HNA EUV will likely be adopted first in DRAM than for logic due to lower cost of exposure for DRAM. A common concern from investors is that HNA is too expensive (as TSMC said so) and won't be adopted anytime soon. However, what's rarely discussed is the big difference between DRAM and logic: DRAM die size is much smaller than logic, and hence only uses 1 mask, while logic mostly needs 2 masks due to larger die size (stitching). The mask changing slows down throughput by 23% (135WpH vs. 175WpH), and the cost of HNA exposure for DRAM is cheaper and easier to justify. So we believe DRAM will likely adopt HNA in 2027 in 1d, when LNA EUV double patterning is needed, earlier than logic.

Logic adoption of HNA is also in sight. The high cost of HNA exposure is largely associated to the low tool availability of 80-85%, while LNA is close to 95%. However, HNA tool availability is improving faster, and is targeted to reach ~95% by 2030. WpH is also expected to increase from 135 to 175 even with 2 masks. While the litho equipment cost of HNA exposure is currently ~3x LNA for logic, the gap will narrow to ~2x by 2030. Considering other costs and complexity of double patterning, it's justifiable for logic to migrate to HNA before that. We expect Intel to be the first to adopt HNA in 2028, while TSMC will be slower, but still likely to adopt in 2030.

Rising litho intensity from 24% in 2025 to 26% in 2028. When HNA replaces LNA multiple patterning, the other cost of double patterning (etch, depo, cleaning etc) can be greatly reduced. Hence litho intensity is expected to rise with HNA, just like how litho intensity increased when LNA EUV replaced DUV (ArFi) multiple patterning. We forecast DRAM litho intensity to increase from ~20% in 1z to ~30% in 1d, due to increase in EUV layer count and adoption of HNA in 1d. While logic litho intensity stabilizes at ~32% in N2 and A14 due to limited adoption of HNA, we expect it to rise in A10. Mostly driven by DRAM, we forecast litho intensity to increase from 24% in 2025 to 26% in 2028, and ASML to gain share.

We materially increase our ASML topline forecasts following the unprecedented AI-driven expansion in both advanced logic and DRAM capacity. **We raise EUV (including HNA) shipment forecasts in 2027 to 91 systems (vs. old 86) and 113 (old 87) in 2028, and expect ASML to expand EUV capacity.** This is on top of strong ASP expansion supported by throughput improvements. As a result, we now expect EUV revenue to grow at a 30% CAGR, reaching €42.7bn by 2030, more than 30% above street. We also revised our DUV estimates upward, particularly toward the end of the decade, and now expect DUV revenue to reach €20bn in 2030, from €13bn in 2026.

Top Pick, lifting PT on capex cycle and litho intensity. Higher revenue and operating leverage also support stronger profitability, and our 2028 EPS of €67 is 35% above consensus. We also don't see capex peaking, and expect ASML revenue to reach €80bn by 2030 (20% CAGR) and EPS €97 by 2030 (31% CAGR). ASML now trades at trough valuation vs. peers. Given the clear acceleration in capex cycle and rising peer valuation, **we raise our target P/E multiple from 35x to 40x (1SD above mean), increasing our target price to €2,300.**

INVESTMENT IMPLICATIONS

We rate ASML Outperform, PT = €2,300, TSMC Outperform, PT = USD 430, Intel Outperform, PT = USD 100, Samsung Outperform, PT = KRW 440,000, SK Hynix Outperform, PT = KR 3,300,000, Micron Outperform, PT = USD 1,300.

DETAILS

Our ASML Model and Industry models can be downloaded here ([ASML.NA / ASML Holding NV](#); [EUV Model](#); [DUV Model](#)).

One of the concerns from investors for our ASML long thesis is the delay of High-NA (HNA) adoption, notably by TSMC ([ASML - High-NA EUV adoption postponed?](#)). Investors often ask why is HNA not been adopted, and if TSMC doesn't want to adopt it, does it mean the slowdown of litho vs. other processes such as etch and depo. **This report analyzes the HNA cost vs. Low-NA (LNA) EUV, and conclude that HNA will likely be adopted by memory first, followed by logic, which drives increase in litho intensity. We reiterate ASML long and lift PT to €2300.**

HNA EUV greatly simplifies the process and is set to replace LNA EUV as the leading edge litho tool.

- **HNA EUV has demonstrated ~8 nm resolution versus ~13 nm for LNA EUV, driven by the move from 0.33 numerical aperture to 0.55 NA optics.** In lithography, resolution scales roughly with wavelength divided by numerical aperture, so keeping EUV wavelength constant at 13.5 nm while increasing NA by ~67% allows ASML to print significantly smaller features.
- **That resolution shrink translates into roughly 2.8–2.9x higher theoretical patterning density.** The simple intuition is area scaling: if the printable half-pitch improves from ~13 nm to ~8 nm, the density gain is approximately 2.8x, or about 1.7x smaller features, versus 0.33 NA EUV. The key change is the larger projection-optics aperture, from NA 0.33 to NA 0.55. A higher NA collects and projects light at wider angles, which improves image sharpness and contrast at smaller pitches. ASML also highlights that HNA delivers higher imaging contrast, which improves local CD uniformity, reduces variability, and can lower required exposure dose ([Exhibit 1](#)).
- **The benefit is not only smaller lines, but simpler patterning.** At very tight pitches, LNA EUV increasingly needs double or triple patterning: multiple masks, multiple litho-etch loops, and extra cut/via steps. HNA can convert some of those critical layers back to single exposure, reducing mask count, process complexity, edge-placement error accumulation, cycle time, and defect opportunities.

Cost of HNA exposure is high now but is expected to come down significantly as availability improves. We estimate with 95% availability cost for HNA exposure can drop by 23%.

