

Americas Life Sciences Tools & Diagnostics: 2Q26 Earnings Preview: GS Tools Tracker and China Stimulus Tracker Updates

Executive Summary

Year to date, Tools saw underperformance versus the broader market (return of -9% vs S&P 500 +10%), as 1Q performance for several names came in line with guides that were previously expected to be conservative. The Tools space is yet again in a position where organic growth needs to show sequential improvement throughout the year in order to meet/beat full year guides for several names in our coverage. We continue to be focused on several factors which we believe could drive end market improvements and sequential growth including **1**) CDMO demand driven by onshoring trends to offset tariff (**TMO, A**), **2**) bioprocessing equipment which could potentially see an inflection late 2026/early 2027 (**DHR**), **3**) respiratory testing headwinds rolling off in 2Q26 (**DHR, WAT**), **4**) improved clinical stage biotech funding which could start to flow through to spending in 2H26 (**TMO**), **5**) continued investment in downstream Pharma manufacturing (**WAT, A, MTD**), and **6**) industrial strength driven by semiconductors and cyclical patterns (**A, BRKR**). We remain cautious on the potential recovery in US Academic & Government and while we are encouraged by recent strength in preclinical biotech funding, we believe this will take time to be reflected in spending patterns.

Recent investor conversations revolved around the magnitude and timing of the ongoing recovery, where focus for the quarter is on management commentary of end market health and assessing if the current growth rates reflect a fundamentally broken long-term growth algorithm or a temporary post-pandemic aftermath. We continue to believe the current valuations represent attractive entry points for several names in our space as growth will likely accelerate from here, albeit at an uncertain pace. In this note, we update our **GS Tools Tracker** which observed a slight acceleration in growth in 2Q26 relative to 1Q26, and in a separate note we update our **GS China Stimulus Tracker**.

GS Tools Tracker Update

What is the GS Tools Tracker?

The GS Tools Tracker is a proprietary market growth model which compiles 17 quarterly datasets in the 4 distinct Tools end markets (Biopharma, Industrial, Clinical Diagnostics, and Academic/Government), then weights the datasets according to their relevance to each end market, to help determine growth estimates by end market. It then weights the end markets growth by Tools aggregate exposure to provide a total market growth estimate on a quarterly basis. The growth fluctuates quarter to quarter, in line with Tools company revenue growth, but has a long term average growth rate of ~5%, in line with market growth rate estimates from management teams in the space. Generally, Biopharma is the fastest growing end market in

the Tool Tracker with a long term average growth rate in the HSD range, with Industrial at LSD, Clinical Dx at LSD and academic at MSD. We acknowledge certain dynamics will not be accounted for in the tracker including ex-US academic funding, clinical diagnostic menu expansion/pricing, and biosimilar drug volume uplift, but we view the tracker as a tool to help orient investors and provide a dashboard-type view of the market as a whole. **Overall the GS Tools Tracker has shown an 86% correlation with average Tools revenue growth and is correct 80% of quarters in determining acceleration or deceleration in growth.**

For more information on our GS Tools Tracker and our previous update, please see our Life Science Tools initiation note [here](#).

GS Tools Tracker 2Q26 Update

The GS Tools Tracker compiles 17 distinct data sets to help inform our market growth estimates both historically and one-quarter forward. We update our data as of the date of this report and include key insights within each end market below. We note that some datasets are based on GSe or have not yet released data for the last month of the quarter, so our market growth estimate for 2Q26 may be subject to change.

Broadly this quarter we observed a **slight acceleration in underlying market data trends in 2Q26 over 1Q26**, largely driven by step-ups in both the **Industrial and Academic (albeit still negative)** end markets with **clinical roughly flat and biopharma down ~2% sequentially, off a strong 1Q**. While this is largely in line with guidance set forth by several companies in the space, which called for acceleration in growth in 2Q26, we view the two quarters in a row of our end market tracker signaling an acceleration as an encouraging sign for the Tools companies as we enter the second half of 2026 to drive organic growth profiles. While idiosyncratic factors remain for each company, the health in the underlying end markets seem to continue inching higher. For more detail, please see the end market takeaways below, and reach out to our team for underlying data.

- **Biopharma:** According to our tracker, 2Q showed low double digit growth in the Biopharma end market, driven by broad based strength in the majority of datasets we track, although decelerating slightly against a strong 1Q26. The acceleration was led by biotech R&D, China Capex, and Biotech Capex. We note our Biotech VC and IPO data remained elevated for the third quarter in a row which according to our estimates, takes ~1 year+ to show up in biotech capex spending, aligning with recent management commentary ([Exhibit 11](#)).

Exhibit 11: Biotech Capex tends to lag funding by >1 year
4Q Rolling Average

Source: Goldman Sachs Global Investment Research, Pitchbook, Dealogic

- **Industrial:** The industrial end market grew at the high end of high single digits according to our tracker, accelerating above 2Q and continued to remain well above the historic average of ~LSD%. The ~3pt acceleration in the end market was largely driven by a sequential step up in PMI and semi capex offset by weaker new orders of durable goods. We continue to view the industrial end market as favorable for our Tools coverage given the cyclical upswing, however call out recent macro uncertainty as a key risk. We believe, according to historical patterns, there is still room left to grow in the current cycle as we have not seen the industrial growth rate reach mid-teens which is the high water mark informed by historical patterns. We call out Agilent's CAM segment as a key beneficiary, which has tracked closely with our Industrial tracker historically.
- **Clinical Diagnostics:** Clinical accelerated in the quarter vs 1Q and returned to slightly positive growth driven by sustained lower routine testing volumes while hospital admissions accelerated by ~1ppt. We note that our clinical tracker is largely US based, and thus reimbursement dynamics in China would not be reflected in this growth estimate.
- **Academic/Gov:** According to our tracker, the academic end market remains well below historic averages, with funding outlays for the National Science Foundation (NSF) posting negative growth for the 4th quarter in a row, while National Institutes of Health (NIH) posted a slight acceleration in outlays off 1Q but still in the LSD growth range. We note our data in this end market is US based, and China stimulus/European dynamics would not be included. While our tracker is focused on funding outlays, we have observed continued uncertainty surrounding academic funding as many researchers face multi-year grant dynamics, degradation in PhD

admissions, and continuing conversations centering around hesitancy to spend funding on larger capital equipment, despite funding starting to come through.

