

Internet/e-Commerce

Raising Internet capex ests: A look into Internet capex, capacity and monetization

Industry Overview

AI capex returns remain the top hyperscaler debate

The biggest debate for the Internet hyperscaler stocks remains the return profile on AI capex spend, while biggest concern in 2Q results is that higher capex (and lower FCF ests.) will overshadow strong revs. In our view, this concern has outweighed recent positive cloud pricing (Amazon) and capacity monetization data points. In this report, we raise our capex estimates, translate capex into estimated data center GW capacity, and review monetization estimates on that capacity. We also conduct an internet hyperscaler valuation analysis & list potential catalysts that could improve hyperscaler sentiment.

Raising capex estimates as hyperscalers prioritize capacity

Given the recent capital raise by Alphabet, reported server order increases by Amazon, LLM capacity use comments from Meta, and higher memory costs, we are raising our sector capex estimates. For Alphabet, we now expect Capex of \$195bn in 2026 (vs \$187bn previously), \$290bn in 2027 (vs \$257bn). For Meta, we expect Capex of \$145bn in 2026 (vs \$130bn previously) and \$185bn in 2027 (vs \$157bn). For Amazon AWS (excludes retail), we expect Capex of \$159bn in 2026 (unchanged), \$230bn in 2027 (vs \$196bn). (We will adjust our ests for related revenues & depreciation as additional June advertising and Cloud data points come in.)

Sizing hyperscaler data center GW capacity through 2030

We est. capacity by triangulating capex results and outlooks, Amazon's GW disclosures, and industry estimates on costs to build data center capacity. We estimate the Big-3 Internet mega caps had ~27GW capacity exiting 2025, which will grow to 39GW in 2026 and 57GW in 2027. We estimate Amazon will add the most capacity in 2026-2027 at 15GW, followed by Google at 9GW and Meta at ~6GW, with Amazon's capacity additions at a lower cost than peers (at around \$24bn in AWS capex per GW per 2025 disclosures).

Recent capacity deals suggest growing capacity value

Assuming 70% of Amazon's AWS capacity is used for Cloud (vs 30% for core), we estimate AWS revenue per GW of capacity at \$10.6bn in 2026, with Google Cloud at \$15.7bn. These revenues/GW are well below recent capacity deals by Anthropic and Google with SpaceX at up to \$50bn per GW (for specialized AI capacity), which give us optimism on future capacity related revenue upside. For Meta, we estimate the company could have up to ~23GW of capacity by 2030, and if 40% is available for AI enterprise sales, we estimate a \$110bn potential enterprise opportunity (assuming \$12bn/GW).

Internet hyperscaler valuation analysis

For our valuation analysis, we back out est. valuations for core advertising and retail revenues (at 12-15x implied P/Es) and look at valuations imbedded in hyperscaler stocks per unit of GW capacity. While our analysis is subject to numerous assumptions & excludes the impact of projects like Leo and Reality Labs., we think our analysis identifies the limited implied value the Street is giving to Meta's capacity build. Our analysis suggests an implied value for Google at \$110bn per 2028 Cloud GW (assuming 70% of capacity for Cloud), Amazon at \$59bn per AWS GW, and Meta at \$4bn per AI GW. We note that Meta is the major beneficiary with proof points on capacity revenue levers. See our other conclusions on the next page.

BofA Securities does and seeks to do business with issuers covered in its research reports. AI: Artificial Intelligence

FCF: Free Cash Flow

GW: Gigawatt

API: Application Programming Interface

MTIA: Meta Training and Inference Accelerator

TAM: Total Addressable Market

LLM: Large Language Model

Introduction

We think the biggest debate for the Internet hyperscaler stocks, in our view, remains the return profile on AI capex spend. The elevated capex spend has increased hyperscalers fixed costs, lowered competitive differentiation and increased long-term margin risk. While risk of incremental near-term FCF pressure is increasing, there have been recent positive cloud pricing (Amazon), capacity leasing (Anthropic deal with SpaceX) and LLM data points (Meta improvements with Watermelon) that suggest strong monetization potential. However, despite strong and accelerating Cloud sector revenue growth, Amazon and Meta P/E valuations are well below historical averages, and Google has underperformed since announcing a capital raise on June 3rd, suggesting investors remain skeptical on AI capex spend ROIs.