- **Current low tool availability:** At the current stage, HNA tools suffer from lower availability, which is a common issue for a new litho tool. While HNA is already progressing through the expected maturity curve, running at ~80% availability in 2025, this is still meaningfully below LNA which reached close to 95% availability. ASML started HNA development already in 2014, reached first good exposed wafers in the HNA lab after system integration in 2023. By Sep-2025, EXE systems had exposed more than 500k wafers, providing a much larger data set to drive reliability learning and HVM readiness.
- **Improving availability in sight:** ASML disclosed that HNA availability reached above 80% for the first time in 2025, with fleet availability maturing toward a 90% target in 2026. The main source of lower availability remains long unscheduled downs, especially >12-hour events, while scheduled downtime is also partly driven by monitoring, configuration updates and platform learning. ASML's maturity curve shows EXE availability tracking favorably versus LNA/NXE at a comparable stage, targeting ~95% over the next 3-4 years ([Exhibit 2](#)), ([Exhibit 3](#)).
- **Cost-per-exposure drops:** With higher availability, we estimate the litho equipment cost for HNA exposure can drop by 23% from 2025-2030. Higher availability is an important lever, but not the only driver of HNA cost reduction. Cost per exposure also improves with throughput: EXE:5200B has achieved 175 WpH in AA, up from 110 WpH on EXE:5000, with ASML's roadmap moving toward 190+ WpH ([Exhibit 4](#)).

EXHIBIT 1: HNA EUV moves 0.55 NA optics while keeping the same 13.5 nm wavelength, improving demonstrated resolution from ~13 nm to ~8 nm. This higher optical aperture increases image contrast and allows smaller pitches to be printed with fewer patterning steps.

EXHIBIT 3: EXE availability is targeted to reach 90% by 26Q4 and converge with the NXE:3600 mature fleet performance of 95% over five years

Source: Company reports, Bernstein analysis.

EXHIBIT 2: Unscheduled downtime is the primary driver of EXE unavailability and reducing it is the critical path to achieving the 90% availability target.

EXE System Downtime Breakdown

Source: Company reports, Bernstein analysis

EXHIBIT 4: With HNA availability reaching 95%, the equipment cost of a HNA exposure drops by 23%.

Source: Company reports, Bernstein analysis and estimates.

However, HNA exposure cost is not the same for all. HNA EUV throughput (and hence cost) gets impacted from half field stitching, which results in slower throughput & higher cost for larger dies.

- **The main trade-off with HNA EUV is field size.** Standard LNA NXE systems use a 4×/4× reduction ratio, meaning the mask image is reduced by 4× in both x and y on the wafer, preserving the conventional full EUV exposure field. HNA EXE uses an anamorphic 4×/8× optical design: 4× reduction in one direction and 8× in the other. This helps fit the much larger 0.55 NA projection optics and control mask-side angles, but it also halves the exposed field in one dimension. As a result, EXE prints a half field, roughly 16.5 mm in the reduced direction instead of the classic ~33 mm full-field height ([Exhibit 5](#), [Exhibit 6](#)).
- **For products with many small die, such as some DRAM or smaller logic die, this is manageable: the scanner can expose twice as many half-fields using the same mask, with no need to stitch a single large die. For a single large logic die such as GPU dies, however, the chip can exceed one EXE half-field. In that case, stitching will be required.** Stitching means splitting a large die across two EXE half-field exposures (Mask A and Mask B), and designing an overlap/ stitch zone where the two exposures connect. The chip floorplan and routing are then made stitch-aware, so layout features crossing the boundary can be connected while controlling overlay and placement errors ([Exhibit 7](#)).

EXHIBIT 5: The H100/B100 GPU die size is already approaching the physical reticle limit of 33 × 26 mm². With HNA, this limit is reduced to 16.5 × 26 mm². Consequently, large logic dies require stitching.

Source: ASML, Nvidia, Bernstein analysis.

EXHIBIT 6: In HNA, anamorphic optics use 4× demagnification in one axis and 8× in the other, so the 0.55-NA scanner prints only a half-field on the wafer. Larger logic dies must be split across two mask fields.

Source: ASML, Bernstein analysis

EXHIBIT 7: ASML HNA EUV stitching process using AB mask overlap to reconstruct full field logic die beyond reticle limits highlighting precise overlay control across 16.5 millimeter exposure boundaries for advanced chip manufacturing.

Source: ASML, IMEC, Intel, Bernstein analysis

Our simulation shows that the cost for HNA is significantly lower for smaller dies than larger dies due to stitching, especially in the first few years.

- For larger dies, HNA's half-field exposure requires two reticles (AB) and die stitching, which lowers effective throughput versus AA exposures where the same reticle can be reused. ASML's roadmap shows this clearly: The current EXE:5200B runs at **175 WpH in AA** but **135 WpH in AB**, a ~23% reduction.
- This results in a big difference in HNA exposure cost; based on our calculation, the litho equipment cost for each HNA exposure is 2.4x of LNA with 1 mask (AA) and 3.1x of LNA with 2 masks (AB) in 2025.
- The gap between AA and AB is narrowing. Next gen EXE:5200C improves to **190 WpH AA** and **160 WpH AB**, narrowing the gap to ~16%. The roadmap then points to further productivity gains, with EXE:5200D at ≥ 195 WpH AA / ≥ 175 WpH AB and EXE:5400E at ≥ 210 WpH AA / ≥ 180 WpH AB ([Exhibit 8](#)).
- This means the litho equipment cost for HNA reduces overall, and the cost gap between larger dies and smaller dies narrows. By 2030, with the expected availability improvement, we expect the difference narrows to 1.9x for HNA AA and 2.1x for HNA AB, with still a significant gap between HNA AA and AB. ([Exhibit 9](#))
- This means that for smaller dies (most typical example would be DRAM), HNA litho equipment cost of exposure is lower and is easier to justify, compared to larger dies. For larger dies, HNA litho equipment is only lower than complex EUV double patterning or 3x patterning, or over time when HNA cost comes down further. However, the trend of migration to HNA doesn't change.

EXHIBIT 8: AB HNA throughput is expected to remain materially lower than AA over the next decade, driven by the requirement for dual masks and stitching.

Source: Company reports, Bernstein analysis

EXHIBIT 9: Due to the lower throughput of AB HNA, the litho equipment cost per exposure is approximately 3× that of a LNA exposure, while for AA HNA the cost is only about 2.4× that of LNA. We expect these costs to decline by 2030 to around 2.1× and 1.9×, respectively.

Source: Company reports, Bernstein analysis and estimates.

We conclude that it's likely for DRAM to adopt HNA earlier than logic, due to the absence of mask changing.

