

GLOBAL RATES TRADER

Leadership Transitions

As markets move further towards pricing relief in spot commodity markets, we continue to think longer-dated oil prices will be key for more durable disinflation to anchor yields. With the US cyclically outperforming, the signaling at next week's FOMC will determine near-term pricing, with the dots and framing of risks around an on-hold baseline key to curve dynamics. We see multiple routes to a steeper US curve and think that longer term real rates have value on a beta versus nominals. In contrast, European macroeconomic data look less strong. Although 1y1y rates have become less sensitive to spot oil prices, the combination of a hawkish central bank, weak data and a shift in the distribution of energy prices skews risks to the downside for EUR 1y1y and 2y2y rates, and we continue to recommend long 5y5y real rates. We see more compelling prospects for front-end relief in UK rates through next week's BoE; pricing remains highly sensitive to oil prices and reflects too much hike premium versus the fundamentals. While data volatility may make for a gradual process, we think CAD front-end hike pricing can moderate further. Conversely, while a hold is likely next week, the RBA's more proactive tightening approach argues for outperformance further out the curve. In Japan, the prospects for relief are limited given that the economy remains shielded from the inflationary effect of higher energy prices. Instead, a durable US-Iran deal should attenuate both growth and fiscal risks and can create a clearer path for underperformance to migrate in on the curve.

United States and Canada

- **Navigating shifting risks and a new Chair.** Peak rate pricing in the US front-end has moderated and the curve has steepened from the recent lows as the market has returned to optimism about the US-Iran conflict amid the steady decline in oil prices. Even with those shifts, US rates pricing remains squarely towards hikes over the next year heading into the first meeting of Chair Warsh's term, with this week's inflation data a mixed bag that resulted in a firmer-than-expected core PCE translation. The 30-35bp of hike risk through mid-27 implies that a significant probability of multiple hikes is already priced. Given we continue to think a lengthy hold is more likely than hikes, and that the medium-term cutting tail should not be written off, we see risks firmly skewed towards lower 1y1y yields over time, with reds/greens positioned to benefit most from a US-Iran deal. With the support for a shift to balanced guidance already clear at the April

This report is intended for distribution to GS institutional clients only.

meeting, the framing of the labor market, dot plot (specifically the number of 2026 hike projections and whether 2027 shows cuts), and how Chair Warsh presents the decision will be key to curve behavior, in our view. While the approach to communication will itself be a focal point (more below), the new Chair's framing of the current balance of risks will likely be key; a stronger emphasis on the lack of inflation pressure from the labor market and/or trimmed measures of inflation would likely be taken as dovish and support a steeper curve, whereas a more vigilant signal about inflation risks would be seen as hawkish. We think front-end pricing and longer-term valuations (5y5y is roughly fair) favor a steepening bias, and think hawkish and/or oil upside risks are best tactically hedged with positions that would benefit from a pull forward of hike risk.

- **Room for relative real rate relief.** US rate relief has been primarily inflation-led, with longer term real yields only modestly below the post-February highs. While energy has been the common factor driving broader rates pricing and the May core CPI print was below consensus, the composition of this week's inflation data was firmer. Our economists' medium-term outlook for core inflation remains benign, but so long as a cyclical optimism remains in place, we think there should be some floor on inflation forwards which are back to pre-conflict levels. Conversely, additional optimism on disinflation should start to pull real yields lower, and we think real yields can fall meaningfully on renewed concerns about the labor market and/or activity picture. As with steepeners, the risk to traded inflation is a more hawkish Fed that leads the market to further reprice the policy reaction function, taking up real yields for a given level of nominal rates. However, with the bulk of risk premia sitting in the real curve and front-end pricing embedding some hawkish risk, we think being long 10y inflation swap vs 0.25x receive 10y SOFR has value (Entry: 1.44; Target: 1.52; Stop: 1.38).

Exhibit 1: As inflation has repriced lower, we see value to being long 10y real rates on beta vs nominals

Source: Goldman Sachs Global Investment Research, Haver Analytics

- **The power of communication.** Another point of interest beyond the immediate discussion of risks around the policy path will be how Chair Warsh communicates. In the past, he has argued against the Fed providing too much guidance to the market,

noting the risk that by providing forecasts Fed officials might risk “becoming prisoner of their own words.” While we have found that the overall evolution of Fed communication has helped reduce rate volatility and improved the accuracy of markets’ pricing of policy outcomes, the results are somewhat nuanced. Our work suggests that early shifts away from deliberate vagueness towards greater transparency in the mid-2000s have had a more significant effect on volatility than the later additions of the dot plot and post meeting press conference, whose effects are more ambiguous. Focus is also likely going to be on how Chair Warsh intends to conduct the press conferences. Under Chair Powell, press conferences became a more important—and more vol-inducing—instrument of policy transmission than under his predecessors. We overall see some initial upside risks to rates volatility around FOMC meetings as a new communication standard is set and markets adjust.

