APAC Energy Transition

Implications: When data center backlash meets US grid queue reform

Social tensions over data center development (Hannah Lee's [report](#)) likely led to the FERC (US regulator)'s recent proposed reform on grid queueing to emphasize protection against ratepayer cost shifts. Alongside our US team's (Mark Strouse's [report](#)) callout on BTM (behind the meter) technology and transmission from the FERC reform, we highlight the importance of BTM's role in obtaining social acceptance. Within the APAC Energy Transition value chain, 1) APAC ESS; 2) APAC Electrical and Power Gen Eqp; and 3) APAC Nuclear SMR themes are related. Within these themes, we highlight the following OW stocks in APAC: **Doosan Enerbility**, **Weichai A/H**, **Yingliu**, **Hyosung Heavy**, **Sungrow**, **CATL-A** and **LGES**.

From social pushback to regulation change, FERC has moved to conduct reform aimed at easing grid queueing for large loads by announcing its Large Load Integration Order. In addition to grid queueing, it also emphasizes preventing cost shifts to ratepayers, so household power users are not effectively cross subsidizing power infrastructure investments driven by data center growth. This follows a prolonged public debate and rising social concerns about the pace and scale of data center buildout and its broader impacts on local communities and electricity bills.

The FERC reform calls for BTM and transmission. The reform outlines five key areas, with the above-mentioned cost transparency as one. Within the others, our US analyst highlights behind the meter generation technologies, along with transmission hardware and grid stabilization providers as beneficiaries. While energy storage systems may not be an obvious behind the meter winner, takeaways from our recent expert call ([link](#)) suggest that ESS is critical for more sophisticated behind the meter microgrid applications.

Concerns about utility prices may cement an even stronger case for BTM. BTM generation, if adopted as a bring your own generation approach, can reduce the burden on the public grid. This may help gain social buy-in, in our view. This adds a further layer to the existing speed to power rationale driving data centers toward BTM solutions. With regulatory developments still ongoing, this could be a long tailwind for BTM adoption and a broader paradigm shift. For reference, a bipartisan bill aims to protect ratepayers from cross subsidizing data center driven supply tightness ([link](#)).

How does this translate to the APAC value chain? Within the APAC Energy Transition value chain, 1) APAC ESS; 2) APAC Electrical & Power Gen Eqp and; 3) APAC Nuclear SMR themes are related. SMR nuclear is a mid-term story, but has the optionality on BTM deployment due to its flexibility. Within these themes, we highlight the following OW stocks: **Doosan Enerbility** (covered by Sonny Lee), **Weichai A/H** (covered by Karen Li), **Yingliu** (covered by Jenny Qiu), **Hyosung Heavy** (covered by Stephen Tsui), **Sungrow** (covered by Alan Hon), **CATL-A** (covered by Rebecca Wen) and **LGES** (covered by Parsley Ong). **Social considerations:** Our report includes analysis of the social pillar and the positive social impact of ESS, SOFC fuel cells, and SMRs, which may help build social buy-in.

[Tightness and Tribulations: Ten Fresh Takes on Clean Energy Supply](#)

[APAC 2026 Nuclear Outlook: the Race to Power the Future](#)

FERC Large Load Integration also emphasizes preventing cost shifts to ratepayers

On Jun 18, the US regulator FERC issued Large Load Integration Order to all six regional grid operators, in response to DOE (Department of Energy)'s Advance Notice of Proposed Rulemaking (ANOPR). In addition to the goal of expediting the interconnection of massive electricity loads (>20MW) such as AI data centers, the order also carries clauses to justify existing tariffs or file reforms governing large load interconnection for data centers. The order identified five areas of reform:

- (1) Transmission service application and study processes;
- (2) cost transparency and ratepayer cost-shift prevention,
- (3) co-location and BTM generation accommodation,
- (4) new transmission services for flexible large loads, and
- (5) study processes for generation serving electrically proximate loads. Grid operators have 60 days to respond with tariff justifications or revisions.

In addition to the reforms focused to enhance speed to power, the order also called for cost transparency and ratepayer cost-shift prevention. Indeed, there has been ongoing social concerns and debate on this subject. Please see Hannah Lee's report ([link](#)) for a detailed discussion.