Overall, this led to an acceleration in growth in 2Q26 over 1Q26, and while we recognize there are certain dynamics that the Tools Tracker will not pick up on, **we view this as an encouraging sign for the Tools end markets, especially given investor debate on the ability for tools companies to durably reaccelerate growth into the 2H and exiting 2026.** Macro related headwinds, including those in the Middle East could be a risk to our data, given we believe most companies in our coverage have ~LSD exposure to the region, which is not well-represented in our Tools Tracker.

GS China Stimulus Tracker

What is the GS China Stimulus Tracker?

We track China stimulus orders for **TMO, DHR, A, WAT**, and **BRKR** for instruments including (but not limited to) Liquid Chromatography, Gas Chromatography, Mass Spectrometry. Since the launch of China's equipment renewal stimulus in March 2024, we have tracked over 1,100 instrument orders across our China exposed instrument companies under coverage and include our most recent update to our data below.

For more information on our China Stimulus Tracker and the 2Q26 update, see our separate note [here](#).

GS China Stimulus Tracker 2Q26 Update

In 2Q26, leveraging our China equipment renewal bidding tracker, we tracked 65 total orders, a decline of (-57%) YoY across TMO, DHR, A (3Q26 for A), WAT, and BRKR. We think **BRKR** should be the most insulated from the lack of broader stimulus-related order growth this quarter as 2Q26 orders show ~55% YoY growth versus other Tools companies being down. Please see a more detailed breakdown of our data below:

Life Science Tools Previews

Thermo Fisher Scientific (TMO) — Buy

For 2Q26, we expect top line organic growth of 3.1% with revenues/EPS of \$11.73bn/\$5.70, compared to FactSet consensus of \$11.71bn/\$5.72.

Quarter

- **Guidance:** TMO reiterated its 2026 organic revenue growth guidance of 3-4% and raised its adj operating margin expansion to 70 bps up from 50bps. The company continues to expect 2026-2027 organic growth of 3-6%. For 2Q26, TMO set expectations for organic growth at ~3%, which includes steady underlying end market trends plus the normalization of prior-quarter headwinds (selling days, CDMO contract phasing). YoY growth is expected by management to improve sequentially as the ~100 bps headwind from one less selling day in 1Q does not

repeat, and Pharma Services (CDMO) revenue phasing becomes less of a drag, though revenue remains weighted toward the second half. The company still expects end market dynamics remain largely unchanged in 2026 with a 100bps YoY benefit in Covid-related revenue rolling off.

Exhibit 24: Phasing of 2026 Organic Growth Estimates

Source: Goldman Sachs Global Investment Research, FactSet

- **Key Debates:** Key debates heading into 2Q26 earnings for TMO continue to be focused on the level of conservatism baked into the FY26 guide of 3–4%. In our view, there are several factors which will help accelerate growth off of the 1% posted in 1Q including, **1)** CDMO revenue which is weighted towards the back half of the year, **2)** strength in CRO revenue as funding for clinical stage biotech in 2H25 translates to spend in 2H26, **3)** continued/accelerated CRO share gain post Clario acquisition closing, **4)** lapping easier comps in US Academic & Government, and **5)** benefit from selling days impact in 4Q (which negatively impacted 1Q). Additionally, the company could see strength in CDMO bookings related to reshoring efforts, driven by the applications required by the U.S. Department of Commerce for Pharma Tariff Adjustments which were due by 6/12/2026 (*reference link [here](#)*). These applications could spur bookings growth as Pharma/Biotech (who don't already have an MFN deal) look to solidify their onshoring plans during their application process. Key risks, however include persistent macroeconomic headwinds driven by cautious biotech spending, especially in the preclinical end market which has only recently seen improved funding, and US A&G spending which checks suggest continued weakness.

Our Thesis

- TMO is a well diversified compounder which has experienced multiple compression of 3.0x YTD (NTM EV/EBITDA), as expectations around the slope of recovery were weakened by their muted growth in 1Q. We believe this represents an attractive entry point for a high quality business that has several levers for upside to 2026 guide, including those mentioned above, with an additional benefit in 2Q from U.S. Department of Commerce Tariff-reduction Application deadline in June, which could lead to better than expected booking commentary from the company regarding their US-Based CDMO business.

Model

- We model 2026/2027/2028 revenue and EPS of \$47.81bn/\$50.23bn/\$53.13bn and \$24.84/\$27.15/\$30.26. We maintain our target Q5-Q8 EV/EBITDA multiple of 19x and price target of \$570.

We are Buy rated on TMO. Our 12-month price target is \$570 on Q5-Q8 estimates. Our valuation methodology uses a target EV/EBITDA multiple of 19x. Key risks include (1) weakness in the early stage R&D end market hampering their long-term growth expectations, (2) incremental spending weakness from large pharma, should additional MFN deals not materialize, may drive reduced R&D spending, (3) reduced expectations around long range plan as end market recovery path becomes more uncertain, and (4) continued weakness in the US A&G market.

Danaher Corp. (DHR) — Buy

For 2Q26, we expect top line organic growth of 2.0% with revenues/EPS of \$6.10bn/\$1.84, compared to FactSet consensus of \$6.10bn/\$1.83.

Quarter

- **Guidance:** DHR's reiterated its 2026 full year organic growth guide in 1Q towards the lower end of the 3-6% range they laid out for 2026-2027, or ~3-4% for the year. In 2Q26, DHR expects organic revenue growth of +LSD and operating margin of 26.5% driven by lower respiratory volumes and accelerated growth investments, which implies margin compression of 80bps YoY. Additionally, organic growth and margin expansion continue to be back half weighted for the year, as they start to lap headwinds in 2H including 1) the impact of dynamics with two Aldevron customers, 2) US academic and government funding, and 3) China diagnostics policy headwinds.

Exhibit 25: Phasing of 2026 Organic Growth Estimates

Source: Goldman Sachs Global Investment Research, FactSet

- **Key Debates:** Investor questions heading into 2Q have largely been focused on the credibility of the 2H acceleration implied in guidance and timing of the bioprocessing equipment recovery. The company has called out easier comps in the back half of the year, including within Aldevron, China Diagnostics, and US A&G, as well as the 1Q respiratory headwind rolling off which should help naturally lift the

growth rate throughout the year according to management expectations. In terms of levers for upside, DHR's 30% growth in 1Q Bioprocessing equipment orders is not currently expected by management to convert to revenue in 2026, however given the typical 6-18 month lead time, these orders have the possibility of converting in this calendar year, leading to upside to current guide. Given much of the guidance step up throughout the year is a function of easier comps in several key areas, we believe investor debate is centered on the timing and magnitude of underlying end market improvement which would represent upside to company guide.