- Based on the logic and DRAM roadmaps, HNA adoption becomes viable for logic at A14 (2028) and DRAM D1d (2027/28). However, as we mentioned above DRAM die size is smaller in nature and hence doesn't require stitching. Logic, especially high performance GPU/CPU dies, are of reticle size and would require two masks for HNA, which slows down the process ([Exhibit 5](#)).

- Our simulation shows that for DRAM, HNA is almost certainly cheaper than LNA LELE double patterning. The gap widens when considering more complex SALELE with 4 exposures (2x LNA EUV and 2x ArFi), or LNA EUV LELELE (3x LNA EUV). ([Exhibit 10](#))
- However, for large logic die requiring stitching (AB), it is only justifiable over time to replace SALELE with either 2x EUV + 2x ArFi or 3x EUV. In fact, although the litho equipment cost ratio between HNA SE and 2 LNA decreases significantly, by around 50% from 1.6x in 2025 to 1.1x, it will still remain cheaper to use double exposure LNA rather than single exposure HNA over the next five years ([Exhibit 11](#))

The above analysis only considered the cost of litho tool itself. There are other factors to consider. Considering the total cost, we believe HNA will be more cost competitive as availability increases, even for larger logic dies.

- **HNA also drives overall process simplification, non-litho cost cuts, yield improvements, hence should drive higher Litho Intensity.** HNA enables process simplification because its higher resolution and contrast allow critical layers that would otherwise require LNA EUV multi-patterning — e.g., line/cut split flows such as SALELE — to be printed with a single HNA exposure. This reduces the number of masks, litho-etch loops, cut steps and related non-litho processing, while also improving pattern fidelity, local CDU and defectivity ([Exhibit 12](#)).
- **This simplification shifts value from non-litho processing into lithography:** even if the HNA exposure itself is more expensive, the total process flow can become cheaper and more productive. As availability, throughput and ecosystem cost roadmaps improve, HNA should therefore support higher litho intensity, because customers replace complex non-litho-heavy patterning schemes with more lithography-enabled single-expose solutions, including for larger logic dies where stitching solutions are available. ASML estimates a significant increase in litho intensity when transitioning from LELE LNA to single-exposure HNA. Litho CapEx and OpEx are expected to rise by approximately 1.2x, while non-litho costs are projected to decline ([Exhibit 13](#), [Exhibit 14](#)).
- Considering the total cost, we believe HNA will be more cost competitive as availability increases, even for larger logic dies.

EXHIBIT 10: We estimate that, for DRAM, HNA is more cost-effective than LNA LELE double patterning. The advantage becomes more pronounced when considering more complex schemes, such as SALELE with 4 exposures (2x LNA and 2x ArFi), or LNA LELELE (3x LNA).

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 11: However, for logic, we estimate that HNA is economically justified only for replacing SALELE with 2x EUV + 2x ArFi or 3x EUV over time.

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 12: HNA simplifies critical layer patterning by replacing low-NA SALELE line/cut multi-patterning with single exposure, reducing masks, litho-etch loops, process steps and non-litho cost, while materially increasing litho intensity.

Source: IEEE VLSI Symposium 2026, Bernstein Analysis

EXHIBIT 13: HNA EUV reduces process complexity and lithography exposures compared to SALELE, enabling more efficient patterning, lower cost and improved throughput.

Source: IEEE VLSI Symposium 2026, Bernstein Analysis

EXHIBIT 14: ASML estimates a significant increase in litho intensity when transitioning from LELE LNA to single-exposure HNA. Litho CapEx and OpEx are expected to rise by approximately 1.2x, while non-litho costs are projected to decline.

Source: ASML, Bernstein analysis

As a result, DRAM is likely to adopt HNA in 2027 (1d node), slightly ahead of logic (2028-2030).

- **Our best guess of HNA adoption is: Samsung / Hynix DRAM in 2027 (D1d), Intel in 2028 (A14), Samsung logic in 2029 (SF1.4), TSMC in 2030 (A10).** SK hynix has the clearest early signal: the company announced in September 2025 that it had assembled ASML's TWINSCAN EXE:5200B, the first production-oriented HNA system, at its M16 fab for next-generation DRAM development. Samsung is also moving quickly, with [industry reports](#) indicating that it ordered two ASML EXE:5200B tools, with the first expected by late 2025 and the second in H1 2026. There is no official HNA disclosure from

Micron yet, but they could adopt HNA slightly later, consistent with its more conservative EUV LNA strategy in DRAM. In logic, Intel is likely to be the first adopter, having received and assembled the industry's first commercial HNA EUV tool from ASML in 4Q2023 probably for the manufacturing of A14. Samsung logic should follow shortly after, while TSMC appears likely to delay broad HNA insertion until around 10A, after prioritizing R&D first and extending LNA for earlier nodes ([Exhibit 15](#), [Exhibit 16](#), [Exhibit 17](#)).

- TSMC's announcement to adopt HNA slower than Intel and Samsung doesn't change the view that HNA is better. It probably reflects 1. TSMC's prudence and conservativeness to adopt new technologies vs. optimizing existing technologies, and 2. Economically it's better to wait for HNA to further improve in availability and throughput, which results in lower cost per exposure (but at the risk of not benefiting from HNA immediately).

Financially, slower HNA adoption is probably even better for ASML... at least in the near term.

- As shown above, from litho tool perspective, it's economically better to sell more LNA EUV machines than fewer HNA machines. this is especially the case when considering the much higher margin for LNA over HNA EUV.
- On the other hand, HNA adoption will further increase litho intensity and hence ASML's market share in WFE, as more value goes from non-litho steps (etch, depo, cleaning, etc) to litho when 1 HNA replaces multiple LNA/ArFi steps.

EXHIBIT 15: DRAM players could begin to adopt HNA at the 1d node around 2027 to 2028, when feature size F is expected to decline to around 10nm or below.

Source: TEL, ASM International, Bernstein analysis

EXHIBIT 16: **We estimate that logic will adopt HNA at around A14, likely in the 2028 to 2030 timeframe, when metal pitch is expected to decline to approximately 21nm.**

Source: Company reports, Imec, Bernstein analysis and estimates

EXHIBIT 17: **DRAM HNA adoption likely starts with SK hynix and Samsung at 1d. Logic insertion should begin with Intel A14, then Samsung SF1.4, before TSMC eventually adopts HNA around 10A at the end of the decade**

Source: Company reports, Bernstein analysis and estimates

We expect litho intensity to increase in DRAM, and remains elevated in logic. Overall litho intensity is going up from 24% to 26%.

