There’s vertical integration. There’s extreme vertical integration. And then there’s SpaceX. We struggle to think of any other company that exhibits similar levels of Dimensionality, Verticality, Flexibility and Speed.

Exhibit 1: DVFS: Dimensionality, Verticality, Flexibility, Speed

Please see here for our SpaceX Initiation: [SpaceX: AI’s Final Frontier; Initiate at Overweight, PT \\$300 \(7 Jul 2026\)](#)

Dimensionality. Breadth. Polymathic ability that spans a wide range of capability. Cohesion and surface area create ecosystem value. Example: Lowering cost of mass to orbit (\$/kg) unlocks opportunity in space based AI infrastructure. Or AI sats using Starlink sats as a comms relay back to earth.

Verticality. Depth. In-house expertise from upstream supply chain down to after sales/service. Example: Identifying the top impediment for time to power in terrestrial AI is the natural gas (CCGT) turbine. Identifying supply of vanes and blades as the key impediment. SpaceX to make their own vanes and blades.

Flexibility. Ability to learn and pivot from, especially from mistakes. Example: Gigawatt scale compute clusters can be sold in a neocloud model to 3rd party AI

labs with ability to shift to internal model training or end-to-end enterprise AI as Cursor scales.

Speed. Moving an order of magnitude faster than competitors (when needed). Example: Experience with local power/electric utility authorities at Tesla + in-house contractor capability enable SpaceX able to bring to market hundred-megawatt scale in 90 days - nearly 8x faster than industry benchmarks. We should mention that 'Speed' in our DVFS framework doesn't always mean *fastest*. Think of 'Speed' as the ability to toggle strategy and execution to the correct velocity at the right time. In some situations that may mean faster. In other situations that may mean slower. Matching velocity with mission *dynamically* is the key.

A note on vertical integration.

- 80% of Starship is made in-house
- SpaceX manufactures Starlink satellites and user terminals, builds much of its ground infrastructure, produces battery systems, and is expanding into in-house production of certain Starship propellants
- SpaceX's Bastrop, TX facility is the [largest](#) printed circuit board (PCB) manufacturing facility in the US
- SpaceX is expected to break ground on a foundry to make [vaness and blades](#) for nat gas turbines
- SpaceX is building an 11-million-square-foot "[Gigasat](#)" factory in Bastrop, Texas, to vertically integrate and mass-produce AI satellites, including solar cells, electronics, communications hardware and complete spacecraft targeting production equivalent to 1 GW of orbital AI compute annually by late 2027.
- SpaceX and Tesla are planning Terafab, an integrated semiconductor-manufacturing project expected to include chip fabrication, lithography, memory, packaging, and testing to produce 1TW of chips/year

When SpaceX builds a datacenter, they don't use general contractors - they do it all in-house - 8x faster construction time for a 100 MW-scale cluster than peers (90 days vs. 2 years). **Building big projects fast is actually a product for this company.**

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of June 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.