Our Thesis

- DHR has a robust bioprocessing (BP) franchise growing +HSD in a muted equipment environment, however, we believe the overhangs impacting equipment growth are beginning to alleviate and underlying biologic volumes continue to see robust growth, driving additional bioprocessing capacity demand. As the recent growth in orders translate to revenue, we could see accelerating growth in the bioprocessing portfolio while other end markets (like US A&G and Aldevron) lap easier comps and become less of a drag. Recent price action represents an attractive entry point to benefit from the BP equipment recovery, though we continue to watch respiratory in the back half of the year given the company is expecting a return to normal respiratory season in 4Q.

Model

- We model 2026/2027/2028 revenue and EPS of \$25.51bn/\$26.92bn/\$28.64bn and \$8.44/\$9.14/\$9.99. We maintain our target Q5-Q8 EV/EBITDA multiple of 19x and price target of \$230.

We are Buy rated on DHR. Our 12-month price target is \$230. Our valuation methodology uses a multiple based approach where we use a target Q5-Q8 EV/EBITDA multiple of 20x. Key downside risks: (1) Incremental weakness for both academic and early stage drug discovery may weigh on our Life Sciences growth expectations, (2) Lingering China Diagnostic headwinds beyond 2026, (3) Bioprocessing equipment remaining a laggard throughout 2026, (4) potentially driving our bioprocessing estimates lower.

Waters Corp. (WAT) — Buy

For 2Q26, we expect top line organic growth of 4.6% with revenues/EPS of \$1.62bn/\$2.98, compared to FactSet consensus of \$1.62bn/\$3.01.

Quarter

- **Guidance:** Following 1Q outperformance with double-digit organic growth in the legacy WAT business, the company raised its guide for FY2026 which includes organic revenue growth in the range of +6.5% to +8.0% (previously +5.5% to +7.0%) and maintained the acquired business contribution of \$3bn and \$35mn synergies, despite the \$40mn 1Q beat, helping to derisk the back half of the year. In 2Q26, WAT

guided to an organic revenue growth range of +6.0% to +8.0% with \$802mn of revenue contribution from the acquired business. The acquired business contribution implies ~2.5% growth in the BD asset YoY in 2Q. Further, 2Q bears the full impact of higher interest expense and share dilution ahead of cost synergy realization, creating a near-term headwind following 1Q, while guidance embeds conservative assumptions around the base business and the acquired asset, creating a more derisked set up into the quarter.

Exhibit 26: Phasing of 2026 Organic Growth Estimates

*WAT Core Organic Growth

Source: Goldman Sachs Global Investment Research, FactSet

- Key Debates:** Since the 1Q print and guide raise, WAT is up +20% largely on investor sentiment improving around the durability of the integration-driven growth algorithm alleviating downside risk concerns to the acquired asset. Investor debate, has now shifted to 1) the ability for the company to execute on the ramp in growth assumed in the acquired asset guidance for the year, 2) the level of conservatism baked in to core growth, and 3) how much room is left for the stock to run given the premium multiple. Within the acquired business, 2Q guidance of ~2.5% growth implies a ~250bps step-up from 1Q, driven by the respiratory diagnostics headwind rolling off. However, should the company start to benefit from improved commercial execution in reagents, microbiology replacements, service attachments, or cross selling benefits earlier than expected, this could drive upside to the 2Q guidance as these initiatives are not expected to take hold until the back half of the year. Additionally, our **recent site visit** highlighted untapped pricing power, that can drive upside beyond the 50 basis points already baked into the 2026 framework, should the pricing initiatives take holder sooner than expected. Within the core business, the company has several ongoing factors which help drive above-peer organic growth including robust downstream Pharma demand, ongoing LC-MS replacement cycles, GLP-1 exposure, and cross-selling Mass Spec into the acquired channels. Additionally, we view the 2026 core guide as conservative, as continued strength in China and Chemistry would represent upside to current growth expectations with both of these tracking well above their full-year expectations in 1Q. While the multiple has re-rated higher in recent months, the combined business deserves a premium multiple given the reduced cyclicality of the business, scale/cross selling advantages, pricing, and it represents an execution-based recovery as opposed to

an end market-based recovery.

Our Thesis

- In addition to strong underlying growth drivers, we believe the business has several levers for upside to 2026, including China and Chemistry in the core business and pricing in the acquired business. Longer term, we believe the recent transaction expands WAT's reach across diagnostic and clinical research settings, diversifying their revenue streams and providing several cross-selling opportunities. Additionally, we view the execution opportunity as challenging, but achievable within the BD asset and believe the market will continue to reward as it is proven out over time.

Model

- We model 2026/2027/2028 revenue and EPS of \$6.45bn/\$7.10bn/\$7.52bn and \$14.56/\$16.19/\$17.92. Further, in our model we update the phasing of WAT margin assumptions to reflect more near term pricing and commercial strategy execution. We raise our target Q5-Q8 EV/EBITDA multiple to 18x from previous of 16x to reflect updated peer comps and improved confidence in commercial execution following our site visit. We raise our price target to \$425 from \$380 to reflect the revised multiple.

We are Buy rated on WAT. Our 12-month price target is \$425. Our valuation methodology uses a target EV/EBITDA multiple of 18x Q5-Q8. Key risks include (1) the recent acquisition of BD Bioscience and Diagnostic Solutions business poses integration risk including unforeseen costs, market share loss, manufacturing issues, and others, (2) Incremental spending weakness from large pharma could arise, which may lead to a reduction in capex investments, leading to a shorter than expected instrument replacement cycle, (3) WAT's China exposure in both the core business and acquired asset could be challenged due to policy related headwinds and local competition which could displace WAT, and (4) With 31% of revenue exposed to the industrial end market, macro-related headwinds could negatively impact the growth rates of this segment, potentially suppressing investments in capital equipment.

Agilent Technologies (A) — Buy

For 3Q26, we expect top line organic growth of 5.7% with revenues/EPS of \$1.85bn/\$1.49, compared to FactSet consensus of \$1.84bn/\$1.49.

Quarter

- **Guidance:** Agilent outlined its 3Q26 guide of core revenue growth of 4.4% to 5.9% which implies a step down from 2Q while contemplating tougher comps moving throughout the remainder of 2026. Management expects operating margins to be flat sequentially in 3Q26 over 2Q26 (or up 120bps YoY) largely driven by Ignite efficiencies offset by a return to normal geographic mix and inflationary pressures. The company expects Q4 margin to expand ~220bps sequentially (or 180bps YoY) which is roughly in line with historical sequential 4Q margin step ups over 3Q, which have represented ~200bps sequential improvement in more normalized

environments (pre-Covid).