Concerns on utility prices may make an even stronger case for BTM

Our US analyst Mark Strouse ([link](#)) highlighted BTM generation technologies and transmission hardware/grid stabilization providers as likely to benefit from the FERC's orders. We would also highlight that in addition to speed-to-market, BTM (in the form of data centers providing their own on-site generation) may mitigate some of the public concerns and backlash, in our view. Such an approach can remove the burden on the public grid to some extent. Note that there is currently a bipartisan Bill being discussed to protect Americans from paying for Data Center Development ([link](#)). This may become a longer-term tailwind to support the BTM solution.

Figure 1: Traditional utility business models are coming under question due to large loads

Source: J.P. Morgan.

Implications for the APAC Energy Transition Value Chain

Across APAC Energy Transition, **APAC ESS** and **APAC Electrical & Power Gen equipment** are related to BTM and transmissions. The **APAC Nuclear SMR Export** theme, though long-term, has the flexibility for BTM application, given its nimble size. Within these themes, we highlight the following OW stocks: **Doosan Enerbility** (covered by Sonny Lee), **Weichai A/H** (covered by Karen Li), **Yingliu** (covered by Jenny Qiu), **Hyosung Heavy** (covered by Stephen Tsui), **Sungrow** (covered by Alan Hon), **CATL-A** (covered by Rebecca Wen) and **LGES** (covered by Parsley Ong).

Speed to market is another key rationale for behind the meter power solutions, particularly for data centers where delivery timelines are critical. In multiple U.S. grid regions, behind the meter setups can be brought online faster than relying solely on front of meter alternatives, giving operators greater certainty on commissioning schedules. In some cases, the faster ramp can also improve project economics, translating into a better NPV through the time value of money.

Table 2: Lead time for selected generation equipment

Technology	Lead Time (months)	Size per Unit (MW)
H-Class CCGT (Combined-cycle gas turbine)	36-60	600-1000
Aeroderivative gas turbine	18-36	30-60
Industrial gas turbine	12-36	5-50
Small CCGT	18-36	40-100
Medium speed combustion engine	15-24	7-20
High-speed combustion engine	15-24	3-5
Fuel cells	3-4	0.325

ESS: Clean, Quiet Alternative That Helps Support Stable Power Prices

Social consideration:

Power markets globally often experience significant intraday load volatility. In the U.S. New England region and Australia's New South Wales region, for example, daily peak versus trough demand can differ by roughly 50%. In developed markets, where a portion of electricity is traded on the spot market, this volatility can translate into periods of supply tightness and higher spot power prices at peak hours. Energy storage systems help as a time shifting mechanism, charging during trough periods and discharging during peak periods, which can ease tightness and, in some cases, temper spot power price increases during peaks.

While the majority of ESS use case is on microgrid interaction, ESS has a better social profile in the traditional back-up use cases in comparison with diesel generators. ESS is carbon free and has better noise emission. There have been cases of communities raising concerns about noise pollution surrounding data centers ([link](#)).

Sometimes overlooked, ESS is becoming the standard as part of the DC BTM power solution: We hosted a call with a US expert with experience in data center power solutions. He sees ESS becoming the standard for on-site generation from a micro-grid perspective. ESS is complementary to other alternative power sources, such as gas turbines and Solid Oxide Fuel Cell (SOFC) fuel cells, instead of being competitive with them. By integrating BESS with these technologies, especially in micro-grid setups, operators can coordinate power generation to run fossil fuel generators at optimal levels, improving efficiency and resilience. This also allows fully exploiting roof-top solar resources. The expert highlighted that he has seen a use case of 6-8 hours for a sophisticated micro-grid with both onsite gas turbine/SOFC and renewables.

Such commentary well coincides with Tarek Hamid (N. America Corporate Credit - Energy)'s findings ([report](#)) that data center build-out seems to be finding whatever solution they can. Data center power solutions being deployed are using a mix of different solutions (e.g. gas turbine, reciprocate engine of different brand and size) all in the same site.