- We estimate litho intensity increased from around 20% in 1Y and 1Z to 28% in 1c. This significant growth was driven by the rising number of EUV exposures, starting with 3 to 4 exposures in 1a, increasing to 4 to 6 in 1b, and then to 6 to 7 in 1c. With 1c penetration expected to increase substantially over the next few years, we expect total DRAM litho intensity to grow

considerably. Additionally, with the introduction of double patterning EUV or HNA at the 1d node, we expect litho intensity to rise further to around 30% ([Exhibit 18](#)).

- Similarly, logic litho intensity increased significantly from around 20% at 10nm, driven by a sharp rise in EUV exposures, peaking at 5nm and 3nm at above 35% intensity. While logic litho intensity declined from 3nm to 2nm due to the adoption of GAA, which requires more non litho steps, it remains elevated at around 32%. We expect it to stay at similar levels or higher with HNA at 1.4nm, and to increase further at the 1nm node ([Exhibit 19](#)).
- Blended litho intensity for ASML is increasing and is expected to continue its upward trend, driven by the faster growth of DRAM and advanced logic relative to the overall semiconductor market. Both segments carry considerably higher litho intensity compared to mature logic and NAND, supporting a structurally higher blended litho intensity over time ([Exhibit 20](#)).

EXHIBIT 18: We anticipate an increase in lithography intensity in DRAM. The introduction of double-patterning EUV (or HNA) at the 1d node is expected to drive lithography intensity up to ~30%

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 19: Logic litho intensity declined from 3nm to 2nm but remains elevated at ~32%. We expect it to stay at similar levels or increase further with HNA at 1.4nm, and likely rise again at the 1nm node.

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 20: We expect litho intensity to continue its upward trend, driven by the increasing penetration of 1c and 1d nodes in DRAM, which command higher litho intensity, as well as advanced logic, which has considerably higher litho intensity compared to mature logic.

Source: Company reports, Bernstein analysis and estimates

MODEL UPDATES

Following the unprecedented AI-driven demand, which has led to a massive expansion in capacity for AI accelerators and DRAM memory, we now expect ASML's demand for LNA EUV to be significantly higher than previously anticipated and have raised our PT accordingly.

- To reflect the very strong positive developments in DRAM capacity expansion, highlighted by [Micron announcing almost doubling of capex next year](#), alongside [Samsung and Hynix each outlining large-scale domestic investment plans of approximately \\$1.3tn](#), we have revised our DRAM capacity estimates using EUV. We now expect the strong growth observed over the past two years to persist, with capacity nearly tripling over the next five years.
- Similarly, we have significantly revised upward our advanced logic estimates. Specifically regarding TSMC's capacity outlook, we expect substantial growth driven by sustained demand for AI accelerators, which shows no signs of slowing. TSMC's capacity is projected to accelerate meaningfully toward the end of the decade. The 2nm and A14 nodes are expected to experience the strongest growth.

For these reasons, **we have considerably revised upward our EUV unit shipment estimates from 2027 onwards, with the largest increase occurring toward the end of the decade.** We have raised our 2027 estimate to 91 units (vs. old 86), as ASML indicated that its capacity should reach the low nineties. To support the strong demand, we believe shipments in the 2028 to 2030 period will need to be significantly higher, requiring ASML to expand capacity substantially and exceed 100 units, reaching 125 units in 2030 ([Exhibit 21](#)).

Additionally, we anticipate EUV blended ASP to continue expanding over the next five years, driven by: (1) strong improvements in LNA throughput, which is expected to exceed 300 WPH by 2030 at ASML and has historically shown a strong correlation with ASP; and (2) the growing penetration of HNA toward the end of the decade, which carries roughly double the ASP. This translates into a significant increase in our EUV revenue over the next five years, with a CAGR of 30%, reaching €42.7bn by 2030. We are well above consensus throughout the forecast period and estimate revenue that is more than 30% above street by 2030 ([Exhibit 22](#), [Exhibit 23](#)).

EXHIBIT 21: We have significantly revised our projections upward for DRAM and advanced logic capacity expansion over the 2027-30E period. As a result, expected EUV shipments have risen substantially, approaching around 125 units by 2030.

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 22: We expect EUV blended ASP to continue increasing over the next five years, supported by its historically strong correlation with throughput improvements and the growing penetration of HNA toward the end of the decade

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 23: We are well above consensus on EUV over the next five years, driven by growth in advanced logic and especially DRAM capacity. We estimate EUV revenue will grow at 30% CAGR 25-30E reaching above EUR 42bn.

Source: Company reports, Bernstein analysis and estimates.

The massive increase in semiconductor demand driven by the expansion of AI infrastructure will also fuel significant growth in DUV, which remains the industry's primary workhorse and continues to grow alongside EUV. ArF immersion systems, in particular, are still used extensively for less critical layers across DRAM, NAND, and Logic. As a result, we have revised our DUV revenue estimates upward, especially toward the end of the decade, and now expect DUV revenue to reach approximately €20bn by 2030. We continue to be materially above consensus on DUV over the next five years ([Exhibit 24](#),

[Exhibit 25](#)).

Looking at overall revenue, **we expect ASML to deliver a 20% CAGR over the next five years, significantly above both consensus and the high end of management guidance, reaching €80bn by 2030.** We are now 24% above street expectations in 2030, which stand at €64bn. We are also above consensus on margins, primarily driven by substantially higher revenue and the resulting operating leverage. As a result, we are 50% above consensus on EPS in 2030 ([Exhibit 26](#)).

The combination of strong revenue growth and margin expansion translates into EPS growth of 31% CAGR over the next five years, reaching almost €97 by 2030. This is significantly above street expectations, which imply EPS growth of only 21% over the same period ([Exhibit 27](#)).