Exhibit 27: Phasing of 2026 Organic Growth Estimates

Source: Goldman Sachs Global Investment Research, FactSet

Exhibit 28: The GS Tools Tracker Industrial estimates track closely with A's CAM segment 4-Quarter Rolling Average

Source: Goldman Sachs Global Investment Research, Company data

- Key Debates:** While fiscal 2Q earnings for Agilent was characterized by better than expected performance on both the chemical end market and operating margin line, investor debate heading into fiscal 3Q is how durable these trends are in the business. The chemical end market represents ~65% of the company's CAM segment (Chemical and Advanced Materials), with ~15% exposed to exploration and production and ~50% related to refiners. This diversified customer base benefits A, given that when oil prices rise, exploration and production companies generally benefit, leading to more Capex spending, including on A's instruments, even as some refiners may see higher input costs. Additionally, given Gas Chromatography (GC) is a critical component of the chemical manufacturing supply chain, and A has the leading market share of GC's, we believe Agilent's particular exposure to this end market will see durable growth throughout this year and next as the aging installed base requires replacement, insulating them from macro-related headwinds that have impacted others selling into the chemical end market. On Agilent's operating margin line, we highlight key initiatives the company has implemented including strategic pricing, productivity, and supply chain agility, which we expect to continue benefiting the operating margin over time though note that 3Q will likely be offset by a return to normal geographic impact. We continue to field investor questions on the implied 3Q to 4Q expected operating margin sequential expansion of ~220bps, and while the company noted this was in-line with historic seasonality, we remain focused both the step up. Additionally, we will be watching for potential margin impacts related to additional capacity coming online within their CDMO (Train C), though we expect this to mostly be a 2027 dynamic as revenue from this capacity is expected to flow through in Spring of 2027.

Our Thesis

- Agilent is set to benefit from the combination of an ongoing Biopharma instrument replacement cycle with underappreciated industrial exposure entering a cyclical recovery (informed by our Tools Tracker), enabling a differentiated growth profile vs. peers that we do not believe is reflected in current estimates. We believe that

Agilent's recent outperformance in the Chemical end market and operating margin line are durable given the dynamics outlined above.

Model

- We model 2026/2027/2028 revenue and EPS of \$7.45bn/\$7.94bn/\$8.43bn and \$6.06/\$6.71/\$7.53. We maintain our target Q5-Q8 EV/EBITDA multiple of 19x and price target of \$155.

We are Buy rated on A. Our 12-month price target is \$155. Our valuation methodology uses a target 19x Q5-Q8 EV/EBITDA. Key risks include (1) incremental spending weakness from large pharma, should additional MFN deals not materialize, which may drive reduced capex investments, leading to a shorter than expected instrument replacement cycle, (2) within A's China exposure local competition could displace Agilent or various negative geopolitical implications could create headwinds to growth, (3) incremental global macro weakness may put pressure on our favorable view around a cyclical upswing for A's Applied end market, and (4) weakness in NASD and further cancellations in siRNA/mRNA may drive outsized lumpiness in our organic growth assumptions.

Sotera Health — Buy

For 2Q26, we expect top line growth of 5.1% with revenue/EPS of \$309mn/\$0.24, compared to FactSet consensus of \$310mn/\$0.24.

Quarter

- **Guidance:** Looking ahead to 2Q26/FY26, management expects 2Q Sterigenics to be similar to 1Q26 which grew 6.1% cc, Nordion's 1H to represent 40-45% of full year revenue which the company has guided to LSD-MSD% cc, and Nelson Labs to return to slight growth in 2Q. Management expects full year revenue at Sterigenics to grow MSD-HSD% cc, Nordion to grow LSD-MSD% cc, and Nelson Labs to grow LSD% cc which assumes total company pricing of 3-4% with Sterigenics to be at the high end and Nordion/Nelson Labs to be at the low end.

Exhibit 29: Phasing of 2026 Constant Currency Growth Estimates

Source: Goldman Sachs Global Investment Research, Visible Alpha Consensus Data

- **Key Debates:** Following our initiation, SHC has remained a topical name among both LOs and HFs where debate has centered around the durability of Sterigenics growth in the face of deceleration in broader medtech volumes, in addition to litigation dynamics. We believe the company can continue to drive pricing to offset any potential volume weakness, and note that the company expects acceleration in Sterigenics revenue growth in 2H26 driven by lower maintenance downtime, contract visibility, and additional X-Ray capacity coming online. Additionally, while the company has faced several positive litigation related developments in Georgia, investors debate where the valuation could land should we see additional clearing events within ongoing litigation, which could support a valuation re-rating toward historical peers.

Our Thesis

- We view Sotera as a high quality durable business as evidenced by 20 years of consistent revenue growth, driving confidence in the company's ability to offset potentially lower volumes with pricing for sterilizing medtech/pharma products. Further, we believe there has been an improvement in clarity on potential financial

liabilities related to litigation that should be reflected in the multiple over time.

Model

- We update our model which reflects 2026/2027/2028 revenue and EPS of \$1.24bn/\$1.32bn/\$1.40bn and \$0.97/\$1.06/\$1.16 versus previous of \$1.24bn/\$1.32bn/\$1.40bn and \$1.00/\$1.09/\$1.20 to reflect updated depreciation estimates. We raise our target Q5-Q8 EV/EBITDA multiple to 12x from 11x and price target to \$22 from \$20 to reflect revised estimates and refreshed multiple.

We are Buy rated on SHC. Our 12-month price target is \$22. Our valuation methodology uses a multiple based approach where we use a target Q5-Q8 EV/EBITDA multiple of 12x (in line with peer comps).

Downside Risks: 1) EO Regulation and Litigation: SHC faces a number of ongoing cases surrounding their EO facilities as described in detail above. If case count rises significantly, or they lose cases/settle for more than what is currently baked into our valuation, they may be required to pay for damages caused to nearby residents and employees, reducing level of cash they have available to reinvest into the business and heightening concern around EO operations. 2) New technology replacing EO sterilization: Given the recent scrutiny around EO sterilization and potential human health impacts, medical device and Pharma companies may look to shift sterilization away from EO where possible and towards other techniques. 3) Geopolitical concerns: With the United States, Canada, United Kingdom and European Union imposing sanctions against Russian industries, and Russia imposing countermeasures, this could be expanded and potentially impact nuclear reactor operators thus impacting Co-60 supply. Management noted that Russia Cobalt supply risk represents ~0-2% of 2025 revenue.