SOFC Fuel Cell: Low Emissions and Fuel Flexible Power that Can Ease Permitting

Social considerations: Solid oxide fuel cell systems stand out from other alternative power solutions due to their feedstock flexibility. Once green hydrogen becomes commercially available at scale, SOFC can run on it as a carbon-free power source. SOFC also generate electricity through an electrochemical process rather than combustion, which means that even when using fossil fuels such as natural gas, emissions are typically lower and NOx and SOx emissions are near zero. These environmental attributes can support a smoother permitting pathway and, in turn, enable faster time to power.

Case study on how AIDC lifts adoption for SOFC fuel cell

We placed hydrogen fuel cells on our transition technology radar in our inaugural AP Energy Transition report in August 2025. The pace of adoption has exceeded our expectations. The ongoing pursuit of behind-the-meter (BTM) power solutions has positioned SOFC fuel cells as a prominent use case for supplying direct current (DC) electricity, highlighting their growing significance in decentralized energy applications. For reference, global fuel cell demand for vehicle use was ~1GW in 2024. Weichai (one of the companies producing fuel cells for DC) alone is targeting a 1GW capacity by 2030. There is also a pronounced impact on technology. PEM fuel cell is preferred for vehicle application but now, SOFC is preferred for DC application.

A revival in the adoption cycle

Prior to the emergence of DC's use case, global fuel cell electric vehicle (FCEV) sales trends were mixed, largely due to hydrogen's ongoing struggle to achieve economic viability. According to the IEA World Energy Outlook 2025, the installed base of FCEVs is expected to surpass 100,000 units; SNE Research data ([link](#)) indicates approximately 98,000 cumulative FCEV sales from 2017 to 2024, with 12,900 units registered in 2024, down 20% year-on-year. Hyundai and Toyota remain leaders in the FCEV market, though Toyota primarily deploys PEM fuel cells. Assuming an average vehicle fuel cell capacity of 70 kW, the estimated demand in 2024 was around 1 GW. At the FY25 briefing, Weichai raised its 2026 AIDC diesel engine sales target to 3,500–4,000 units (up from 2,600–2,800), confirmed robust momentum across diesel and gas engines, and reiterated its commitment to scaling SOFC production and commercialization, with SOFC capacity targets set at 30 MW for FY26E and 200 MW for FY27E. These developments clearly demonstrate an accelerating trend in adoption.

Figure 7: Weichai Power's SOFC capacity targets vs. vehicle fuel cell demand base in 2024

Source: Global FCEV Monthly Tracker, Weichai Power, expert view, J.P. Morgan estimates.

Figure 8: Global FCEV sales trends

Source: Global FCEV Monthly Tracker – Jan 2025, SNE Research.

DC gives rise to SOFC technology

There has been notable disruption in the technology choice for fuel cell applications, particularly in vehicles, where PEM fuel cells are considered superior. PEM technology is favored for automotive use because it offers fast start and restart capabilities, operates at lower temperatures, and delivers higher practical power density. However, for data center applications, SOFC fuel cells are better suited due to their higher efficiency during steady-state operation. Many advantages of PEM, such as rapid cycling and lower temperature, are less relevant in the data center context, making SOFC a more appropriate option for this use case.

Key research by JPM Asia Industrial team (led by Karen Li)

Weichai Power- H/A: Raising FY27+ profit forecasts by >10%, driven mainly by better margin/mix as Power & Energy gains weight. The team lifted the AIDC engine volume assumption to 3,500 units in FY26E (low end of the company's 3,500–4,000 target range), citing clearer deliverability milestones and a faster pathway into overseas prime power (gas). We remain OW with an updated DCF which implies c.25x 1Y forward P/E, viewed as undemanding versus global peers (Caterpillar c.35x; Cummins c.30x). While consensus is moving up, our earnings remain ~8% ahead, leaving room for further revisions as the power mix becomes more visible. For details, please refer to our report ([link](#)).