- **On-hold BoC should see hike premium decay, but no catalyst.** The BoC remained on hold this week, characterizing the risks to the outlook as two-sided but maintaining a baseline of looking through the energy shock. The tradeoff between the hawkish implications of any broadening of inflation risk (which so far remains limited) and the potential impact of further trade tensions with the US (which were characterized as unambiguously dovish in the statement and press conference) remains the main source of tension, with the contributions from growth and policy over the past month roughly balanced (Exhibit 2). We think as time goes by without either of those risks dominating, current hike premium can continue to fade, but it is harder to identify a discrete near-term catalyst, with risks of a bounce back in growth data following the government spending induced pullback in Q1 GDP or renewed geopolitical pressure exerting hawkish pressures.

Europe

- **Inflation persistence driving the EUR front-end.** The ECB became the first major central bank to hike in the aftermath of the war in Iran, motivated by a persistent inflation overshoot in its latest projections. President Lagarde refrained from providing explicit guidance on the upcoming July decision, but relief headlines on a potential US-Iran deal have taken July pricing towards 6bp as of time of writing. This looks low to us, and is likely only to fall further if a conclusive deal is able to restart commodity flows through the Strait of Hormuz – as our oil analysts have argued, while demand reduction and supply diversion have helped keep oil prices rangebound, relief for longer-dated oil prices is likely to be limited. This matters because the hawkish aspects of the ECB’s inflation projections come from the persistence of inflation, rather than the magnitude of the near-term oil spike. This is also evident in the market – while front-end rates have repriced sharply on the rise in oil prices, we have seen little yield decline despite the fall in front-contract oil. The better guide in recent weeks has been z6 oil, which has remained flat and as a result reflects more persistent inflationary risk. This suggests to us there is more room to price sharper relief in the UK front-end (given the gap to our policy rate views), but also that the ECB’s front-footed approach to policy tightening vs G4 peers should see the EUR curve — beyond 1y rates — outperform on selloffs. We maintain our long in 5y5y real OIS on the potential for both nominal rate relief and inflation curve

steepening on any concrete prospects for lower energy prices.

- **UK front-end remains an inflation relief trade.** With no change in rates expected at next week's BoE meeting, focus will be on the Governor's message. So far, Governor Bailey has emphasised that the shift away from cuts already constitutes a tightening, which has served to neutralise some hawkish messaging from other MPC members. With hike premium elevated, we think that UK front-end longs represent reasonable risk reward given the UK activity picture remains soft and the distribution for energy prices has shifted lower from both oil market rebalancing and the prospects for a US-Iran deal. Exhibit 3 shows that even in volatility-adjusted terms, UK rates have exhibited the highest sensitivity to oil prices vs other curves. At the same time, ongoing debates around defence spending are a reminder of the government's limited fiscal room, which we think is unlikely to resolve without some macro relief on inflation and rates. As a result, we continue to expect Gilt risk premium to remain sticky and for UK yields to move lower as a function of inflation relief — stay in GBP forward 2s10s steepeners.

Exhibit 3: UK rates have been the most sensitive to oil moves

Volatility adjusted beta (t-stat) of daily changes in 2y1y swap rates for a 1% change in oil prices (in local currency)

Source: Goldman Sachs Global Investment Research, Goldman Sachs FICC and Equities

Exhibit 4: UK bank Gilt holdings increasing

Banks holdings of Gilts per maturity

Source: Goldman Sachs Global Investment Research, Haver Analytics, BoE

- **Deregulatory tailwinds to Gilt spreads.** Our banks team have flagged the potential for the BoE to adjust the implementation of the leverage ratio for UK banks at its next financial stability report, released 7 July, with up to £250bn of balance sheet capacity freed as a result. As we have shown, bank ownership of Gilts has been increasing in recent years (see here for more detail, Exhibit 4), and an increase in balance sheet capacity could add further support for Gilts. The direct support to bank Gilt purchases is likely to be relatively modest — if Gilts remain constant as a share of bank assets, this would suggest a modest £4bn of additional Gilt purchases, skewed towards the 0-5y sector. However, as we have argued for the US, by improving intermediation capacity at the systemwide level, increased balance sheet capacity could anchor funding spreads and give other institutional investors confidence in market liquidity. Although there are no signs of obvious strains in UK funding markets, borrowing at the BoE continues to trend up, especially through the Short-Term Repo facility (STR), and the Gilt market is increasingly reliant on

leveraged buyers. This suggests that these upcoming changes should offer a tailwind for Gilts on asset swaps, reaffirming that the most pressing risk for Gilts is not supply, but macro risks from growth, inflation and monetary policy.

- **NOK vs CHF curve divergence justified.** Next week, our economists expect both Norges Bank and the SNB to leave rates unchanged, but divergence in policy outlook is driving a steeper CHF vs NOK curve (Exhibit 5). In Norway, after restarting its hiking cycle at the last meeting, a hold next week likely represents a pause rather than the end of the cycle: wage growth remains close to 5%, domestic price pressures remain firm, and our economists continue to see one more hike in September to 4.5%. In contrast, the SNB looks comfortably on hold: inflation has picked up only modestly due to higher energy prices, and labour market conditions are soft. In volatility-adjusted terms, the CHF curve remains sensitive to oil prices, but via the term premium; the limited inflation impact should leave CHF front-end less reactive than peers to any oil reversal in basis point terms (Exhibit 3). If energy stress fades or the Strait of Hormuz re-opens, CHF forwards should lag the rally in higher-beta front-ends, while on a renewed oil shock they should outperform markets where front-end repricing is more tightly linked to energy-sensitive policy expectations. This points to further steepening in CHF vs NOK rates.