This translates into our FY25-28 EPS estimate being revised upward to €56.7, an increase of 15% vs. our previous estimate of €49.2. We also raise our target P/E multiple from 35x to 40x, implying a target price of €2,300. Notably, ASML is trading below parity with the SPE median for the first time, compared with its historical valuation premium of 1.7x relative to the WFE sector. We strongly believe ASML deserves to trade at a premium to other WFE players, given its monopolistic position and the expected increase in lithography intensity over time ([Exhibit 28](#), [Exhibit 29](#), [Exhibit 30](#), [Exhibit 31](#)).

EXHIBIT 24: To reflect the significant increase in semiconductor demand driven by AI, we have revised our DUV estimates upward and now expect DUV revenue to reach EUR 20bn by 2030.

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 25: We are significantly above consensus on DUV as well over the next 5 years.

Source: Company reports, Bernstein analysis and estimates

EXHIBIT 26: **We are considerably above consensus on system sales across both EUV and Non-EUV, as well as on Installed Base Management over the next 5 years.**

There is a notable gap between the sum of the three segment consensus estimates and the total revenue estimate.
Source: Bloomberg, Bernstein analysis and estimates.

EXHIBIT 27: **We've revised up our estimates, now forecasting revenue of EUR 80bn by 2030, 24% above consensus, driven by higher EUV and DUV. We are above consensus on margins and 50% above consensus on EPS in 2030.**

DISCLOSURE APPENDIX

I. REQUIRED DISCLOSURES

References to "Bernstein" or the "Firm" in these disclosures relate to the following entities: Bernstein Institutional Services LLC (April 1, 2024 onwards), Sanford C. Bernstein & Co., LLC (pre April 1, 2024), Bernstein Autonomous LLP, BSG France S.A. (April 1, 2024 onwards), Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司, Sanford C. Bernstein (Canada) Limited, Sanford C. Bernstein (India) Private Limited (SEBI registration no. INH000006378), Sanford C. Bernstein (Singapore) Private Limited, Sanford C. Bernstein Japan KK (サンフォード・C・バーンスタイン株式会社) and analysts employed by Société Générale Africa Technologies & Services to produce Bernstein research under a Global Services Agreement in place between Bernstein and Société Générale.

Bernstein is part of a joint venture between Société Générale (SG) and AllianceBernstein, L.P. (AB). Unless specifically noted otherwise, for purposes of these disclosures, references to Bernstein's "affiliates" relate to both SG and AB and their respective affiliates.

VALUATION METHODOLOGY**ASML Holding NV**

For ASML, we apply a 40x P/E multiple to our Q5-8 EPS estimate to get a rounded PT of €2,300. For the ASML US listing we apply the EUR/US\$ exchange rate to get to a rounded PT of USD 2,623.

Intel Corp

For INTC, we assign a ~8x EV multiple to the average of our FY27/FY28 sales estimate (~\$66.1B) to arrive at a price target of \$100.

Samsung Electronics Co Ltd

We value Samsung Electronics with 1.6x of 2-year forward BVPS and arrive at price target of KRW 225,000 for its common shares, KRW191,250 for preferred shares, and US\$3,888 for US ADR.

SK Hynix Inc

We value SK hynix with 1.5x of 2-year forward BVPS and arrive at price target of KRW1,150,000.

Micron Technology Inc

We value Micron with 7.7x of forward 5Q-8Q EPS of US\$169.8 and arrive at price target of US\$1,300.

Taiwan Semiconductor Manufacturing Co Ltd

We set a NT\$2,780 1-year target price using a P/E multiple of 20x against our forward Q5-Q8 EPS estimate of NT\$139. We derive our PT for secondary ticker (TSM.US) by dividing the primary PT by FX and arrive at US\$430.

RISKS**ASML Holding NV**

Downside risks to our price target for ASML include margins coming below expectation because of the higher cost to commercialise EUV and advance EUV to new generations, larger than expected China over-stocking, weaker than expected WFE market, slower technology migration and the threat from other technologies in the long run, and further tightened export control on China customers.

Intel Corp

Upside risk to our price target on INTC includes greater than expected PC or datacenter growth, microprocessor ASP strength, substantial success in adjacent businesses, further share gains, or possible strategic / structural moves. Downside risks include macro headwinds, further roadmap slippages, larger margin headwinds, or greater share losses.

Samsung Electronics Co Ltd

The biggest downside risk to our target price is an earlier end of favorable pricing environment, which can be a result of weaker demand or higher supply. Investor sentiment and hence the valuation rewarded by investors is also a risk. China's progress in memory, especially in NAND, is a downside risk too.

SK Hynix Inc

The biggest downside risk to our target price is an earlier end of favorable pricing environment, which can be a result of weaker demand or higher supply. Investor sentiment and hence the valuation rewarded by investors is also a risk. China's progress in memory, especially in NAND, is a downside risk too.

Micron Technology Inc

The biggest downside risk to our target price is an earlier end of favorable pricing environment, which can be a result of weaker demand or higher supply. Investor sentiment and hence the valuation rewarded by investors is also a risk. China's progress in memory, especially in NAND, is a downside risk too.

Taiwan Semiconductor Manufacturing Co Ltd

Downside risks are: (1) Market-wide multiple contraction. (2) Intel regains and keeps technology superiority. (3) Geopolitical uncertainties

RATINGS DEFINITIONS, BENCHMARKS AND DISTRIBUTION

EQUITY RATINGS DEFINITIONS

Bernstein brand

The Bernstein brand rates stocks based on forecasts of relative performance for the next 12 months versus the S&P 500 for stocks listed on the U.S. and Canadian exchanges, versus the Bloomberg Europe Developed Markets Large and Mid Cap Price Return Index EUR (EDME) for stocks listed on the European exchanges and emerging markets exchanges outside of the Asia Pacific region, versus the Bloomberg Japan Large and Mid Cap Price Return Index USD (JPL) for stocks listed on the Japanese exchanges, and versus the Bloomberg Asia ex-Japan Large and Mid Cap Price Return Index (ASIAX) for stocks listed on the Asian (ex-Japan) exchanges -unless otherwise specified.

The Bernstein brand has three categories of ratings:

- Outperform: Stock will outpace the market index by more than 15 pp
- Market-Perform: Stock will perform in line with the market index to within +/- 15 pp
- Underperform: Stock will trail the performance of the market index by more than 15 pp

Coverage Suspended: Coverage of a company under the Bernstein research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Not Covered (NC) denotes companies that are not under coverage.