Expert feedback is directionally consistent. In our expert call on AIDC onsite power solutions, the expert expects Weichai's AIDC engine shipments to reach 3,500–4,000 units in 2026, skewed to 2H, alongside scaling domestic and export capacity. On SOFC, the expert highlighted an aggressive capacity roadmap (30MW in 2026; 200MW in 2027; 600MW in 2028; 1GW by 2030), supported by supply-chain readiness, cost management, and technical capabilities spanning gas engines and SOFC. The expert also pointed to customer traction for Weichai's integrated onsite offering (gas engines + SOFC + storage). For details, please refer to our report ([link](#)).

Nuclear SMR: Enhanced Safety Features and Flexible Mid-Term BTM Optionality

Social considerations: Relative to a typical Gen III pressurized water reactor, some small modular reactor designs that use advanced fuels can offer a higher safety threshold. One example is the high temperature gas cooled reactor SMR design, which uses TRISO (TRi-structural ISotropic particles) fuel particles. In simple terms, TRISO fuel is built with a ceramic enclosure around the fuel kernel. According to energy.gov, these particles can retain radioactive fission products at temperatures as hot as molten lava, which supports enhanced safety performance and a lower risk of radioactive fallout. In addition, SMR has the nimbleness and flexibility similar to the BTM solution in the mid-term.

Case study on how AIDC development accelerates R&D on SMR nuclear

The AI revolution is reshaping global energy demand as hyperscale data centers require clean, reliable, and uninterrupted power to support energy-intensive workloads while meeting net zero commitments. This is accelerating interest in nuclear power, especially Small Modular Reactors (SMRs), as a longer-term source of firm, dispatchable power amid grid constraints and rising volatility in AI data center electricity demand. Momentum is building into 2026, supported by hyperscaler-backed R&D, 23GW of nuclear project deals since October 2024, and a more supportive U.S. policy backdrop following the increase in 2050 nuclear capacity targets from 300GW to 400GW. This shift creates opportunities for APAC nuclear players, particularly Korean EPC and equipment firms, with **Doosan Enerbility** standing out for its expanding order book and exposure to large-scale nuclear, SMRs, and gas turbines. Meanwhile, China's Linglong One, a 300MW SMR, could disrupt the global nuclear supply chain if modular construction, shorter build times, and scale benefits help lower costs, especially for localized, island, and emerging-market applications.

Hyperscalers turn to SMRs to fuel the next generation of AI data centers

The AI revolution is rewriting the energy playbook as AI and hyperscale data centers have become the driving force behind demand for clean, reliable power. Tech titans, led by their net zero commitments and the need for uninterrupted energy, are increasingly turning to nuclear—especially Small Modular Reactors (SMRs)—to power the next wave of digital infrastructure.

Going into 2026, SMR development is accelerating globally - please see table below for details. Hyperscalers (i.e. Meta) are supporting the R&D progress of SMRs; this is partly due to the power constraints of AI data centers (AIDCs), while SMRs are being actively explored by hyperscalers as a longer-term option to provide firm, dispatchable power for next-generation data centers, especially as traditional grid connections and gas generators struggle to keep up with extreme power swings from AI workloads.