Bruker Corp. (BRKR) — Sell

For 2Q26, we expect top line organic growth of 4.4% with revenues/EPS of \$853mn/\$0.39, compared to FactSet consensus of \$854mn/\$0.38.

Quarter

- **Guidance:** In 1Q, BRKR reiterated its full year 2026 organic revenue growth of 1-2% and operating margin expansion of 250-300bps YoY (300-350bps organically). In 2Q26, BRKR guided to return to organic revenue growth in 2Q26, in the range of LSD to MSD%, as they lap easier comparisons and operating margins to meaningfully step up sequentially.

Exhibit 30: Phasing of 2026 Organic Growth Estimates

Source: Goldman Sachs Global Investment Research, FactSet

- **Key Debates:** Heading into 2Q26, investors will likely be focused on (1) the inflection in organic growth and visibility into a back-half ramp, (2) the pace of recovery in the US academic & government (A&G) end market, (3) the durability of idiosyncratic growth drivers like semiconductor and defense, and (4) the cadence and drivers of operating margin expansion through 2026. In order to achieve the step up in organic revenue throughout the year, the company has pointed to strength in bookings which was led by industrial research and ex-US A&G, with the company reporting book-to-bill >1x for the last 3 quarters. Additionally, the company will lap easier comps in 2Q, leading to a sequential organic growth step up to LSD-MSD in 2Q from -4.4% reported in 1Q. BRKR has the highest exposure to the US academic end market within our coverage, which saw headwinds related to funding uncertainty starting in 2Q25, and while they should lap easier comps, recent trends in the US A&G market suggest it could take time to fully rebound despite the NIH budget being confirmed for the year, as PhD admissions are down ~15% YoY and multi-year grant dynamics has made the grant application process more competitive with fewer grants being approved in a given year. While US A&G could experience continued weakness throughout the remainder of the year, the 9% semiconductor exposure and LSD% defense exposure could see outsized growth given current trends in the market leading to heavy investor focus on whether these businesses will be able to offset potential continued weakness in US A&G and preclinical pharma/biotech spending. Lastly, BRKR expects operating margin to expand 300-350bps organically YoY (250-300bps reported), with this guidance being set in mid-February 2026, prior to the rising inputs costs related to the US/Iran War. While the company is focused on delivering on this guidance and have called out cost savings actions, Fx, volume-driven leverage, and tariff offsets, we expect investors to remain focused on key inputs costs and the impact this could have on margins.

Our Thesis

- BRKR has outsized exposure to the Academic & Government (A&G) end market and early-stage biopharma research, which we expect to remain under pressure throughout the course of '26 relative to more downstream end markets in the Tools space. However, we highlight several business areas which could provide a potential

offsets to this market, including defense and semiconductor exposure, should growth meaningfully accelerate in these areas off of 2025.

Model

- We model 2026/2027/2028 revenue and EPS of \$3.58bn/\$3.68bn/\$3.85bn and \$2.10/\$2.36/\$2.65. We raise our target Q5-Q8 EV/EBITDA multiple to 11x from previous of 9x to reflect updated peer comps and raise our price target to \$40 from \$35 to reflect revised multiple.

We are Sell rated on BRKR. Our 12-month price target is \$40. We assign a target EV/EBITDA of 11x Q5-Q8 estimates. Key upside risks: (1) Outsized impact from China's equipment renewal stimulus program, potentially offsetting U.S. A&G weakness, (2) Re-investment from pharma into earlier-stage drug discovery which would not show up in our Tools Tracker, (3) Faster-than-expected topline growth may lead to outsized margin expansion without a significant reduction in OpEx, (4) Higher-than-expected semiconductor strength which has remained lumpy over the past several quarters, (5) Clinical diagnostics becoming a more significant portion of overall revenue given the high recurring revenue nature of the business.

Mettler Toledo (MTD) — Neutral

For 2Q26, we expect top line organic growth of 1.4% with revenues/EPS of \$1,017mn/\$10.75, compared to FactSet consensus of \$1,028mn/\$10.80.

Quarter

- **Guidance:** Following 1Q organic growth of 1%, MTD guided the upcoming 2Q26/2026 local currency growth of ~3.0% and ~4.0%. The company also outlined 2Q guide to be ~1.5% organic local currency growth and noted 2Q will realize 2.5% of pricing (implying 2H pricing of ~2%). Contemplated in the 2Q guide is a step down in Product Inspection related to timing of placements which should be offset by the Lab business accelerating off of 1Q and growing LSD% organically.

Exhibit 31: Phasing of 2026 Organic Growth Estimates

Source: Goldman Sachs Global Investment Research, Visible Alpha Consensus Data

- **Key Debates:** Key debates heading into 2Q26 earnings for MTD are centered around (1) the drivers of the implied back-half acceleration in organic growth, (2) the durability of headwinds in the chemical end market, and (3) the potential for additional pricing in the back half. Currently assumed in MTD's guidance is local currency organic growth of ~3.3%, which implies a sequential step up in the back half of the year from organic growth of 1%/1.5% in 1Q/2Q which management believes will be driven by increased activity in the pipeline translating to revenue growth later this year. Additionally, while the Chemical market was negatively impacted by geopolitical dynamics driving oil prices higher, once MTD's specialty chemical customers are able to drive pricing, we should expect to see a recovery in MTD's chemical exposure though it is unclear how quickly this could play out. Lastly, a key focus area for investors remains on pricing as management reiterated ~2.5% pricing for FY26 but saw ~3.5% in 1Q. Should the company start to push additional price beyond expectations in the back half of the year in order to offset rising input costs, this could represent upside to guide.

Our Thesis

- We view MTD's Biopharma and Industrial exposure as well positioned to capitalize on growth trends in the next year related to onshoring and automation, but view

near term trends in the specialty chemical market as uncertain in the timing of a potential recovery.

Model

- We model 2026/2027/2028 revenue and EPS of \$4.21bn/\$4.43bn/\$4.67bn and \$46.56/\$50.96/\$56.61. We maintain our target Q5-Q8 EV/EBITDA multiple of 21x and price target of \$1,340.

We are Neutral rated on MTD; our 12-month price target is \$1,340. Our valuation methodology uses a target EV/EBITDA multiple of 21x on Q5-Q8 estimates.

Key upside risks include: (1) Accelerated impact from US onshoring, (2) Higher than expected pricing power, (3) Outsized service attach-rates at the point of sale and the rolling out of new services offerings may drive growth above our assumptions.