Bernstein brand stock ratings are based on a 12-month time horizon.

Autonomous brand – common stocks

The Autonomous brand rates common stocks as indicated below. As our benchmarks we use the Bloomberg Europe 500 Banks And Financial Services Index (BEBANKS) and Bloomberg Europe Dev Mkt Financials Large and Mid Cap Price Ret Index EUR (EDMFI) index for developed European banks and Payments, the Bloomberg Europe 500 Insurance Index (BEINSUR) for European insurers, the S&P 500 and S&P Financials for US banks and Payments coverage, S5LIFE for US Insurance, the S&P Insurance Select Industry (SPSIINS) for US Non-Life Insurers coverage, and the Bloomberg Emerging Markets Financials Large, Mid and

Small Cap Price Return Index (EMLSF) for emerging market banks and insurers and Payments. Ratings are stated relative to the sector (not the market).

The Autonomous brand has three categories of common stock ratings:

- Outperform (OP): Stock will outpace the relevant index by more than 10 pp
- Neutral (N): Stock will perform in line with the market index to within +/- 10 pp
- Underperform (UP): Stock will trail the performance of the relevant index by more than 10 pp

Coverage Suspended: Coverage of a company under the Autonomous research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Those denoted as 'Feature' (e.g., Feature Outperform FOP, Feature Under Outperform FUP) are our core ideas.

Not Covered (NC) denotes companies that are not under coverage.

Autonomous brand common stock ratings are based on a 12-month time horizon.

Autonomous brand – preferred stocks

The Autonomous brand has three categories of preferred stock ratings:

- Outperform (OP): The total return of the preferred instrument is expected to outperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Neutral (N): The total return of the preferred instrument is expected to perform in line with preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Underperform (UP): The total return of the preferred instrument is expected to underperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous preferred stock ratings are based on a 6-month time horizon.

AUTONOMOUS CREDIT RESEARCH

Where this report contains investment recommendations for credit instruments, as defined in article 3(1)(35) of the Market Abuse Regulation, the information below is presented to comply with its disclosure requirements.

The report may also include reference(s) to published opinions by other Autonomous or Bernstein analysts covering the equity securities of the issuer(s) referenced herein. Please note an investment recommendation for credit instruments published by the author(s) of this report may differ from the published view of the analyst covering equity securities for the issuer(s) contained in this report and vice versa.

CREDIT RATINGS DEFINITIONS

The Autonomous brand has three categories of credit ratings:

- Credit Outperform (C-OP): The total return of the Reference Credit Instrument is expected to outperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.
- Credit Neutral (C-N): The total return of the Reference Credit Instrument is expected to perform in line with the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.
- Credit Underperform (C-UP): The total return of the Reference Credit Instrument is expected to underperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous credit ratings are based on a 6-month time horizon.

A list of all investment recommendations produced by the author(s) of this report alongside credit ratings history are available upon request.

It is at the sole discretion of the Firm as to when to initiate, update and cease research coverage. The Firm has established, maintains and relies on information barriers to control the flow of information contained in one or more areas (i.e. the private side) within the Firm, and into other areas, units, groups or affiliates (i.e. public side) of the Firm

DISTRIBUTION OF EQUITY RATINGS/INVESTMENT BANKING SERVICES

Equity Rating	Market Abuse Regulation (MAR) and FINRA Rating Category	Global Rating Distribution	Investment Banking Relationships*
Outperform	BUY	51.2%	15.3%
Market-Perform (Bernstein Brand) Neutral (Autonomous Brand)	HOLD	35.8%	16.2%
Underperform	SELL	13.1%	13.6%

* These figures represent the percentage of companies within each equity rating category for which affiliates of Bernstein have provided investment banking services within the previous 12 months.
As of June 30, 2026. All figures are updated quarterly.

Where this report has been prepared by research analyst(s) employed by a non-US affiliate, such analyst(s), is/are (unless otherwise expressly noted below) not registered as associated persons of Bernstein Institutional Services LLC or any other SEC-registered broker-dealer and are not licensed or qualified as research analysts with FINRA. Accordingly, such analyst(s) may not be subject to FINRA's restrictions regarding (among other things) communications by research analysts with a subject company, interactions between research analysts and investment banking personnel, participation by research analysts in solicitation and marketing activities relating to investment banking transactions, public appearances by research analysts, and trading securities held by a research analyst account.

Where this report has been prepared by research analyst(s) employed by Société Générale Africa Technologies & Services (part of the Société Générale group of companies), it has been prepared on behalf of a Bernstein company under a Global Services Agreement in place between Bernstein and Société Générale.

CERTIFICATION

Each research analyst listed in this report, who is primarily responsible for the preparation of the content of this report, certifies that all of the views expressed in this publication accurately reflect that analyst's personal views about any and all of the subject securities or issuers and that no part of that analyst's compensation was, is, or will be, directly or indirectly, related to the specific

recommendations or views in this publication.

II. ADDITIONAL GLOBAL CONFLICT DISCLOSURES

It is at the sole discretion of the Firm as to when to initiate, update and cease research coverage. The Firm has established, maintains and relies on information barriers to control the flow of information contained in one or more areas (i.e., the private side) within the Firm, and into other areas, units, groups or affiliates (i.e., public side) of the Firm.

III. OTHER IMPORTANT INFORMATION AND DISCLOSURES

Separate branding is maintained for “Bernstein” and “Autonomous” research products.

- Bernstein produces a number of different types of research products including, among others, fundamental analysis and quantitative analysis under both the “Autonomous” and “Bernstein” brands. Recommendations contained within one type of research product may differ from recommendations contained within other types of research products, whether as a result of differing time horizons, methodologies or otherwise. Furthermore, views or recommendations within a research product issued under one brand may differ from views or recommendations under the same type of research product issued under the other brand. The Research Ratings System for the two brands and other information related to those Rating Systems are included in the previous section.
- Autonomous operates as a separate business unit within the following entities: Bernstein Institutional Services LLC, Bernstein Autonomous LLP, Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司 and Sanford C. Bernstein (India) Private Limited. For information relating to “Autonomous” branded products (including certain Sales materials) please visit: www.autonomous.com. For information relating to Bernstein branded products please visit: www.bernsteinresearch.com.

