

AMERICAS TECHNOLOGY: SOFTWARE

Revisiting Moats VI: The lag between AI spend and Security AI spend; and when to look for an inflection

In the last four months, the Security category has shifted from being viewed as at risk from AI to being a clear beneficiary, with the consensus view being: more AI spend means more Security spend, and this incremental Security budget is likely to largely accrue to today's platform leaders. We agree with this view; however, quantification and timing will matter to realizing alpha from here:

- 1. To date, we have yet to see a meaningful change in Security budgets for product. This creates a challenging set up into earnings because stocks have pre-traded a medium-term inflection.** Our industry discussions suggest that enterprise agentic implementations are still immature and often run in isolated "sandbox" environments. While many security teams have a "blank check" strategic mandate, these incremental dollars today are being spent on more niche product POCs and on patching and hygiene management, which are not directly monetized in scale by the product companies in our coverage.
- 2. The question then becomes: when will the publicly-traded security companies see a more meaningful inflection in fundamentals?** As a starting point, we take a look at the cloud cycle: it took 5 years for Security to inflect from <1% of cloud to spend to 2-5%, which we view as steady state. If we count 2025 as Y0 of initial enterprise inference use cases and reconcile with our industry conversations, **we expect an inflection in AI Security budgets may happen as soon as 4Q or 1H27, suggesting a 2-3 year lag. Our TAM math then supports a 2-3 pt boost to industry growth rates into 2028.** Put simply, the AI Adoption cycle is happening faster than prior technology adoption cycles. The key underlying driver to watch is enterprises moving inference and agentic workloads from trials to production use cases that are not limited by sandbox implementations, which in turn is a key focus of our industry conversations into 3Q.
- 3. New security budget likely disproportionately accrues to today's leaders:** The biggest risk in broader Software is that new AI value accrues to new entrants (AI natives, frontier models), rather than incumbents. This risk is lower in Security for two reasons: a) Security roadmaps are driven by machine learning (ML) innovation, not GenAI innovation; and this fundamental difference makes it hard

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

for new entrants to replicate the advantages of deep human re-enforcement learning feedback loops and labeled datasets; b) Security leaders are being aggressive in acquiring new technology assets from a richly-funded private company landscape (we estimate >\$2.3bn in the last 18 months).

4. **Product cycles to watch:** We expect the most discernible product cycles to be in a) next-gen AI detection and response for agentic runtime use cases (i.e. monitoring agents) and associated security operations center (SOC) infrastructure upgrades, where CRWD and PANW have outsized exposure; b) identity, where we think OKTA is best positioned given its cloud native back end and a renewed product cycle with Auth0 given outsized mindshare with developers; and c) select niche product cycles such as prompt engineering and data protection.
5. **Blue sky scenarios for PANW and CRWD suggest both can grow into their valuations; with OKTA having the most potential to inflect from lower absolute growth rates and valuation.** We are cognizant that Security stocks are expensive relative to their growth profile and history, and we now have modest upside to our revised price targets for PANW and CRWD. However, we also present blue-sky scenarios for PANW and CRWD that show the potential for CY28 FCF to be higher by as much as 30% vs. our estimates. In this illustrative scenario, PANW and CRWD would be trading at implied EV/FCF/growth multiples below that of the 20%+ software cohort today.

Exhibit 1: Key inflection points in the past six months have driven the Security sector higher at the same time as broader Software has derated

Source: FactSet, Data compiled by Goldman Sachs Global Investment Research

Exhibit 2: Platform leaders have driven a step function higher in Security sector valuations in the last 4 months

Source: FactSet, Data compiled by Goldman Sachs Global Investment Research

Exhibit 3: Security fundamentals have yet to inflect higher; look for improving lead indicators (e.g. bookings) into 2H25

The Cloud Security Cycle

Exhibit 4: Security Cloud revenue was de minimis into 4+ years of the IaaS ramp

Cloud security revenue as a % of hyperscaler IaaS revenue

Source: Gartner, Company data, Goldman Sachs Global Investment Research

Exhibit 5: Estimated Palo Alto virtual firewall mix inflected after FY18, reaching ~30% of product revenue by FY23 and 45%+ in FY26

