

Commodity Market Positioning & Flows

Agri and precious metals drive global commodity open interest decline

- The estimated value of open interest across tracked commodity markets decreased by 1% WoW (\$14 billion) to \$1.8 trillion, falling for three consecutive weeks (as of 5 Jun) (Table 2, Figure 2). The decline was led by agri and precious metals markets as prices across grains & oilseeds and gold & silver fell sharply over the week, driving the overall open interest decline even as total net contract-based flows were supported by inflows into metals. On the macro front, our economists see the strong US employment report as reinforcing their view that a cyclical lift in global business spending is now broadening to hiring in a manner that will cushion the energy price drag on household purchasing power. Meanwhile, the combination of a cyclical lift alongside sticky and elevated inflation furthers the case for a Fed hike ahead ([Global Data Watch: Yes, and it counts](#), Kasman et al, 5 June 2026).
- The estimated value of net investor positioning aggregated across global commodity futures markets remained broadly flat WoW at \$223 billion as of the latest data available (Table 1, Figure 3, Figure 4). Net length in energy markets decreased by \$7.7 billion WoW, as investors cut length across Brent and Dubai crude oil benchmarks and across TTF Natgas. Net length in precious metals increased by \$10 billion WoW and net length in base metals increased by \$2 billion WoW, led by gold and copper respectively. Net length in agri markets decreased by \$6 billion WoW led by a decline in grains & oilseeds. JPM QDS's latest projections, as of June 8, indicate that positioning across commodity markets is expected to decline further by nearly \$15 billion, primarily from a decline in agri (-\$10 billion) and precious metals markets (-\$3 billion).
- The Global Commodities Inventory Monitor (GCIM) remained broadly stable in May at 69.4 days-of-use. On an ex-China basis—which is a proxy for globally tradeable inventories—the monitor also remained stable in May at 58.6 days-of-use. Across the GCIM, rising US natural gas availability was offset by declines across oil and aluminum availability. Agri availability was largely stable across both monitors over the month. Stripping out the seasonal impact of US natural gas storage, GCIM through May remained broadly stable at 73.2 days-of-use. Ex-China commodity availability (ex US natural gas) also stabilized at 64.7 days-of-use in May. Across the GCIM (ex-US natural gas), inventory availability only rose for lead, zinc and nickel.
- The estimated value of open interest in energy markets remained broadly flat WoW at \$819 billion (5 Jun, Figure 6) as the decline in the open interest across the crude oil markets was more than offset by an increase across the petroleum products and natural gas markets. The estimated value of open interest across the crude oil and petroleum products markets declined by \$3 billion, driven by net contract-based outflows of \$10 billion from crude oil markets, partially offset by an increase in prices across crude oil (NYM WTI up 4% WoW) and petroleum products markets (ICE Gas Oil up 5% WoW). Our base case assumes the Strait of Hormuz reopens in June,

keeping Brent near \$100 for the rest of the year, with sub-\$100 monthly averages only late in 2026. However, we note that if the Strait stays closed, each extra month would materially lift prices (roughly +\$5 for 2026 and +\$15 in 4Q26), as inventories deplete further. The estimated value of open interest in natural gas markets increased by 3% over the week to \$6 billion (5 Jun, Figure 13). This was driven by an increase in prices across European and Asian benchmarks (TTF up 4% WoW), further supported by net contract-based inflows of \$2.3 billion across all trader types. We note that ADNOC's Mubarak—the first laden LNG tanker to exit the Strait of Hormuz on April 26—re-entered the Strait on June 3. Despite these sporadic movements, only nine LNG vessels are currently inside the Strait, so exports remain capped until a full reopening. Beyond these cargoes, volumes will need to come from renewed upstream and liquefaction operations (as well as normalizing port logistics).