Analysts are compensated based on aggregate contributions to the research franchise as measured by account penetration, productivity and proactivity of investment ideas. No analysts are compensated based on performance in, or contributions to, generating investment banking revenues.

This report has been produced by an independent analyst as defined in Article 3 (1)(34)(i) of EU 596/2014 Market Abuse Regulation (“MAR”) and the same article of MAR as it forms part of United Kingdom domestic law by virtue of the European Union (Withdrawal) Act 2018.

To our readers in the United States: Bernstein Institutional Services LLC, a broker-dealer registered with the U.S. Securities and Exchange Commission (“SEC”) and a member of the U.S. Financial Industry Regulatory Authority, Inc. (“FINRA”) is distributing this publication in the United States and accepts responsibility for its contents. Where this material contains an analysis of debt product(s), such material is intended only for institutional investors and is not subject to the US independence and disclosure standards applicable to debt research prepared for retail investors.

Bernstein Institutional Services LLC may act as principal for its own account or as agent for another person (including an affiliate) in sales or purchases of any security which is a subject of this report. This report does not purport to meet the objectives or needs of any specific individuals, entities or accounts.

To our readers in Canada: If this publication pertains to a Canadian domiciled company, it is being distributed in Canada by Sanford C. Bernstein (Canada) Limited, which is licensed and regulated by the Canadian Investment Regulatory Organization. If the publication pertains to a non-Canadian domiciled company, it is being distributed by Bernstein Institutional Services LLC, which is licensed and regulated by both the SEC and FINRA, into Canada under the International Dealers Exemption.

This document may not be passed onto any person in Canada unless that person qualifies as “permitted client” as defined in Section 1.1 of NI 31-103.

To our readers in Brazil: This report has been prepared by Bernstein Institutional Services LLC, and Banco BTG Pactual S.A. (“BTG”) is responsible for the distribution of this report in Brazil.

To readers in the United Kingdom: This publication has been issued or approved for issue in the United Kingdom by Bernstein Autonomous LLP, authorised and regulated by the Financial Conduct Authority and located at 60 London Wall, London EC2M 5SH, +44 (0)20-7170-5000. Registered in England & Wales No OC343985.

This document is for distribution only to persons who (i) have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (as amended, the “Financial Promotion Order”), (ii) are persons falling within Article 49(2)(a) to (d) (“high net worth companies, unincorporated associations, etc.”) of the Financial Promotion Order, (iii) are outside the United Kingdom, or (iv) are persons to whom an invitation or inducement

to engage in investment activity (within the meaning of section 21 of the FSMA) in connection with the issue or sale of any securities may otherwise lawfully be communicated or caused to be communicated (all such persons together being referred to as “relevant persons”). This document is directed only at relevant persons and must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is available only to relevant persons and will be engaged in only with relevant persons.

To our readers in the member states of the EEA: This publication is being distributed by BSG France SA, which is authorised and regulated by the Autorité de Contrôle Prudentiel et de Résolution (ACPR) and Autorité des Marchés Financiers (AMF).

To our readers in Hong Kong: This publication is being distributed in Hong Kong by Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司, which is licensed and regulated by the Hong Kong Securities and Futures Commission (Central Entity No. AXC846) to carry out Type 4 (Advising on Securities) regulated activities and subject to the licensing conditions mentioned in the SFC Public Register (<https://www.sfc.hk/publicregWeb/corp/AXC846/details>). This publication is solely for professional investors, as defined in the Securities and Futures Ordinance (Cap. 571). The purpose of this report is solely to provide an analysis of the issuers referred to in this report and is not intended for any purpose contrary to the laws of Hong Kong.

To our readers in Singapore: This publication is being distributed in Singapore by Sanford C. Bernstein (Singapore) Private Limited, only to accredited investors or institutional investors, as defined in the Securities and Futures Act 2001 of Singapore (“SFA”). Recipients in Singapore should contact Sanford C. Bernstein (Singapore) Private Limited in respect of matters arising from, or in connection with, this publication. Sanford C. Bernstein (Singapore) Private Limited is regulated by the Monetary Authority of Singapore and licensed under the SFA as a capital markets services licence holder for dealing in capital markets products that are securities and collective investment schemes and an exempt financial adviser for advising on, issuing and promulgating analyses and reports on securities. Sanford C. Bernstein (Singapore) Private Limited is registered in Singapore with Company Registration No. 20213710W and located at 8 Marina Boulevard, #12-01, Marina Bay Financial Centre, Singapore 018981, +65-6326-7000.

To our readers in the People’s Republic of China: The securities referred to in this document are not being offered or sold and may not be offered or sold, directly or indirectly, in the People’s Republic of China (for such purposes, not including the Hong Kong and Macau Special Administrative Regions or Taiwan, the “PRC”) in contravention of any applicable laws of the PRC.

This document does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC to any person to whom it is unlawful to make the offer or solicitation in the PRC.

We do not represent that this document may be lawfully distributed, or that any securities may be lawfully offered, in compliance with any applicable registration or other requirements in the PRC, or pursuant to an exemption available thereunder, or assume any responsibility for facilitating any such distribution or offering. In particular, no action has been taken by us which would permit a public offering of any securities or distribution of this document in the PRC. Accordingly, the securities are not being offered or sold within the PRC by means of this document or any other document. Neither this document nor any advertisement or other offering material may be distributed or published in the PRC, except under circumstances that will result in compliance with any applicable laws and regulations.

To our readers in Japan: This publication is being distributed in Japan by Sanford C. Bernstein Japan KK (サンフォード・C・バーンスタイン株式会社), which is registered in Japan as a Financial Instruments Business Operator with the Kanto Local Finance Bureau (registration number: The Director-General of Kanto Local Finance Bureau (FIBO) No.3387) and regulated by the Financial Services Agency. It is also a member of Investment Management Association of Japan. This publication is solely for qualified institutional investors in Japan only, as defined in Article 2, paragraph (3), items (i) of the Financial Instruments and Exchange Act.

For the institutional client readers in Japan who have been granted access to the Bernstein website by Daiwa Securities Group Inc. (“Daiwa”), your access to this document should not be construed as meaning that Bernstein is providing you with investment advice for any purposes. Whilst Bernstein has prepared this document, your relationship is, and will remain with, Daiwa, and Bernstein has neither any contractual relationship with you nor any obligations towards you.