Palo Alto virtual firewalls as a % of total product revenue

Source: Company data, Goldman Sachs Global Investment Research

We benchmark the beginning of the cloud security cycle to 2015: this is when Amazon first disclosed AWS metrics at \$4.6bn in 2014 revenue and 17% operating margin, in contrast to the consensus view that cloud was a low or negative margin business. Through 2016 and 2017, our industry conversations suggested that the cloud security ecosystem was uncharted and somewhat chaotic territory: there was a fair amount of confusion amongst CISOs as to how to secure cloud workloads, there were many new point products to consider, and the hyperscalers began to embed security functionality into their PaaS offerings as a means of differentiation. In early cloud years, we believe many CISOs simply routed traffic back to their existing firewall DMZ to apply security policies, with minimal new demand for cloud-specific security products. Early cloud workloads also tended to be customer facing, which generally required less security than internal facing workloads (e.g. content streaming from Netflix and eCommerce websites did not require complex network and endpoint tooling).

There were milestones in 2016, 2017, and 2018 that illustrated a maturation in the Cloud Security Market. Several market dynamics began to converge: CISOs had a better understanding of what security building blocks were needed in the cloud, point products began to mature in the quality of their offerings to justify incremental spend beyond hyperscaler security, customers began to consider more regulated and sensitive workloads in the cloud, and multicloud architectures became more common. In parallel:

- Gartner first published its Cloud Security Market Guide in 2016
- Gartner first published its Cloud Access Security Broker (CASB) Magic Quadrant in late 2017. CASBs delivered a layer of security between enterprise users and SaaS hosted applications like Salesforce.
- **2018 was the first big year of Security Cloud M&A**, with Palo Alto acquiring Evident.io for ~\$200mn and RedLock for \$173mn, and Check Point acquiring Dome9 for \$175mn. In 2019, Palo Alto acquired Twistlock for \$410M, PureSec for \$47M and Aporeto for \$150M in 2019. There was also roughly \$1.3B of M&A before cloud security became a major standalone revenue category.

We view 2020 as the first year when security spending inflected; we estimate from 1.3% to 2.9% based on Gartner cloud disclosures on cloud security category revenue as a percentage of IaaS revenue, as defined by aggregating AWS / Azure / GCP IaaS revenue. COVID was likely a catalyst, as employees essentially went to 100% virtual access over a short period of time in March/April 2020. We consider both Cloud Security Posture Management and Cloud Workload Protection Platforms Gartner disclosures.

- Wiz scaled from \$1mn ARR in early 2021 to ~\$100mn ARR by mid-2022 and ~\$250mn ARR by early 2024;
- PANW disclosed Prisma Cloud ARR of >\$200mn in 2021, >\$500mn in 2023 and >\$700mn in 2024
- CRWD disclosed Falcon Cloud Security ARR of >\$400mn in FY24 and >\$600mn in FY25.

We arrive at two key observations: It took 5 years from the beginning of the IaaS cloud cycle to realize a meaningful inflection in Cloud Security revenue; and 2-5% is a reasonable benchmark for Security budgets as a % of IaaS budgets.

The AI Security Cycle

Exhibit 6: We estimate a ~\$20bn Security AI TAM in 2031 based on the Cloud Security attach rate and a rough forecast for IaaS inference revenue

Security TAM - Base vs. AI

Source: Goldman Sachs Global Investment Research, Gartner

Exhibit 7: AI likely drives a 3pt boost to Security TAM growth rates in the next ~12-24 months

Estimated boost to Security TAM growth rates from AI

Source: Goldman Sachs Global Investment Research

We benchmark the beginning of the AI enterprise cycle to 2025. This is when our industry conversations suggested a) a more meaningful shift between AI training and AI inference workloads in the enterprise; and b) more trials in agentic applications (link to last year's agent report). Based on our conversations, AI training workloads are mostly internal facing and require minimal amounts of incremental security spend, with the exception of new select sovereign data centers. In contrast, inference workloads need to be embedded in enterprise systems to be useful, and thus require a robust level of security as they move from proof of concept and sandboxing into full production.