Key downside risks include: (1) Incremental macro weakness and continued PMIs <50 may pressure Industrial growth, (2) Additional tariff rates pressuring the bottom-line, (3) Integration challenges through several recent bolt-on M&A, (4) Increased local competition in China could pressure Industrial/Laboratory growth assumptions.

Revvity (RVTY) — Neutral

For 2Q26, we expect top line organic growth of 0.3% (pro-forma 2.1%) with revenues/EPS of \$732mn/\$1.22. GS pro forma revenue of \$703mn is in line with FactSet consensus of \$703mn.

Quarter

- **Guidance:** Following RVTY's 1Q26 announcement to divest their China Immunodiagnostics (IDx) business, RVTY is now guiding to 2026 organic revenue growth to be in a range of 3-4% (2-3% previously) which contemplates a 50bps FX tailwind (100bps previously) and 75bps uplift from the ACD/Labs acquisition. RVTY now expects pro forma operating margin for the full year to be ~28.4% (28.0% previously) driven by a 30bps uplift relating to the divestiture with the balance driven by operational execution through cost actions. Operating margin in 1Q26 was 23.6% with the company expecting 2Q26 pro forma margin to be ~27% with organic growth of 2-3%. The sequential step up in margin primarily stems from the absence of the extra selling week, slight FX benefit, and the roll off of higher Q1 seasonal spending relating to new product launches and sales efforts.

Exhibit 32: Phasing of 2026 Growth Estimates - Organic vs Pro Forma Growth

Source: Goldman Sachs Global Investment Research, FactSet

- **Key Debates:** Key debates for RVTY into 2Q are centered around the durability of Reproductive Health growth, timing and magnitude of preclinical research spending recovery, and how AI could impact the business moving forward. Following the announcement of the planned China Immunodiagnostics divestiture, investor focus has shifted toward the growth of the proforma portfolio, with updated organic revenue guidance set at 3% to 4%, up from the previous guidance of 2% to 3% (which included the China IDx business). Within Diagnostics, recent strength in Reproductive Health (+LDD% in Q1) and in Immunodiagnostics ex-China (+MSD% pro forma in Q1) have supported confidence in more durable mid-single digit growth, driven by screening demand and improving end-market conditions. Within the life science portfolio, software is expected to see lumpiness in organic growth throughout the year driven by timing of contract renewals which is largely understood, however focus remains on the potential recovery of the early stage

research spending environment, though we note that the company took a conservative approach to guidance that is not reliant on a back half recovery/ramp. Lately, investor debate has largely focused on how AI could potentially impact early stage drug discovery both on how it could impact wet lab work and Revvity's Signals business, which recently announced integration with Anthropic Claude. We will be watching for additional details on this collaboration on the earnings call.

Our Thesis

- While we have seen an uptick in bioetch funding/M&A recently, we believe it may take time to see a significant improvement in drug discovery/preclinical spending specifically, given most of the recent funding is focused on clinical stage assets. While RVTY's portfolio is more exposed to the preclinical market relative to others across our coverage, their guide likely appropriately reflects the uncertainty in the current operating environment.

Model

- We update our model which reflects 2026/2027/2028 revenue and EPS of \$2.96bn/\$3.10bn/\$3.27bn and \$5.45/\$5.94/\$6.53 versus previous of \$2.97bn/\$3.10bn/\$3.28bn and \$5.47/\$5.95/\$6.55 to reflect updated Fx adjustments and tax rate phasing. We do not assume or reflect pending transactions or divestitures in our estimates. We maintain our target Q5-Q8 EV/EBITDA multiple of 14x and price target of \$100.

We are Neutral rated on RVTY. Our 12-month price target is \$100 on Q5-Q8 estimates. Our valuation methodology uses target EV/EBITDA multiple of 14x. Key upside risks include: (1) Faster than expected recovery in early stage research spend, (2) Outsized China Life Sciences growth through continued out-licensing deals, (3) Higher than expected Immunodiagnostics penetration in the U.S., (4) Continued large scale DNA screening collaborations.

Key downside risks include: (1) Potential delays in divestiture of China Immunodiagnostics business, (2) Continued weakness in early stage research funding beyond 2026, (3) Outsized reagent headwinds from reduced US Academic research spend, (4) Incremental instrument weakness.

Diagnostic Previews

Guardant Health — Buy

For 2Q26, we expect top line growth of 35% with revenue/gross profit of \$313mn/\$200mn, compared to FactSet consensus of \$314mn/\$202mn.

Quarter

- **Guidance:** Following 1Q results, GH raised its FY26 guide to 32% to 34% total revenue growth (previously 27% to 30%) including Oncology growth of 28% to 29% (previously 25% to 27%) while reiterating Biopharma & Data revenue growth of +LDD%. The company also raised its Screening revenue guidance to \$186-\$198mn (previously \$162-\$174mn) including volumes of 230k-245k (previously 210k-225k).
- **Key Debates:** GH's stock has benefited from several key catalysts since 1Q earnings, including recent FDA approval of the expanded 740 gene panel for G360 Liquid CDx and UnitedHealth coverage of GH's Shield CRC early detection test. Following FDA approval of the expanded G360 test, investors now expect the company to receive ADLT pricing of \$8,455, as compared to the previous rate of \$5,000, providing significant upside levers to current sell side models. Additionally, while the company was not previously reimbursed by commercial payers for their Shield test, UnitedHealth announced they will begin covering the test in August of this year. The company had previously noted they expected a step down in Shield ASP in 2Q, as they started to remove friction in the system for non-medicare patients (patients younger than 65) given patient tests ages 45-65 would likely result in commercial no-pays, dragging ASP lower. Now, with the combination of reduced friction of volume and improved commercial pricing, we believe there is upside to 2026 screening guide which did not previously include commercial payer coverage. With the stock now trading at a premium multiple, investor debate has shifted towards how much room is left for the stock to continue working. We believe the next key catalyst for the name is receiving breast coverage from MoIDX for their Reveal MRD test, given breast currently represents a large portion of Reveal volumes which is currently not reimbursed.

Our Thesis

- We view GH as a market leader in their therapy selection business, with several upcoming catalysts related to pricing upgrades following FDA approval of the Guardant 360 Liquid CDx, potential MoIDX coverage in breast for the Reveal MRD test, new test contribution from Tissue Therapy Selection ramping, Reveal Ultra Tumor Informed launching, and a clear path to free cash flow profitability through an efficient R&D pipeline.