Figure 9: Recent developments with respect to SMR and its ties with data centers

Date	Event	Tie with Data Centers
6/19/2026	Korea-US Strategic Investment Corporation launched to manage \$350bn US investment, with focus on energy (including nuclear) and shipbuilding. Japan's 3rd US investment tranche (\$25bn) expected for NuScale SMR projects.	NA
6/19/2026	Sweden selected Rolls-Royce SMR for ~1.5GW new capacity; Estonia passed nuclear law for Fermi Energia's 600MWe SMR (Samsung C&T as potential EPC); US NRC environmental review for Holtec's SMR-300 at Palisades; TerraPower's Natrium in UK GDA.	NA
6/19/2026	Antares Nuclear's Mark-0 microreactor achieved first criticality at Idaho National Lab; Holtec's SMR-300 environmental review at Palisades; NY launches Nuclear Reliability Backbone, evaluating 5GW advanced nuclear (including SMRs).	NY's policy paper references advanced nuclear for grid reliability, which can support data center loads.
6/19/2026	TerraPower's Natrium reactor: Meta selected TerraPower after RFP; reactor can ramp from 345MW to 500MW+ in 10 minutes; strategic partnerships with KHNP, SK, Hyundai; NOAK LCOE could reach sub \$90/MWh, \$60/MWh with ITCs.	Direct tie: Meta selected TerraPower for its data center power needs.
5/22/2026	US NRC completed environmental assessment (FONSI) for Dow/X-energy's Xe-100 SMR in Texas; DOE awarded \$94mn+ to expedite SMR deployment; HDEC named EPC for Holtec's SMR-300 in Rwanda; MOU with TerraPower for Natrium deployment.	Dow/X-energy project is for industrial site, not data centers; TerraPower's Natrium has data center relevance.
5/8/2026	EIA projects US nuclear share to rise to 17.5% in 2027, then decline; SMRs seen as attractive for rapid scalability and cost optimization, especially for commercial/industrial demand (including data centers).	Explicit mention: SMRs seen as attractive for data centers due to modularity and scalability.
4/29/2026	Doosan Enerbility: SMR partnerships progressing, dedicated SMR plant to break ground in 3Q26; highest exposure to global SMR market among Korean EPCs.	NA
4/24/2026	TerraPower began construction of 345MWe Natrium plant in Wyoming (completion by 2030); Meta to fund up to 8 Natrium units (2.8GW) by 2035.	Direct tie: Meta funding Natrium units for data center power.
3/27/2026	Japan's \$40bn investment in GE Vernova-Hitachi SMRs in US; Doosan Enerbility has highest exposure to global SMR market; Korea-Japan collaboration opportunities in SMR deployment.	NA
1/23/2026	Meta announced agreements to support/expand US nuclear projects (up to 6.6GW) to meet AI/data center demand; partnerships with TerraPower and Oklo for next-gen reactors.	Direct tie: Meta's nuclear projects are to power data centers and AI workloads.

Source: Company announcements, J.P. Morgan Research.

In the past two years, hyperscalers have inked a flurry of nuclear deals (23GW of nuclear projects since Oct 2024), leveraging their emission-free profile to meet soaring

electricity demand without compromising their carbon footprint. The lifting of US nuclear capacity targets by President Trump in 2025 from 300GW to 400GW by 2050 has also provided a tailwind and suggests investment of ~US\$600bn.

Figure 10: US operational and planned nuclear capacity vs industry forecast and gov't target

Korean Nuclear Firms Gain Global Momentum Through EPC and SMR Partnerships

As the US raises its nuclear ambitions and the industry pivots toward Small Modular Reactors, APAC's established expertise and robust supply chains are set to play a pivotal role. Russia, China, Korea, France, and the US all offer GW-scale nuclear designs with export potential, although client preferences on partnerships typically depend on security considerations and strategic priorities.

Korean corporates appear increasingly embedded in these global buildouts through EPC and supply-chain participation. Examples include Samsung C&T being cited as a potential EPC contractor in Estonia, and HDEC's visible engagement in Europe (including co-hosting a supplier symposium with Westinghouse in Amsterdam tied to the Netherlands' two planned new reactors). In parallel, Korean firms are positioning for SMR-related order flow via partnerships and MOUs (e.g., HDEC with Holtec and TerraPower; Doosan's role on key nuclear island components for Rolls-Royce SMR).

Korean equipment providers in particular stand out for their expertise, cost-competitive exports and track record in project delivery and could benefit from the renewed momentum in developed markets and the growing demand for SMR equipment. We maintain a constructive view on Korea's nuclear EPC sector. Our top pick is Doosan, led by its rapidly expanding order book and well-balanced portfolio across large-scale nuclear plants, SMRs, and gas turbine projects.

Case study of China's SMR Linglong One

Per our discussion with a nuclear expert from Shanghai Electric during our China Energy Evolution Tour, Linglong One is described as a 300MW small pressurized water reactor (SMR) that is among the most advanced domestic small-reactor designs in terms of progress, with modularization as a key advantage. Compared to large commercial nuclear units (often cited as having ~10-year build cycles), it is expected to have a shorter construction timeline and simpler installation and plant construction due to smaller equipment, potentially reducing some equipment and raw-material requirements. Its current levelized cost of electricity (LCOE) is viewed as high for the Hainan Changjiang demonstration project (>RMB 1/kWh) because many development and first-of-a-kind costs are concentrated in the pilot unit; the expectation is that costs could decline as deployment scales and costs are amortized. Importantly, such LCOE is indeed quite competitive on a global comparison.

