

Commodity Market Positioning & Flows

The OI finds a floor after six weeks of declines

- The estimated value of open interest across tracked commodity markets increased marginally to \$1.7 trillion as of Jul 3 (Table 2, Figure 2). Across all trader types, contract-based outflows totalled \$13 billion WoW across all sectors, concentrated in crude oil market, which was largely offset by higher petroleum products, natural gas and precious metals prices over the week. This marks the first increase in the estimated OI value since its recent peak in mid-May, when the markets started to price in the reopening of the Strait of Hormuz. On the macro front, our economists continue to see a tightening labor market, alongside solid growth and sticky inflation, as the catalyst that pushes Fed policy rates higher ([Global Data Watch: Which supply side are you on?](#), Kasman et al, 2 July 2026).
- The estimated value of net investor positioning aggregated across global commodity futures markets decreased by 5% WoW (-\$9 billion WoW) to \$169 billion as of the latest data available (Table 1, Figure 3, Figure 4). The decline was largely driven by the energy and agricultural markets. Net length in energy markets declined by \$7 billion WoW, primarily driven by the decline across ICE Brent, where net length decreased from \$35 billion to \$30 billion over the week, followed by a \$1.7 billion net shortening in TTF natural gas to \$7.1 billion. Net length in agricultural markets declined by \$2.3 billion WoW, driven by declines across soy (-\$2.3 billion) and livestock markets (-\$1.3 billion), though partially offset by increases across coffee (+\$0.8 billion) and sugar (+\$0.5 billion) markets. Net length in precious metals increased by \$4 billion WoW, led by gold (\$3.5 billion WoW) and silver (\$0.8 billion WoW), while net length in base metals decreased by \$4.2 billion WoW, driven by copper and aluminum. JPM QDS's latest projections, as of July 6, indicate that positioning across commodity markets is set to increase by \$13 billion, largely driven by further lengthening in gold (+\$6 billion WoW), corn (+\$2.3 billion WoW), soy (+\$3.8 billion WoW), and coffee markets (+\$1.6 billion WoW).
- The Global Commodities Inventory Monitor (GCIM) declined by 1% in June to 69 days-of-use. On an ex-China basis—which is a proxy for globally tradeable inventories—the monitor also declined by 2% in June to 58 days-of-use. The decline was largely driven by an estimated c. 100mn bbl decline in global oil inventories in June (c. 62mn bbl in China). This was further accelerated by declines in copper and aluminium inventories, partially offset by rising US natural gas availability in line with seasonal trends. Stripping out the seasonal impact of US natural gas storage, GCIM through June declined by 2% to 73 days-of-use. Ex-China commodity availability (ex. US natural gas) also declined by 2% in June to 64 days-of-use.
- The estimated value of open interest in energy markets decreased by 1% WoW (-\$4 billion WoW) to \$718 billion (3 Jul, Figure 6). This was driven by net contract-based outflows of \$12 billion out of the crude oil markets, though partially offset by net contract-based inflows of \$4 billion into the petroleum products markets and a 7% increase in the ICE Gasoil price WoW. We note a surge in stranded oil which is re-entering the system, risking a temporary glut as demand (especially from China) remains subdued. [The market's recovery](#)

hinges on two key variables—whether China resumes buying oil and how quickly global inventories are replenished. Our base case remains that China will ultimately return to the market and we estimate China's oil demand to decline by 600 kbd in 2026, before rebounding by 800 kbd in 2027. The estimated value of open interest in natural gas markets increased by 1% over the week to \$170 billion (3 Jul, Figure 13). This was driven by an increase in prices across European and Asian benchmarks which more than offset the net contract-based outflows of \$2.6 billion. We note that Qatar Energy continues broadly stable operations and, at its current observed pace and assuming the Strait remains open, we estimate it will reach its normalized full capacity (i.e., excluding the two damaged trains) in August, broadly in line with our existing forecasts.