To date, AI disclosures from the security companies have been early and mostly directional:

- **Palo Alto:** Prisma AIRS is Palo Alto's AI segment, which includes runtime threat defense, model vulnerability scanning, security posture management and red teaming tolls across AI applications and models. AIRS has 300+ customers and is approaching \$100M ARR. In our 2Q conversations, Palo Alto noted that Prisma AIRS has reached 8-10% of total AI spend in some customer scenarios, suggesting higher attach rates are possible than our baseline 2-5% assumption.
- **CrowdStrike:** CrowdStrike's AIDR (AI detection and response) ARR grew 250%+ sequentially in the April quarter (1QFY27), with a \$50M+ pipeline. AIDR represents the company's AI security suite across model, data and agentic security, with recent acquisitions Pangea and SGNL extending coverage into AI applications and agentic identity.
- **Zscaler:** AI Protect generated \$100M+ of bookings over the past year. This segment includes Zscaler's AI security products across AI app protection, model / data security and AI-SPM, including discovery of LLMs, workflows and MCP servers. Zscaler launched its AI broker at its Zenith conference in June; this product secures agentic communications across MCP and agent-to-agent workflows, with policy

controls around what each agent can access.

- **Fortinet:** Fortinet has yet to disclose a standalone AI security number and generally leans toward more organic development vs. M&A. In its March quarter, Fortinet noted improving data center AI demand for firewalls and internal segmentation firewalls, in part driven by sovereign programs in the Middle East.
- **Check Point:** Check Point has not disclosed a standalone AI security number; management has said AI security revenues are still not significant but the funnel has grown materially. Check Point's AI security push is built around Lakera, which provides runtime protection for AI applications and agents, including defenses against prompt injection, data leakage and model manipulation. Check Point is also building AI security into its broader platform through employee AI usage controls, AI factory/NVIDIA infrastructure security and Infinity AI Copilot.
- **Okta:** New products were ~25% of bookings in 1Q, up meaningfully yoy, with ~40% ACV uplift when included in deals. AI products include Auth0 for AI Agents and Okta for AI Agents, which secure and govern AI agents across the full lifecycle, including access to third-party MCP servers and discovery/control of agent sprawl. These specific products are still small relative to total revenue, early customer traction and pipeline is strong, and AI-agent deal sizes are larger than average.
- **SailPoint:** SailPoint expects AI ARR to exceed \$100mn by the end of FY27. SailPoint defines AI ARR as Agentic Fabric, Agentic Suites and agentic add-on modules, with the core product focused on governing AI agents, nonhuman identities and the access those agents have to applications and data. Nonhuman identities drove 40% of identity growth last quarter and 20% of net new ARR came from emerging products inclusive of AI, suggesting agentic identity is becoming a more visible growth driver.
- **SentinelOne:** In our June meeting, SentinelOne acknowledged that recent AI model headlines are driving more attention to AI security conversations, but it has yet to see a material departure from steady-state spending patterns. Prompt Security is seeing the clearest AI pull-through, followed by agentic SoC and cloud runtime. Most notably, Prompt has moved from ~0% to ~20% of pipeline in a matter of weeks and ARR has close to doubled in each of the past two quarters (4Q and 1Q). S is also having more conversations around its data business for the agentic SoC as customers increasingly want a flexible approach.

In terms of actual AI security adoption, it is much clearer to us now why we have not yet seen a meaningful AI tailwind to public security companies. We spoke to many security practitioners in 2Q who told us that agentic implementations are still largely running in sandboxes, or isolated environments that are temporarily spun up and down. We also believe part of the disconnect between broader agentic AI adoption data and limited traction for security vendors is that some of this activity is happening on unmanaged and/or personal devices, where enterprise security vendors have less visibility today.

Bridging to our AI security forecast:

- Using company disclosures with a few rough assumptions on share between public

and private vendors, we estimate about \$100–200mn in AI security revenue in 2025. We then calculate a bottom up build of AI IaaS revenue based on estimates/disclosures from Microsoft, Amazon, CoreWeave and Oracle, and we assume these disclosures together are about two thirds of the AI TAM in 2025 (with the largest undisclosed contribution from Google). We estimate that the mix between inference and training workloads in 2025 was roughly 50/50, growing to 75% this year and stabilizing at 85% of mix in the next two years.

