for Market

Moonshot AI released the first open 2.8T model **K3** which ranked No. 3 in Artificial Analysis and behind Fable5 and GPT-5.6 Sol (Max). It ranked No. 1 in Frontend Code Arena. We view the breakthrough as unexpected and drives sector innovation amid fast model iterations. According to **Token Expenditure Index**, it reflects continued appeal for a cost-efficient model ([Exhibit 3](#)), which is positive for China models with strong cost performance ([Exhibit 2](#))

In this report, we provide investors with data points on model pricing by companies, pricing comparison between China and US, model intelligence from Artificial Analysis, token consumption in OpenRouter, Token Expenditure Index trends and other industry data for analysis.

Moonshot AI released the first open 2.8T model and ranked top positions across different metrics ([Exhibit 5-6](#)). K3 is built for long-horizon coding, knowledge work and reasoning. Highlights (1) 1M context and native multimodal; (2) No 3 in Artificial Analysis Index and behind Fable5 and GPT-5.6 Sol (Max); (3) No. 1 in Frontend Code Arena; It has leading positions in coding, general agents and visual agents vs global peers. The full model weights will be released on 27 Jul.

Cost performance vs global peers. We compare the input / output price of K3 with global peers on its cost performance ([Exhibit 1](#)). K3 is built on Delta Attention and Attention Residuals. Highlights (1) Delta Attention enables up to 6.3x faster decoding in million token contexts; (2) Attention Residuals deliver 25% higher training efficiency at less than 2% additional costs. The architectural updates leads to (1) activates 16 out of 896 experts effectively when paired with Stable LatentMoE framework; (2) 2.5x improvement in overall scaling efficiency vs K2.

Silicon Data LLM Token Expenditure Index : The week of 12 Jul showed continued softness. The index ([Exhibit 3](#)) is weighted by where usage is concentrated (e.g. expenditure goes up when demand shifts towards premium models). On the other hand, media reports (e.g. *The Information, Economic Observer*) highlight tech and internet companies set upper limit on token consumption among employees. According to our checks, the index ranged from 1.57 to 1.61 the week of 12 Jul (vs 1.63 to 1.65 the week of 5 Jul), vs 2.04 on 31 May. Based on Artificial Analysis, China models DeepSeek, Qwen, Kimi, MiniMax and Zhipu are highly cost-efficient vs US models API cost is a fraction vs US models ([Exhibit 2](#)), thanks to former's refined architecture such as MoE (Mixture of Experts), attention mechanism (Group-Query Attention GQA, sparse attention) and MLU (Model FLOPs Utilization).

OpenRouter: Token consumption up vs prior week. Based on analysis of the week of 6 Jul (vs week of 29 Jun) ([Exhibit 4](#)), number of weekly tokens consumed increased by 12.6% at 52.6tn. In terms of ranking, DeepSeek V4 Flash ranked no 1, followed by Xiaomi MiMo-V2.5 and MiniMax M3.

BAT, KC, AI labs and Kling are Beneficiaries on Rising AI Demand. We expect the surge in token consumption on rising demand for AI models and agents to benefit CSPs like **Baidu, Alibaba, Tencent (BAT), Kingsoft Cloud (KC), AI labs and Kling**. According to analysis from Artificial Analysis: (1) there is a narrowing intelligence gap between US and China models; (2) API cost is just a fraction vs US benefiting from MoE, linear attention, and MFU; (3) Coding, Workspace scenario and mid- to long-form content should see significant opportunities ahead

China vs US comparison

AI Models

According to OpenRouter, token consumption went up significantly in Feb-26 due to (a) a **surge in adoption of coding / agents**, which allows people using AI from "to chat" to "to work". It connects with large models which can be deployed locally or on servers, which allows you to automate

According to OpenRouter, rising adoption of Coding / Agents and release of high-performance and cost-efficient China models are driving token consumption

workflow through natural language chat; (b) **release of a number of high-performance and cost-efficient models** which include Kimi K2.5 (Jan-26), M2.5 (Feb-26) and GLM-5 (Feb-26).

The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.