- The estimated value of open interest in precious metals markets decreased by 3% WoW (\$7.2 billion WoW) to \$257 billion, continuing on a multi-week decline (5 Jun, Figure 8). Across all trader types, the sector saw net contract-based inflows totalling \$5.4 billion WoW, mostly into gold (\$2.4 billion WoW) and silver (\$2.7 billion WoW). While, Managed Money positioning in COMEX Gold futures (as of 2 Jun) rose by 14.7k contracts to ~112k contracts net long. Gold prices have faced selling pressure amid a rates repricing across forward rates markets, and since the start of the Middle East conflict, gold prices have declined by 18%, with further downside risks if the Fed turns more hawkish on strong employment data and potentially higher inflation.
- The estimated value of open interest in base metals markets remained broadly flat WoW at \$239 billion (5 Jun, Figure 9). The sector saw net contract-based inflows across all trader types reaching \$2 billion over the week, which were concentrated in nickel (\$1.2 billion WoW) and copper (\$0.9 billion WoW). With the US tariff review forthcoming, interest has turned back to the COMEX/LME arb dynamics. Later this month, by June 30, 2026, the US Commerce Secretary is to provide the President with an update on whether additional Section 232 copper tariff modifications are necessary. Our view remains that it is more likely than not that the Trump administration will enact an escalating tariff as was laid out in last July's original executive order (i.e. starting at 15% in 2027, increasing to 30% a year later) to 1) ensure that all the copper that has already been imported into the US stays onshore and 2) keep this excess US inventory as a critical reserve, rather than enact policy which incentivizes it to quickly destock in the coming years. A continued strong import pull into the US in the coming quarters would continue to strain ex-US cathode supply, particularly over periods where China's import arb is also open.
- The estimated value of open interest across environmental markets decreased by 4% WoW to \$73 billion (5 Jun, Figure 7). This was driven by a 6% decline in the EUA prices over the week, while net contract-based flows were positive at \$1.4 billion, primarily into EUAs. Investment Funds increased their net long position across EUAs as of 29 May to 51.2k lots, up by 12.2k lots WoW.
- The estimated value of open interest in agricultural markets decreased by 3% WoW to \$382 billion (5 Jun, Figure 10, Figure 14). This decline in OI was largely driven by sharp declines in prices across grains & oilseeds markets. Across all trader types, net contract-based inflows were \$1.2 billion WoW, as outflows from grains & oilseeds (-\$1.6 billion WoW) and livestock (-\$2 billion WoW) were more than offset by inflows into softs markets (\$4.8 billion WoW).
- Price momentum largely decreased across most of the complex over the week (5 Jun, Figure 17, Figure 18). The long-term momentum trading signal on Kansas Wheat, CBOT Soybeans and ICE Cotton switched negative to a 'sell' signal during the week. The short-term momentum trading signal on TTF switched to 'buy', while the signal on LME Nickel switched to 'sell' during the week. Meanwhile, the short-term price momentum trading signals on CMX Gold, CMX Silver, NYM Platinum, NYM

Palladium and ICE NY Cocoa exceeded their respective extreme-negative thresholds, indicating a potential trend exhaustion.

See [Agricultural Commodities CFTC COT Report](#) for relevant supplemental data across agricultural markets.

Price momentum and trading signals

Figure 17: Price momentum (z-scores) and trading signals across major commodities

*see methodology in Figure 18

Source: Bloomberg Finance L.P., J.P. Morgan Commodities Research, as of June 5, 2026

When the z-score (indicator of momentum) reaches 0, known as the switch point, it often triggers a change in signal from buy-to-sell, or sell-to-buy received by stochastic price/trend following trading models. This can drive heightened price volatility in the underlying commodity price when there is a large presence of CTA/trend-following trading models. When momentum reaches extreme levels, either maximum positive or maximum negative, a neutral signal is often sent, to stop or slow buying or selling. This often drives profit taking or an exit of positions.

Framework developed by J.P. Morgan Global Markets Strategy ([Flows & Liquidity](#), Panigirtzoglou, Inkinen et al, 3 June 2026)

Figure 18: Price momentum across commodity markets and trading signals

Optimal lookback period of each momentum strategy combined with a mean reversion indicator that turns signal neutral when momentum z-score exceeds the extreme momentum threshold, and a filter that turns neutral when the z-score is low (below 0.05 and above -0.05) to avoid excessive trading. Lookbacks, current signals and z-scores are shown for shorter-term and longer-term momentum separately, along with performance of a combined signal. Annualised return, volatility and information ratio of the signal; current signal; and z-score of the current return over the relevant lookback period; data from 1999 onward.

Market	Lookback duration	Lookback sessions	z-score 05/06/26	Extreme threshold	Current signal	z-score 29/05/25	Sessions since last signal switch	Information ratio	% change of return index from its MA

Disclosures

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Company-Specific Disclosures: Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan-covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