The expert saw Linglong One as more flexible for localized power supply—including areas beyond the main-grid reach—and potentially suitable for island applications; it is suggested it is unlikely to be sited inland. Finally, it is seen as potentially attractive to some Southeast Asian countries with smaller territories, though no orders have been reported yet, and discussions/exchanges (including with Türkiye) have taken place.

We believe that it's possible that China may disrupt the current nuclear power supply chain, through exporting the SMR (i.e. Linglong One) to the emerging markets, considering a potential decline of the LCOE of the SMR in the mid term.

Figure 12: LCOE comparison among different types of nuclear reactors and CCGT in a few emerging markets

Unit: Usd/MWh

Note: CCGT refers to combined-cycle gas turbines.

Potential Technology Disruption Ahead

Nuclear fusion	AIDC is moving into nuclear fusion, underscored by Microsoft signing a power purchase agreement with Helion Energy, a Sam Altman-backed fusion startup. We see fusion's competitive landscape as a two-horse race between the US and China, with divergent playbooks and risk-reward profiles. The US leads in facilities and private sector activity across multiple technical approaches, while China's state-led model is catching up through accelerating technology investment. China's R&D focus may expand beyond tokamaks into high temperature superconductors and field reversed configuration.
Space solar for AI	As AI's bottleneck shifts from compute to power, developers are exploring space-based solar power as a speed to power solution for AI deployments. Meta's partnership with Overview Energy is a key example, targeting delivery of up to 1GW of space-sourced solar energy to Earth by 2030, with an orbital demonstration in 2028. The concept uses satellites in geosynchronous orbit transmitting energy via low intensity infrared light to existing terrestrial solar infrastructure, improving dispatchability and potentially expanding SBSP's addressable market (link).
Sodium-ion battery	According to our EV Battery analyst Rebecca Wen, emerging battery technologies could be relevant for AIDC energy storage, where power, rapid response, redundancy, and high frequency micro-cycling matter more than long duration. She highlights sodium ion batteries as a potential fit given strong high C rate performance for fast load swings, wide temperature tolerance, and favorable safety characteristics. She also notes the potentially attractive cycle life and recyclability, with cost economics improving as the pricing gap versus LFP continues to narrow.

APAC Energy Transition Dashboard

What happened in 1H26?

In our inaugural report ([link](#)), we identified five APAC energy transition value chains as seeing supply tightness (or emerging as such). Some of these have seen strong market interest and hypothetical performance in 1H26, with one (APAC Submarine Cable / Inter-Grid Connection theme) seeing hypothetical outperformance of the MXAP Index by ~40% and one (APAC Electrical & Power Gen Equipment theme) seeing largely in-par performance with the MXAP Index.

- Key players in the **APAC Nuclear SMR Export** theme (+11% vs. MXAP's +21% from end 2025 to 24 June 2026): Korean nuclear stocks under our coverage have underperformed the benchmark in the past month (KEPCO -3%, Hyundai E&C -8%, Doosan Enerbility -8%, and KEPCO E&C -11% vs. KOSPI +24% m/m), as expectations have moderated amid muted news flow on new large-scale nuclear EPC order wins ([link](#)).
- Key players in the **APAC Electrical & Power Gen Equipment** theme (+20% vs. MXAP's +21% from end 2025 to 24 June 2026), driven by protracted supply tightness in electrical & power gen equipment (up ~50% from end 2025 to early May 2026), while offset by a broader rotation out of AI power infrastructure plays lately (down ~20% from early May to 24 June 2026).
- Key players in the **APAC ESS** theme (-8% vs. MXAP's +21% from end 2025 to 24 June 2026). Despite the strong ESS demand outlook, elevated lithium carbonate prices may hurt the margin profile for downstream ESS plays. In 4Q25, discussion of AIDC use cases has resulted in market hype but orders have yet to follow through in 1H26.
- Key players in the **APAC Submarine cable / inter-grid connection** theme (+60% vs. MXAP's +21% from end 2025 to 24 June 2026): On the offshore wind side, China targeted cumulative offshore wind grid-connected capacity to reach 100GW. Meanwhile, a few players in the basket have seen meaningful share price pickup due to exposure to optical cable, while optical cable prices are elevated due to supply constraints and strong demand, particularly from data centers and defense ([link](#)).