- The estimated value of open interest in precious metals markets increased by 3% WoW (\$7 billion) to \$250 billion, rebounding from the lows of the previous week (3 Jul, Figure 8). Across all trader types, the sector saw strong net contract-based inflows totalling \$2 billion WoW, primarily into gold (\$2.5 billion WoW), though it was slightly offset by outflows from silver (\$0.3 billion WoW). Meanwhile, net Managed Money positioning in COMEX Gold futures increased by 4.7k contracts to a total of 120k contracts net long. Amid a drop in buying intensity from other demand sectors for now, rate-sensitive ETF flows have regained marginal pricing power in gold, cementing a re-correlation between gold prices and real yields. While we ultimately think the Fed will end up remaining more patient this year, warding off sustained further significant downside for gold from current levels and allowing for a recovery higher over 2H26, reduced demand forecasts point towards an overall more range-bound base case gold outlook in the near-term with prices averaging \$4,300/oz in 3Q26 and \$4,500/oz in 4Q26.
- The estimated value of open interest in base metals markets remained flat WoW at around \$212 billion (3 Jul, Figure 9). The sector saw net contract-based outflows across all trader types reaching \$0.6 billion WoW, as the outflows from aluminium and nickel (-\$2.6 billion WoW) were largely offset by inflows into lead and zinc, while net flows in copper were broadly muted. In China, copper inventories have been cumulatively drawn 82 kmt in the last 3 weeks. These significant reductions have reduced China's total copper inventory to multi-year lows for this time of year at 163kt. We interpret this as a signal of improved China copper consumption, synchronous with the US continuing to pull metal to COMEX, ahead of the US Department of Commerce decision on whether to impose US copper import tariffs.
- The estimated value of open interest across environmental markets decreased by 3% WoW (-\$2 billion) to \$74.5 billion WoW (3 July, Figure 7). This was driven by net contract-based outflows of \$3.3 billion, primarily out of the EUA market as the June contract expired, partially offset by a 1.5% increase in the EUA prices. Investment Funds increased their net long position across EUAs as of 26 June to 62,116 lots, up by 3,327 lots WoW.
- The estimated value of open interest in agricultural markets remained largely unchanged over the week at \$368 billion (3 July, Figure 10, Figure 14), as the impact of net contract-based outflows of \$2 billion, primarily out of corn and soybean/soymeal markets, and a decline in prices across the livestock markets, was largely offset by an increase in prices across the coffee and cotton markets. See *Agricultural Commodities CFTC COT Report* for relevant supplemental data across agricultural markets.
- Price momentum increased across the agricultural markets, while it was largely mixed in energy and metals markets (3 July, Figure 17, Figure 18). Both long and short-term price momentum trading signals on CBOT Wheat and the short-term signal on sugar all switched positive to a 'buy' signal during the week, while the long-term price momentum trading signal on soybean switched negative to a 'sell'. Meanwhile, gasoline momentum trading signal breached its positive threshold, indicating potential exhaustion in the buying trend.

Price momentum and trading signals

Figure 17: Price momentum (z-scores) and trading signals across major commodities

*see methodology in Figure 18

Source: Bloomberg Finance L.P., J.P. Morgan Commodities Research, as of July 3, 2026

When the z-score (indicator of momentum) reaches 0, known as the switch point, it often triggers a change in signal from buy-to-sell, or sell-to-buy received by stochastic price/trend following trading models. This can drive heightened price volatility in the underlying commodity price when there is a large presence of CTA/trend-following trading models. When momentum reaches extreme levels, either maximum positive or maximum negative, a neutral signal is often sent, to stop or slow buying or selling. This often drives profit taking or an exit of positions.

Framework developed by J.P. Morgan Global Markets Strategy ([Flows & Liquidity](#), Panigirtzoglou, Inkinen et al, 1 July 2026)

Figure 18: Price momentum across commodity markets and trading signals

Optimal lookback period of each momentum strategy combined with a mean reversion indicator that turns signal neutral when momentum z-score exceeds the extreme momentum threshold, and a filter that turns neutral when the z-score is low (below 0.05 and above -0.05) to avoid excessive trading. Lookbacks, current signals and z-scores are shown for shorter-term and longer-term momentum separately, along with performance of a combined signal. Annualised return, volatility and information ratio of the signal; current signal; and z-score of the current return over the relevant lookback period; data from 1999 onward.

Market	Lookback duration	Lookback sessions	z-score 03/07/26	Extreme threshold	Current signal	z-score 26/06/26	Sessions since last signal switch	Information ratio	% change of return index from its MA
ICE Brent	Long	504	0.59	+/-2	1	0.64	21	0.52	17.2%

Disclosures

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Company-Specific Disclosures: Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan-covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution, or use of the information contained herein (including any reliance thereon) is STRICTLY PROHIBITED. Although this transmission and any attachments are believed to be free of any virus or other defect that might affect any computer system into which it is received and opened, it is the responsibility of the recipient to ensure that it is virus free and no responsibility is accepted by JPMorgan Chase & Co., its subsidiaries and affiliates, as applicable, for any loss or damage arising in any way from its use. If you received this transmission in error, please immediately contact the sender and destroy the material in its entirety, whether in electronic or hard copy format.