Model

- We update our model which reflects 2026/2027/2028 revenue and Gross Profit of

\$1.32bn/\$1.72bn/\$2.29bn and \$858mn/\$1.13bn/\$1.52bn versus previous of \$1.32bn/\$1.71bn/\$2.25bn and \$850mn/\$1.12bn/\$1.49bn to reflect updated Shield revenue to the high end of company guidance. We raise our target Q5-Q8 EV/Sales multiple of to 13x from 12x and price target to \$185 from \$165 to reflect upcoming pricing catalysts.

We are Buy rated on GH. Our 12-month price target of \$185 is based on 13x Q5-8 sales.

Key downside risks: 1) Market Competition: While Guardant remains the leader in blood based therapy selection and is expanding its portfolio of MRD tests, the company faces competition in several parts of their existing offering including tumor naive MRD, blood and tissue therapy selection, and early detection for CRC. 2) Clinical Data: Data often drives provider adoption, FDA approvals, and coverage decisions. Unfavorable results in clinical data could put downward pressure on future test adoption. 3) Regulatory: Several regulatory decisions could impact GH's business including FDA/CMS coverage decisions, further regulation of LDT's, and FDA approval for companion diagnostic targets. 4) ASP pressure: The CRUSH initiative has lead to an increased focus on pricing from molecular diagnostic companies that could bring up future legislation or commentary on bringing lower cost tests to patients. Additionally, any downward pressure from private payers could lead to a resetting of GH's ADLT rate lower than current levels driving down top line growth and lead to margin contraction.

Caris Life Sciences — Buy

For 2Q26, we expect top line growth of 32.9% with revenue/gross profit of \$241mn/\$158mn, compared to FactSet consensus of \$240mn/\$152mn.

Quarter

- **Guidance:** Management expects 2Q total revenue growth to be ~32%. Test volumes are expected to have a ~10% sequential step up from 1Q, which compares to management's previous expectations of 7%, leading to 2Q volumes expected to be >58,000 (~47,500 for tissue, ~10,500 for blood). Within the full year 2026 guidance, management expects total revenue growth of 23-26%, including molecular profiling revenue growth of 21-22%. From an ASP standpoint, management guided to Tissue ASP of \$4,200 and Blood ASP of \$2,400-\$2,500. Tissue test volumes are expected to grow low-teens while Blood test volumes are expected to grow high 50% / low 60%, resulting in total therapy selection volume growth of ~20%. Management also expects Pharma R&D Services revenue to be in a range of \$75mn-\$85mn and to be FCF / Adjusted EBITDA positive in 2026.
- **Key Debates:** Heading into 2Q, key debates for CAI centered around the ability to deliver post-1Q volume acceleration (and the durability of said acceleration) following the January sales force realignment, the timing and early commercial traction of Caris Detect, the implications of the company's New York State submission for Caris Assure, and the degree to which newly launched pipeline

products can begin to contribute without pressuring profitability. While 1Q volume growth came in below the company's full-year 20% clinical therapy selection volume growth framework, February/March run-rate suggests that the sales force realignment may have caused a temporary disruption in volume growth and investor focus is like to remain on volume growth into 2Q and the back half of the year. Management has indicated several potential volume levers, including continued ramping of the tissue sales force and the doubling of the specialized liquid sales team in 2Q. Further, we expect debate around the recently launched MCED Detect test to remain focused on three main ideas: launch cadence, commercialization mechanics, and margin impact. Finally, we will look for any incremental updates to CAI's submission to NY State approval for Assure as investors look to the event as a possible reaccelerant of blood volumes.

Our Thesis

- Caris Life Sciences' therapy selection and Pharma R&D services generate a self-sustaining revenue stream with positive free cash flow, providing the capital necessary to reinvest in its high-growth pipeline for multi-cancer early detection (MCED) and minimal residual disease (MRD). Following its June 2025 IPO, CAI has traded below its peer comp set which we believe provides an attractive entry point as the company continues to ramp tissue and blood volumes in addition to new product launches.

Model

- We update our model which reflects 2026/2027/2028 revenue and EPS of \$1.01bn/\$1.23bn/\$1.42bn and \$0.16/\$0.44/\$0.69 versus previous of \$1.01bn/\$1.24bn/\$1.48bn and \$0.16/\$0.45/\$0.72 to reflect updated sales assumptions. We maintain our target Q5-Q8 EV/Sales multiple of 6x and price target of \$27.

We are Buy rated on CAI. Our 12-month price target is \$27. Our valuation methodology uses a target 6x Q5-Q8 EV/Sales. Key downside risks include: 1) Competitive Risks as Caris faces material competition in the therapy selection space in addition to upcoming product launches through its MCED, MRD, and other assays, 2) Trial risk with potential execution in a broader population as its first MCED trial was case controlled. This risk can lead to decreased performance of its screening tests and therefore impact how it is perceived by the market, 3) Execution Risks in receiving FDA approval and therefore CMS reimbursement remains a risk for future tests, and CAI has multiple upcoming submissions and launches that could pose challenges in addition to growing its pipeline of new products, and 4) CAI's multi-channel approach to the MCED roll out (rather than a full sales force) could hinder the company's ability to penetrate the market.

Natera — Neutral

For 2Q26, we expect top line growth of 20.1% with revenue/gross profit of \$656mn/\$418mn, compared to FactSet consensus of \$661mn/\$427mn.

Quarter

- **Guidance:** Management expects 2Q Signatera volumes to grow in line with the trailing four quarters' average for the sequential growth units. NTRA also expects Women's Health to step down following the strongest quarter of the year in line with historical seasonality and Organ Health to grow in line with last quarters trends. For full year 2026, the company has guided to revenue in the range of \$2,740mn-\$2,820mn, and while this includes ASP improvement for Signatera, which is expected to exit 2026 at ~\$1,275, this does not contemplate additional coverage decisions which would represent upside to guidance.
- **Key Debates:** 1Q demonstrated strong momentum across the business and we believe the debate has shifted to the magnitude and timing of acceleration and the key levers to support continued growth, including incremental data readouts across tumor types, the impact the upcoming Japan CRC MRD Launch could have on growth, and potential MolDx coverage expansion across additional histologies, alongside continued reimbursement execution with both Medicare and private payers as pathways to both volume and ASP upside. Further, incremental adoption in additional indications such as bladder and broader guideline inclusion is expected to contribute to utilization as clinical evidence accumulates. Finally, we expect debate to continue to be focused on competitive dynamics and new product positioning, particularly in MRD and tumor-naïve testing, where Guardant remains the primary scaled competitor in blood with Reveal and introduces further competition with the upcoming launch of Reveal Ultra. We continue to view Natera's position as the tumor informed MRD leader and note Latitude should help drive share gain as a reflex when tissue is insufficient.

