

Kingmed (603882.SS): 1H26 prelim NP beat; Launching new equity incentive plan; Buy

Kingmed released its 1H26 preliminary results on July 13, 2026. Its net profit ranged from Rmb170mn to 220mn (vs -85mn net loss in 1H25), which beat GSe (Rmb156mn). Per the company, the better-than-expected earnings were mainly driven by continued cost control and progress in digital transformation, which helped improve operating efficiency. On the same day, the company announced its 2026 equity incentive scheme. Full vesting requires revenue growth of no less than 6%/14.5%/26% in 2026/27/28 versus the 2025 base, implying annual revenue growth of c.6%/8%/10%, respectively. The corresponding net profit excluding non-recurring items targets are Rmb390mn/500mn/600mn.

We believe the incentive targets have likely already factored in the potential decline in testing volumes following the implementation of DRG 3.0, as well as possible price reductions arising from the nationwide standardization of medical service pricing. On the profit side, however, the company expects to mitigate the impact through tighter cost and expense control, including passing part of the cost pressure upstream to suppliers, expanding its laboratory center network, and further improving operational efficiency through digitalization and intelligent management. As such, management does not expect these policy headwinds to have a material impact on earnings. Based on this prelim results as well as the equity incentive plan, we have revised our 26-28E estimates. Maintain Buy.

Investment thesis

Kingmed is the leading player in China's ICL (independent clinical laboratory) industry. While investor concerns have focused on post-Covid margin compression and accounts receivable risks, we believe industry competition is now easing as supply-side rationalization accelerates under tighter compliance and DRG/DIP reforms. Despite near-term weakness in high-end testing, Kingmed is well positioned to offset this headwind through rising outsourcing penetration and market share gains from industry consolidation. Our proprietary adjusted margin indicator suggests normalized profitability is stabilizing and approaching an inflection point. With improving earnings visibility and valuation still reasonable relative to the recovery outlook, we are Buy rated on Kingmed. Key events to watch: 1) pace of industry consolidation and share gains; 2) trajectory of margin recovery; 3) progress in accounts receivable collection.

Price Target Risks & Methodology

We are Buy-rated on Kingmed with a 12-month target price of Rmb36. Our valuation is based on a 5-year exit P/E methodology with: 1) a discount rate of 9.5%; 2) global peers P/E at 21.8x. Key risks: 1) Slower-than-expected recovery in industry outsourcing demand; 2) Prolonged weakness in high-end test demand; 3) Intensified pricing pressure under VBP and local procurement policies; 4) Slower pace of industry consolidation.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