To our readers in Australia: Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司 is responsible for distributing research in Australia. It is regulated by the Securities and Exchange Commission under U.S. laws, by the Financial Conduct Authority under U.K. laws, which differs from Australian laws. Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司 is exempt from the requirement to hold an Australian financial services license under the Corporations Act 2001 in respect of the provision of the following financial services to wholesale clients:

- providing financial product advice;
- dealing in a financial product;

- making a market for a financial product; and
- providing a custodial or depository service.

To our readers in India: This publication is being distributed in India by Sanford C. Bernstein (India) Private Limited (SCB India) which is licensed and regulated by Securities and Exchange Board of India ("SEBI") as a research analyst entity under the SEBI (Research Analyst) Regulations, 2014, having registration no. INH000006378 and as a stock broker having registration no. INZ000213537. SCB India is currently engaged in the business of providing research and stock broking services. LEGAL

All research publications are disseminated to our clients through posting on the firm's password protected websites, bernsteinresearch.com and autonomous.com. Certain, but not all, research publications are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience.

This publication has been published and distributed in accordance with the Firm's policy for management of conflicts of interest in investment research, a copy of which is available from Bernstein Institutional Services LLC, Director of Compliance, 245 Park Avenue, New York, NY 10167. Additional disclosures and information regarding Bernstein's business are available on our website www.bernsteinresearch.com.

The securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investors where that permission profile is not consistent with the licenses held by the entities noted herein. This document is for distribution only as may be permitted by law. This publication is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of, or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject any of the entities referenced herein or any of their subsidiaries or affiliates to any registration or licensing requirement within such jurisdiction. This publication is based upon public sources we believe to be reliable, but no representation is made by us that the publication is accurate or complete. We do not undertake to advise you of any change in the reported information or in the opinions herein. This publication was prepared and issued by entity referred to herein for distribution to eligible counterparties or professional clients. This publication is not an offer to buy or sell any security, and it does not constitute investment, legal or tax advice. The investments referred to herein may not be suitable for you. Investors must make their own investment decisions in consultation with their professional advisors in light of their specific circumstances. The value of investments may fluctuate, and investments that are denominated in foreign currencies may fluctuate in value as a result of exposure to exchange rate movements. Information about past performance of an investment is not necessarily a guide to, indicator of, or assurance of, future performance.

This report is directed to and intended only for our clients who are "eligible counterparties", "professional clients", "institutional investors" and/or "professional investors" as defined by the aforementioned regulators, and must not be redistributed to retail clients as defined by the aforementioned regulators. Retail clients who receive this report should note that the services of the entities noted herein are not available to them and should not rely on the material herein to make an investment decision. The result of such act will not hold the entities noted herein liable for any loss thus incurred as the entities noted herein are not registered/ authorised/ licensed to deal with retail clients and will not enter into any contractual agreement/arrangement with retail clients. This report is provided subject to the terms and conditions of any agreement that the clients may have entered into with the entities noted herein. All research reports are disseminated on a simultaneous basis to eligible clients through electronic publication to our client portal.

The information in this report was prepared by Bernstein solely for the internal business use of our clients. Clients may store, display, analyze, reformat and print the information in this report for this limited use only. Clients may not copy, alter, create derivative works, resell, reverse engineer, commercially exploit, share or distribute any part of the information contained herein for any purpose without Bernstein's express written consent. These restrictions include extracting data or using the content to develop indices or other products. Further, you may not use this report, or any portion of this report, to train or finetune any third-party machine learning or artificial intelligence system, or as a prompt or input into any such system. You also may not, without Bernstein's express written consent, do any of the foregoing in connection with your own internal machine learning or artificial intelligence system.

Bernstein may use artificial intelligence tools in the preparation of its materials. Any such materials are reviewed by Bernstein's research analysts prior to publication.

This report has been prepared for information purposes only and is based on current public information that we consider reliable, but the entities noted herein do not warrant or represent (express or implied) as to the sources of information or data contained herein are accurate, complete, not misleading or as to its fitness for the purpose intended even though the entities noted herein rely on reputable or trustworthy data providers, it should not be relied upon as such. Opinions expressed are the author(s)' current opinions as of the date appearing on the material only and we do not undertake to advise you of any change in the reported information or in the opinions herein.

Any references to Societe Generale herein are purely factual, based upon publicly available information, and included for comparative purposes only. They do not constitute an opinion or recommendation with respect to the securities of Societe Generale.

This publication was prepared and issued by the entity referred to herein for distribution to eligible counterparties or professional clients. The information in this report is intended for general circulation and does not constitute an offer to buy or sell any security, investment, legal or tax advice nor a personal recommendation, as defined by any of the aforementioned regulators. It does not take into account the particular investment objectives, financial situations, or needs of individual investors. The report has not been reviewed by any of the aforementioned regulators and does not represent any official recommendation from the aforementioned regulators. The investments referred to herein may not be suitable for you. Investors must make their own investment decisions in consultation with advice sought from a financial adviser regarding the suitability of the investment product, taking into account the specific investment objectives, financial situation or particular needs of any recipient of the recommendation, before the recipient makes a commitment to purchase the investment product.

The analysis contained herein is based on numerous assumptions. Different assumptions could result in materially different results. The information in this report does not constitute, or form part of, any offer to sell or issue, or any offer to purchase or subscribe for shares, or to induce engagement in any other investment activity. The value of any securities or financial instruments mentioned in this report may fluctuate subject to market conditions. Information about past performance of an investment is not necessarily a guide to, indicative of, or assurance of future performance. Estimates of future performance mentioned by the research analyst in this report are based on assumptions that may not be realized due to unforeseen factors like market volatility/fluctuation. In relation to securities or financial instruments denominated in a foreign currency other than the clients' home currency, movements in exchange rates will have an effect on the value, either favorable or unfavorable. Before acting on any recommendations in this report, recipients should consider the appropriateness of investing in the subject securities or financial instruments mentioned in this report and, if necessary, seek independent professional advice.

The securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investors where that permission profile is not consistent with the licenses held by the entities noted herein. This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject the entities noted herein to any regulation or licensing requirement within such jurisdiction.