In this report, we update our capex estimates, translate capex into implied installed GW data center capacity, and estimate the potential monetization value of that capacity through a revenue-per-GW analysis. We also analyze for Internet hyperscaler capacity, and potential catalysts that could drive stock multiple expansion.

Our key conclusions:

- Amazon will add most capacity in 2026-2027 and therefore has potential for most capacity driven incremental revenue growth in the group. We estimate Amazon will add 15GW of capacity over the 2-year period, followed by Google at 9GW and Meta at ~6GW. Reiterate Buy on Amazon.
- We estimate that Amazon will have the lowest cost per incremental GW of capacity. We estimate Amazon capacity additions at \$25bn/GW in 2026 vs Google at \$37bn/GW and Meta at \$45bn/GW, which reflects AWS's scale advantage, use of internal chips, and more balanced mix of core cloud workloads (vs AI). Higher costs at Google and Meta in 2026 partially reflect additional upfront facilities spend (vs chips), more specialized AI capacity (GPUs vs CPUs).
- Google has higher revenue per GW of estimated AI / Cloud capacity, which is due to its premium cloud mix and differentiated AI infrastructure anchored by TPUs. However, with estimated 2026 AWS revenue per AWS GW at roughly \$10bn versus Alphabet Cloud at \$16bn, there is potential upside to our AWS revenue estimates as AI workloads grow as a percent of total.
- There is significant upside potential to our Cloud revenue estimates based on recent capacity deals. We estimate annual Cloud revenues per GW of capacity for Amazon and Google ranging from \$10bn to \$17bn, well below recent capacity deals signed by Anthropic and Google with SpaceX at over \$40bn a GW (estimated). We also use a conservative \$12bn per GW in estimating Meta's enterprise revenue potential, which could have significant upside considering specialized AI capacity that Meta is building.
- Meta is getting little to negative value on its capacity build. Even using a conservative 5x 2027 revenues on Meta's ads business (which translates to around 12x P/E assuming 50% margins) and assuming a relatively high 60% of capacity will be used for the core ad business, Meta's stock valuation embeds a \$4bn/GW AI capacity valuation based on our capacity estimates. Reiterate Buy on Meta.

Section 1: Raising Capex Estimates

Given the recent capital raises by Alphabet and Amazon, combined with a DigiTimes report that AWS has asked server supply chain partners to increase 3Q'26 shipments, comments from Meta's management on increase capacity needs for its new LLM (Watermelon), Google's commentary emphasizing a significant step-up in capex next year, and DRAM spot pricing data that suggests pricing is up 40% q/q, we are raising our capex estimates. We believe hyperscalers will prioritize capacity availability over near-term FCF optimization, as demand for AI training, inference, cloud workloads and internal AI product deployment remains supply constrained. Recent commentary supporting our outlook for higher capex:

- In June Google indicated plans to raise \$80 in capital to fund infrastructure investment,
- In early July, Meta said its next-gen AI model 'Watermelon' uses 10x more compute,
- In early July, Amazon Web Services has told its server supply chain partners to raise shipment volumes for 3Q'26 (per Digitimes), and
- In mid-June, per Bloomberg, Meta signed a 1.6GW capacity agreement with neo cloud provider, Crusoe

Exhibit 1: We are raising our capex estimates to reflect recent Cloud industry data points

Updated Capex Estimates for Alphabet, Meta and Amazon AWS (\$ bn)

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Revised estimates:

- **Alphabet:** We now expect Capex of \$195bn in 2026 (vs \$187bn previously), growing 49% y/y to \$290bn in 2027 (vs \$257bn previously) and 14% y/y in 2028 to \$330bn (vs \$310bn previously).
- **Meta:** We now expect Capex of \$145bn in 2026 (vs \$130bn previously), growing 28% y/y to \$185bn in 2027 (vs \$157bn previously) and 14% y/y in 2028 to \$210bn (vs \$171bn previously).
- **Amazon AWS:** We expect Capex of \$159bn in 2026 (unchanged), growing 44% y/y to \$230bn in 2027 (vs \$196bn previously) and 20% y/y in 2028 to \$276bn (vs \$221bn previously).