- We then forecast Security AI revenue as an attach rate on IaaS AI inference revenue. We start with our 2025 estimate of ~\$100mn Security AI revenue over an AI IaaS inference TAM of \$17bn, implying 0.6% attach rate. We then use the cloud security inflection as precedent, mapping 2019 and 2020 (Y4 and Y5 of the cloud cycle) to 2027E and 2028E (Y2 and Y3 of the AI cycle).

We arrive at a ~\$20bn AI Security TAM in 2031, implying a 2 pt boost to industry growth rates. We view this initial forecast as conservative given the potential for AI security to drive more value than cloud security; at a 7% attach rate, our forecast would double to \$40bn and a 4 pt boost to industry growth rates. Palo Alto has commented that its Prisma AIRS product can comprise as much as 8–10% of customer AI spend.

Why new AI security budget disproportionately accrues to today's platforms

The biggest risk in Software is that new AI value accrues to new entrants (AI natives, frontier models), rather than incumbents. This risk is much lower in Security for two reasons: 1) Security roadmaps are driven by ML innovation, not GenAI innovation; and this fundamental difference makes it hard to replicate the advantages of deep human reinforcement learning feedback loops and labeled datasets; 2) Security leaders are aggressive in acquiring new technology assets from a richly-funded private company landscape.

1. Security roadmaps are driven by ML innovation, not GenAI innovation.

We believe there is a structural difference in the type of AI that drives Security roadmaps vs. the type of AI that is driving frontier lab roadmaps that creates two distinct swim lanes that will likely not cross. Security companies have discussed Machine Learning (ML) as being the cornerstone of their R&D roadmaps for 10+ years. These machine learning roadmaps are specifically trained on proprietary annotated datasets with human reinforcement feedback loops, and with outputs that are deterministic. These datasets in turn have been built and maintained by proprietary data collection from control points at the network layer or endpoint layer that cannot be replicated by synthetic data to the best of our knowledge. In some cases, proprietary data collection happens via human assets using very deep tradecraft. In our meeting with Adam Meyers, SVP of Counter Intelligence at CrowdStrike on April 7, Mr. Meyers noted CrowdStrike's internal runway of AI innovation and the frontier lab runway of AI innovation as independent. This dynamic further reinforces our view that a security vendor leveraging AI on its specialized data and then applying it to unique customer data should be able to deliver better and cheaper outcomes to customers, irrespective of where the performance of general purpose LLMs go over time.

In contrast, frontier lab roadmaps are driven by generative AI. There is still opportunity to drive better security outcomes using generative AI, but we view the use cases as different. One of the most successful GenAI use cases to date has been in coding — as more code is generated, the focus shifts to how to make that code more secure. Importantly, improving security at the very first step of writing / building an application may meaningfully reduce the potential for vulnerabilities to be exploited once the app is in production. We expect over time the LLM providers will focus on two runways: i) providing a base level of security within their product that limits any friction to adoption (similar to Microsoft with E5 security capabilities and AWS with inbuilt cloud security controls), ii) security use cases that could be solved with very strong anomaly detection engines and in spite of limited security specific domain experience. While LLMs may likely not build comprehensive endpoint, network, or SOC products; the same anomaly detection capabilities used for code security could theoretically extend into adjacent domains such as user behavior analytics, network traffic analysis, or SOC investigations. In the short term, we expect to see pressure in the code security and pen testing categories. In the medium term, we expect Security vendors partnering with LLMs will also impact categories within the Security Operations Center (such as SOAR and NDR).

2. Security leaders turn disruption risk into disruption opportunity via M&A

One of the main challenges in security is that technology is going up against active adversaries that are looking to undermine the parameters on which the products are built. This leads to the R&D process being more revolutionary than evolutionary — companies can't simply make the next version of their product faster and better and expect it to be successful, as the threat vectors evolve too quickly. In our view, one of the more successful ways of compounding a competitive moat is therefore via M&A, and specifically acquiring next-gen security companies that are early on in their growth. This allows the acquirer to more easily integrate the technology stack and team, and benefit from the revenue synergies of selling the new product across its existing installed base via its scaled go-to-market motion.