Our Thesis

- While NTRA is the leader in the Minimum Residual Disease (MRD) market with its Signatera platform, and we believe has several long-term growth prospects, as fueled by their organic reinvestment, we are watching for additional operating leverage benefits as the company scales their top line.

Model

- We model 2026/2027/2028 revenue and Gross Profit of \$2.81bn/\$3.36bn/\$3.97bn and \$1.82bn/\$2.20bn/\$2.63bn. Further, we updated the phasing of revenue to better reflect historic Signatera volume phasing. We raise our target Q5-Q8 EV/Sales multiple to 11x from 10x and price target to \$2700 from \$245 to reflect updated peer comps.

We are Neutral rated on NTRA. We value NTRA at 11x Q5-8 EV/Sales to arrive at a 12-month price target of \$270.

Upside risks include: Favorable Coverage Decisions: NTRA has submitted their application to MolDx for coverage of additional tumor types which could drive ASP expansion should they see favorable decisions. Commercial payer traction following additional TOMR Data: We believe a key gating factor for several large private payers to cover MRD testing is the view that MRD testing is investigational in nature. Should NTRA

see additional positive data points on using MRD to guide treatment decisions, private payers may start covering the test, further driving ASP improvement and profitability. Volume Growth: Volume growth above investor expectations, especially in core areas like MRD and Women's health, or newer tests including Latitude or upcoming launches, could drive share price performance.

Downside risks include: Competitive risks: Signatera faces material competition in the MRD market from other firms including GH. While Natera holds the leading share in MRD testing, new players have been entering the space with highly sensitive assays. Should these players start to gain an outsized level of share, it could hurt NTRA's future growth outlook for Signatera volumes. Unfavorable Pricing Dynamics: NTRA has faced downward pricing revisions on their Signatera ADLT rate in the past, future pricing headwinds could drive lower overall revenue growth and profitability impacts. Additionally, the CRUSH initiative has led to an increased focus on pricing from molecular diagnostic companies that could bring up future legislation or commentary on bringing lower cost tests to patients.

Grail — Neutral

For 2Q26, we expect top line growth of 21.1% with revenue of \$43.1mn, compared to FactSet consensus of \$42.8mn.

Quarter

- **Guidance:** Following 1Q Galleri sales growing 37%, GRAL reiterated its FY26 guide of 22% to 32% with cash burn of <\$300mn providing runway to 2030.
- **Key Debates:** Heading into 2Q, key debates for GRAL remain focused around the FDA PMA submission, which was submitted in January and the company expects to hear back on potential approval within 180 days without an Adcom or 320 days with an Adcom meeting. At our recent conference, management noted they have had active discussions with the FDA which have been constructive. Beyond the regulatory catalyst, the company has been focused on expanding their commercial footprint by ~30 territories, leveraging digital health partnerships like Function Health, Hims & Hers, and Whoop to help expand their customer reach, and Epic integration which is expected to go live in the second half of the year.

Our Thesis

- While GRAL maintains first mover advantage and has largely been successful in the self pay market for multi cancer early detection (MCED), we take a neutral stance on the name until we can have more conviction in variables such as the company's FDA PMA submission and CMS's view on utility in MCED tests broadly, both of which have significant implications on the company's growth and profitability moving forward.

Model

- We model 2026/2027/2028 revenue of \$178mn/\$219mn/\$269mn. We maintain our target Q5-Q8 EV/Sales multiple of 7x and price target of \$60.

We are Neutral rated on GRAL. Our 12-month price target is \$60. Our valuation methodology uses a target 7x Q5-Q8 EV/Sales.

Key Upside Risks Include: 1) FDA approval and CMS Reimbursement: The successful submission and acceptance of Grail's Premarket Approval (PMA) application in early 2026 could drive a potential FDA decision by late 2026 or early 2027. 2) Sales organization driving above average adoption: Grail's strategic expansion of its field sales force to 120 territories and the integration of Galleri into Epic's EHR platform could drive accelerating clinical adoption. 3) Improvement in assay development and data readouts: Future presentation of detailed, long-term data from clinical trials could provide the robust clinical utility evidence required to convince skeptical payers and providers.

Key Downside Risks Include: 1) Lack of FDA approval and CMS Reimbursement: If Galleri does not receive FDA approval there is a risk to regulatory approval and broad insurance coverage. If CMS determines that the clinical utility does not justify reimbursement, Grail may face prolonged delays for broad scale adoption from payers. 2) Single test exposure: Grail remains highly vulnerable to product-specific setbacks, as the Galleri test accounts for approximately 97% of the company's total revenue as of Q1 2026. 3) Competition entering the MCED market: The emergence of well-capitalized competitors in the liquid biopsy and MCED sectors may lead to increased pricing pressure and a fragmented market.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Financial advisory disclosure

Goldman Sachs and/or one of its affiliates is acting as a financial advisor in connection with an announced strategic matter involving the following company or one of its affiliates: Danaher Corporation.

Rating and pricing information

Agilent Technologies Inc. (Buy, \$134.29), Bruker Corp. (Sell, \$60.06), Caris Life Sciences Inc. (Buy, \$16.99), Danaher Corp. (Buy, \$199.05), Grail Inc. (Neutral, \$72.00), Guardant Health Inc. (Buy, \$160.05), Mettler-Toledo International Inc. (Neutral, \$1,296.17), Natera Inc. (Neutral, \$269.95), Revvity Inc. (Neutral, \$112.29), Sotera Health Co. (Buy, \$18.42), Thermo Fisher Scientific Inc. (Buy, \$527.05) and Waters Corp. (Buy, \$376.43).

The rating(s) for Agilent Technologies Inc., Bruker Corp., Caris Life Sciences Inc., Danaher Corp., Grail Inc., Guardant Health Inc., Mettler-Toledo International Inc., Natera Inc., Revvity Inc., Sotera Health Co., Thermo Fisher Scientific Inc. and Waters Corp. is/are relative to the other companies in its/their coverage universe: Agilent Technologies Inc., Bruker Corp., Caris Life Sciences Inc., Danaher Corp., Grail Inc., Guardant Health Inc., Mettler-Toledo International Inc., Natera Inc., Revvity Inc., Sotera Health Co., Thermo Fisher Scientific Inc., Waters Corp.

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	59%	43%

As of July 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,104 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking

Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or contatogoldmanbrasil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