- Key players in the **APAC Uranium miners** theme (-28% vs. MXAP's +21% from end 2025 to 24 June 2026): There was a significant pullback in 2Q26, as the Middle East conflict may have disrupted the sulfuric acid supply, while shortage of acid supply may lead to production reduction and thus negative to uranium miners' earnings outlook, per CGN Mining (1164 HK, Not Covered).

Key catalysts and events in 2H26:

Theme	Key events and catalysts in 2H26
APAC Nuclear SMR Export theme	1) Further progress on Korea-led nuclear projects overseas, including Vietnam and the US; 2) new nuclear projects from big tech companies and governments; and 3) a revision of the Korea-US Nuclear Cooperation Agreement granting Korea greater opportunities; 4) With the Department of Energy announcing Usd17.5bn USD loan to help finance 10 large-scale commercial reactors, project and order flows may improve in the 2H.
APAC Electrical & Power Gen Equipment theme	1) Regulatory developments in the US on protecting ratepayers may have implications for different types of power solutions, a key event to watch in the 2H of the year; 2) Korea's 12 th Electricity Plan may surface towards year-end, affecting various companies within this theme.
APAC ESS theme	1) More AIDC ESS orders to follow in 2H26. Based on our expert call, the AIDC ESS order is likely back-end loaded due to the sequence of DC development. With some ESS integrators starting to get orders in the 1H, we think order flow should improve in the 2H; 2) Lithium price movement.
APAC Submarine Cable / Inter-Grid Connection theme	1) Order flow in China, following the regulator issuing the 2030 off-shore capacity for the first time; 2) price momentum for optical fiber as quite some submarine cable producers are exposed to optical fiber for data center use cases.
APAC Uranium Miners theme	1) With long-term contract prices now above spot prices, spot price momentum in the 2H is a key catalyst; 2) Disruption in sulphuric acid supply has introduced operational challenges for some. Resolution of the sulphuric acid supply following the HoS re-opening is a key event for those; 3) US DOE Section 232 uranium report.

Analyst Certification: The Research Analyst(s) denoted by an “AC” on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an “AC” on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst’s personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst’s compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst’s analysis was made in good faith and that the views reflect the Research Analyst’s own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to Doosan Enerbility, Hyosung Heavy Industries, LG Energy Solution or related entities.
- **Manager or Co-manager:** J.P. Morgan acted as manager or co-manager in a public offering of securities or financial instruments (as such term is defined in Directive 2014/65/EU) of/for LG Energy Solution or related entities within the past 12 months.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of LG Energy Solution or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: Doosan Enerbility, Hyosung Heavy Industries, LG Energy Solution or related entities.
- **Client/Investment Banking:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as investment banking clients: LG Energy Solution or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: Doosan Enerbility, Hyosung Heavy Industries, LG Energy Solution or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: Hyosung Heavy Industries, LG Energy Solution or related entities.
- **Investment Banking Compensation Received:** J.P. Morgan has received in the past 12 months compensation for investment banking services from LG Energy Solution or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from Doosan Enerbility, LG Energy Solution or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from Doosan Enerbility, Hyosung Heavy Industries, LG Energy Solution or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of Doosan Enerbility, Hyosung Heavy Industries, LG Energy Solution or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

J.P. Morgan Equity Research Ratings Distribution, as of April 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	51%	37%	12%
IB clients**	83%	79%	74%
JPMS Equity Research Coverage*	49%	39%	13%
IB clients**	94%	93%	85%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst’s involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan’s current opinions or judgment as of the date of the material only and are therefore subject to change without

notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
