- ◆ New ODI regulations clarify compliant overseas expansion while reinforcing national security guardrails
- ◆ Industrial profits accelerated, with improvements concentrated in upstream petrol-chemical and AI-related industries

Urban renewal and permanent residence-based welfare coverage to lift demand

China is emphasising structural reforms to boost consumption and investment. Shortly after recent plans to increase social safety net coverage based on one's permanent residence as opposed to household registration (we wrote more extensively on this in [China's Urbanisation 2.0](#), 29 May 2026), the State Council also provided its 5-year road map for urban renewal on 28 May. These two policies go hand in hand and will be conducive to lifting both consumption and investment in the medium and longer-term.

Considering that the property sector's recent revival is concentrated primarily in the largest cities (e.g. tier-1, see charts 8 and 10), this broader focus on expanding urban infrastructure and high-quality housing development across a multitude of regions and city clusters should be helpful in stabilising the overall property sector as well.

In the plan, the NDRC estimates that urban renewal during the 15th FYP (Five Year Plan) period could mobilise at least RMB15trn of investment, including around RMB5trn from underground pipeline network upgrades alone (NDRC, 7 April). Beyond investment, urban renewal is expected to reinforce broader policy priorities such as boosting consumption and "investing in people". The plan calls for upgrading consumption-related infrastructure, revitalising idle housing stock and underutilised land, and prioritising the closing of public service gaps, particularly in elderly care and childcare.

On funding, the plan highlights a multi-channel approach, including central budget investment, local government special bonds (eligible projects may use proceeds as equity capital), new policy financial instruments and market-based financing, while explicitly prohibiting the creation of new implicit local government debt.

Local government special bonds for urban renewal are expected to increase during the 15th FYP period. In Q1 2026, issuance of urban renewal-related special-purpose bonds reached RMB120bn, up 7% y-o-y (Xinhua, 16 April). Recent policies have also reiterated support for affordable housing; however even though special bonds have been permitted for land reserves and for purchasing commercial housing used for affordable housing, progress has been limited so far. Ultimately, the scale-up of social housing supply will hinge on stronger direct central funding and coordination.

Trade and ODI: Lowering of some US-China tariffs; China's ODI regulations clarified

Implementation of the deals from the May China-US presidential summit is now underway. The US plans to launch a public consultation covering at least USD30bn of non-strategic Chinese goods to identify items that could qualify for tariff reductions or removals (Reuters, 26 May). We expect the public comment notice to give further guidance around goods under consideration, which are likely to be in labour-intensive consumer goods. While the timing remains uncertain, the implementation of tariff reductions could be as soon as a few months, assuming a relatively short comment period (e.g. 30 days), followed by review and implementation.

With the Board of Investment and Board of Trade being set up, smoother communication could also create room for a rebound in China-US investment cooperation in non-critical strategic areas, although the pace could remain constrained by US investment screening and corporate compliance costs.

Relatedly, China's ODI rules were updated on 1 June (State Council, 1 June). The new Outbound Investment rules, effective from 1 July, provide clarification on what constitutes compliant overseas expansion, while reinforcing national security guardrails. We do not view it as necessarily contrary to China's stated goals of further two-way opening up but rather aims to provide clarity around encouraged and prohibited actions which may impact national security. Non-sensitive channels are likely to still receive the greenlight to promote further ODI expansion as part of the China going global theme and BRI theme.

The regulation strengthens the outbound investment security review regime and tightens controls over the export of technology, data and services, particularly relevant for sensitive sectors such as AI. It also codifies a formal toolkit for responding to discriminatory measures, including investment barrier investigations, countermeasures, and restrictions on transactions and entry, aligning with the countermeasure framework embedded in the April supply-chain security rules (see [China macro tracker](#), 9 April 2026). A more institutionalised set of countermeasures may also help China manage external frictions, in light of the recent trade tensions with the EU.

Industrial profits concentrated in upstream petrol-chemical and AI-related industries

Industrial profits rose 25% y-o-y in April, accelerating from Q1's 15.5% growth. Improvements on the pricing side have helped drive up profitability (chart 2), but most of the outperformance remains concentrated in certain upstream energy related industries (e.g. petrol, chemicals) and those related to the AI push (e.g. non-ferrous metals, computer and electronics) (chart 3).

By sector, higher energy prices amidst the Middle East conflict have lifted profits in petroleum processing and chemical products. However, there are signs that supply chain disruptions are starting to impact related production (chart 16, 18). While China may have relative resilience in petrol-chemical related production (see [China macro tracker](#), 1 April 2026), prolonged closure of the Strait of Hormuz still poses risks.

Meanwhile, policy-led industrial upgrading and AI-related investment demand continue to support momentum in high-end manufacturing. The profit margin of computer and electronics expanded further, while the profit margins across other and downstream industries were still relatively subdued.

Looking ahead, measures aimed at curbing involutionary competition and improving pricing discipline could help ease price pressures in some sectors. However, it remains to be seen how much recent price improvements in upstream sectors will translate to downstream sectors, though without improvement in underlying demand, it is more likely to lead to an erosion of profit margins rather than improved profitability. Thus, a more sustainable and broad-based profit recovery will still depend on a further strengthening of domestic demand, such as additional consumption support and related investment demand driven by new urbanisation.

Table 1. Key Indicators for Urban Renewal during the 15th FYP Period

No.	Indicator	2025	2030
1	Renovation volume of dilapidated urban housing (10,000 units/rooms)	[25]	[50]
2	Number of newly launched renovation projects for old urban residential communities (10,000 communities)	[24]	[11.5]
3	Number of upgraded old neighbourhoods/blocks (projects)	[900]	[1500]
4	Number of renovated urban villages (projects)	[4100]	[4000]
5	Number of restored historic buildings (10,000 sites)	[1]	[1.5]
6	Area of newly built and expanded sports venues (10,000 hectares)	[12.7]	[12.8]
7	Area of upgraded/renovated urban park green space (10,000 hectares)	—	[2]
8	Length of renovated urban underground pipeline networks (10,000 km)	[25]	[36.5]
9	Number of renovated existing emergency shelters (10,000 sites)	—	[5]
10	Digitalisation rate of basic urban housing information (%)	—	>95