This M&A playbook is being executed real time, and at a faster pace than in the cloud security cycle (Exhibit 8). IaaS had already been scaling for several years before the cloud-security M&A wave. If we use 2015 as the start of the more meaningful IaaS ramp, the acquisition wave came four to five years later. Wiz, which became the largest independent cloud-security winner, was not founded until 2020. Palo Alto has made the cloud comparison directly, but the starting point is different. In 2018/2019, the company was using M&A to build out cloud security and shift the portfolio away from on-prem. In AI, Palo Alto already has many of the relevant control points across network, endpoint, cloud, browser, and identity. The issue is extending those controls into AI agents and infrastructure, which should be a more natural extension than the original cloud transition. The risk is that platforms make big bets ahead of an architectural shift than then favors an alternative approach; platforms can in turn counter this risk by driving strategic decisions that favor their respective approaches by leveraging their existing C-level relationships.

Exhibit 8: AI security M&A is happening earlier in the AI cycle than in the cloud cycle

Acquirer	Target	Price	Date Announced	Description
Palo Alto Networks (PANW)	Protect AI	~\$500M	28-Apr-25	Secures AI models, applications, and agents across development and production environments
	Koi Security	~\$400M	17-Feb-26	Provides Agentic Endpoint Security to protect organizations against the risks of unmanaged AI tools, browser extensions, and developer software
	Portkey	~\$140M	30-Apr-26	AI gateway that helps developers build, manage, connect, and secure generative AI applications and autonomous agents
CrowdStrike (CRWD)	Pangea	~\$260M	16-Sep-25	Protects AI applications from prompt injection, data leakage, and unsafe AI interactions.
	SGNL	~\$740M	8-Jan-26	Continuous identity and dynamic authorization platform for replacing static permissions with real-time access enforcement for humans, machines, and AI agents
SentinelOne (S)	Prompt Security	~\$250M	5-Aug-25	Secures enterprise GenAI usage through prompt monitoring, data loss prevention, and governance.
Check Point (CHKP)	Lakera	~\$300M	16-Sep-25	Protects AI applications against prompt attacks, jailbreaks, and malicious inputs.

Blue sky scenarios

CrowdStrike

We consider a scenario where CrowdStrike's core business modestly beats the Street (consistent with prior year actuals vs. original guidance) and then layer in assumptions for AI market share on our AI security TAM estimate. We assume CrowdStrike's share of the AI TAM is 3x higher than its share of the total security TAM, given its pace of innovation organically and success with M&A.

Exhibit 9: In our Blue Sky scenario, FCF estimates for FY29 (ending January 2029) could be revised up by as much as 30%

FY ends January	FY26A	FY27E	FY28E	FY29E
Base Case (GSe)				
Revenue	4,812	5,960	7,352	8,937
% yoy	21.7%	23.9%	23.4%	21.6%

Palo Alto Networks

We consider a scenario where CrowdStrike's core business modestly beats the Street (consistent with prior year actuals vs. original guidance) and then layer in assumptions for AI market share on our AI security TAM estimate. We assume Palo Alto's share of the AI TAM is 2x higher than its share of the total security TAM, given its pace of organic innovation and success with M&A, partly offset by its larger scale today vs. CrowdStrike. Taken together, our Blue Sky scenarios assume Palo Alto and CrowdStrike together capture about one third of the new AI security TAM.

Exhibit 10: In our Blue Sky scenario, PANW CY28 FCF estimates could also be revised higher by as much as 30%

Aligned to approximate calendar years	CY25A	CY26E	CY27E	CY28E

Valuation and Risks

CrowdStrike (CRWD): We raise our 12-month price target to \$208 (from \$182, adjusted for the recent 4 to 1 stock split), based on 75x EV/FCF our 5Q-8Q estimates (vs. 65x previously) with the higher multiple based on our updated work on blue sky potential into FY27. Key risks: quickly evolving AI tech landscape, ability to expand consistently into new markets, competition in endpoint as the EDR category matures.

Palo Alto Networks (PANW): We raise our 12-month price target to \$371 (up from \$330), based on 45x our Q5-Q8 FCF estimates (40x previously) with the higher multiple based on our updated on blue sky potential into CY27. Key risks: competition in cloud, competition in SASE, integration risk in next gen technology.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an

officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data

feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