Exhibit 5: Divergence in policy outlooks should drive the widening further

NOK and CHF 2s10s swap curves

Source: Goldman Sachs Global Investment Research, Goldman Sachs FICC and Equities

Exhibit 6: Belly yields have continued to move higher in tandem with traded inflation

Source: Goldman Sachs FICC and Equities, Goldman Sachs Global Investment Research

Japan

- **BoJ Hike Unlikely to Stem JGB Risk Premium.** Next week's BoJ meeting is unlikely to turn the tide on JGB risk premia. Our economists expect a hike, in line with consensus and market pricing, and for the BoJ to maintain its roughly semi-annual pace of hikes thereafter. Governor Ueda has signaled the need to secure market confidence that the BoJ will properly control inflation, and a hike is a step in that direction. However, markets continue to imply that a gradual approach to a 1.5% terminal rate may be insufficient towards achieving that goal, while the perception of political constraints on the potential pace of tightening further complicates the market's confidence in the Bank's ability to tame inflation risks. As a result, belly yields have continued to move higher in tandem with traded inflation (Exhibit 6), and

will likely continue to do so unless the data turns. Continued JGB underperformance is likely, especially in the belly, without a more convincing hawkish signal, such as faster hikes, from the BoJ. Next week's meeting will also include an update on QT, where our economists expect the BoJ to continue with its current JGB purchase plan through March 2027 and keep purchases steady at ¥2tn from April 2027 onward. The progress of QT has so far had little adverse impact on funding costs. Meanwhile, although long-end JGBs have tended to underperform swaps in sharp selloffs, spreads have retraced more quickly than rate levels, suggesting appetite to buy on signs of consolidation.

Australia and New Zealand

- **The hold before the final RBA hike.** Following three hikes so far this year, combined with the oil shock, activity data has begun turning in Australia, with a surprise rise in the unemployment rate and weaker-than-expected activity data, as measured by our MAP indices. This has stabilized the forwards, with the curve pricing a hump-shaped front-end that implies about 15bp of hikes to the year-end peak. Our economists expect the RBA to hold next week but still expect one final hike in August to dampen the broadening-out risks from the supply shock, to a terminal rate of 4.6%. In our view, that leaves some room for further front-end cheapening, and given the expected subsequent policy normalization, we also expect greater 1s3s inversion as the policy tightening begins to feed through the economy.

Disclosure Appendix

Reg AC

We, George Cole, William Marshall, Simon Freycenet, Isabella Rosenberg, Friedrich Schaper and Loic Mathys, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Contributing Authors: George Cole Goldman Sachs International, William Marshall Goldman Sachs & Co. LLC, Simon Freycenet Goldman Sachs Bank Europe SE - Paris Branch, Isabella Rosenberg Goldman Sachs & Co. LLC, Friedrich Schaper Goldman Sachs & Co. LLC, Loic Mathys Goldman Sachs International.

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Option Specific Disclosures

Price target methodology: Please refer to the analyst's previously published research for methodology and risks associated with equity price targets.

Pricing Disclosure: Option prices and volatility levels in this note are indicative only, and are based on our estimates of recent mid-market levels (unless otherwise noted). All prices and levels exclude transaction costs unless otherwise stated.

General Options Risks – The risks below and any other options risks mentioned in this research report pertain both to specific derivative trade recommendations mentioned and to discussion of general opportunities and advantages of derivative strategies. Unless otherwise noted, options strategies mentioned in this report may be a combination of the strategies below and therefore carry with them the risks of those strategies.

Buying Options – Investors who buy call (put) options risk loss of the entire premium paid if the underlying security finishes below (above) the strike price at expiration. Investors who buy call or put spreads also risk a maximum loss of the premium paid. The maximum gain on a long call or put spread is the difference between the strike prices, less the premium paid.

Selling Options – Investors who sell calls on securities they do not own risk unlimited loss of the security price less the strike price. Investors who sell covered calls (sell calls while owning the underlying security) risk having to deliver the underlying security or pay the difference between the security price and the strike price, depending on whether the option is settled by physical delivery or cash-settled. Investors who sell puts risk loss of the strike price less the premium received for selling the put. Investors who sell put or call spreads risk a maximum loss of the difference between the strikes less the premium received, while their maximum gain is the premium received.

For options settled by physical delivery, the above risks assume the options buyer or seller, buys or sells the resulting securities at the settlement price on expiry.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information

on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst – SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details can be found at: <https://www.goldmansachs.com/worldwide/india/documents/Grievance-Redressal-and-Escalation-Matrix.pdf>, and a copy of the annual audit compliance report can be found at this link: <https://publishing.gs.com/content/site/india-annual-compliance-report.html>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for “professional investors” within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither “registered banks” nor “deposit takers” (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for “wholesale clients” (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom’s departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst’s judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not

necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