Note: Our updated Alphabet, Amazon and Meta models just reflect revisions to our capex estimates only. We will incorporate the associated impact on depreciation, EPS, FCF and other financial metrics as we receive June revenue data points.

Section 2: Estimating installed GW Capacity

Using our capex estimates, we estimate historical and future installed GW data center capacity for Alphabet, Meta and Amazon AWS. Our analysis uses company-level capex as the starting point, then applies an estimated cost to build and equip AI-oriented data center capacity. While the exercise is high-level given limited company-level disclosures, we believe it helps in sizing the scale of hyperscaler infrastructure deployment and the potential monetizable compute base. **Our key assumptions include:**

Cost to Build a GW of Capacity

We estimate that in 2026, the cost to build 1GW of data center capacity is \$25bn to \$45bn, inclusive of the major infrastructure and compute components. The range reflects differences in accelerator mix, rack density, power redundancy, cooling architecture, land and construction costs, and whether the capacity is optimized for training, inference or mixed workloads. We think capex cost per GW could be elevated for Meta and Google in 2026 as land and construction costs are elevated ahead of chip deployment, and capacity is more specialized for AI workloads than various Cloud competitors. Future offsets could include improving chip performance, use of proprietary chips, and rapid growth in memory and other supply availability.

Using data from multiple secondary sources, we estimate that the largest component of AI data center build cost is AI servers and GPUs, which account for roughly 55% to 60% of total cost. This reflects the high cost of accelerators, server systems and related compute hardware required to support training and inference workloads. Power infrastructure is the next largest cost category at approximately 12% to 18%, including substations, transformers, switchgear, backup generation and power distribution equipment needed to support dense AI workloads. Networking represents another 8% to 12% of total cost, driven by high-performance interconnects, switches and optical networking required to link large GPU or TPU clusters. Beyond compute and power, we estimate building, land and site work account for roughly 8% to 12% of total cost, including land acquisition, shell construction, site preparation and related civil work. Cooling and mechanical systems represent approximately 6% to 10%, and other costs and contingency account for ~3% to 5%.

Exhibit 2: We estimate \$25bn to \$45bn to build 1GW of AI data center capacity

Cost Build-up of 1GW Capacity Data center (\$ bn)

Capex bucket	Approx. % of total	Lower (\$ bn)	Higher (\$ bn)	What it includes
AI servers / GPUs	55%-60%	\$14	\$28	GPU servers, CPUs, memory, storage inside servers
Networking	8%-12%	\$2	\$5	Switches, optical modules, NICs, cables, back-end GPU networking
Power infrastructure	12%-18%	\$3	\$8	Substations, transformers, switchgear, UPS, PDUs, backup generation
Cooling / mechanical systems	6%-10%	\$2	\$5	Liquid cooling, chillers, cooling distribution, heat rejection
Building / land / site work	8%-12%	\$2	\$5	Land, shell, security, physical construction, permitting
Other / contingency	3%-5%	\$1	\$2	Design, engineering, commissioning, spares, buffers
Total	100%	\$25	\$45	1GW AI data center

Source: BofA Global Research Estimates, Epoch AI, JLL

BofA GLOBAL RESEARCH

Company specific assumptions: Google and Amazon custom silicon Advantage

For company-specific assumptions, we use a 2026 cost per GW of ~\$45bn for Meta, \$37bn for Alphabet and \$25bn Amazon. For Amazon, we can triangulate cost per GW based on Amazon's capex and 2-year GW capacity growth outlook. The higher Meta assumption reflects greater upfront costs for data center land/building (ahead of GPU deployment) and reliance on external GPU infrastructure. For Alphabet and Amazon, we assume lower cost per GW to reflect custom silicon usage, particularly the ability to use internally developed TPUs and Trainium/Graviton chips, which we believe can lower effective compute cost versus a more GPU-heavy architecture.

Alphabet Installed Capacity Estimates

We estimate Alphabet had 5.5W of capacity in 2025, which will increase 62% y/y to 8.9GW in 2026 and 66% y/y to 14.7GW in 2027. By 2030, we project Alphabet's installed capacity to reach 32.4GW.

Exhibit 3: We estimate Alphabet capacity will grow to 15GW by 2027

Estimated Alphabet Installed Data Center Capacity (GW)

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

We est. Alphabet's capex of \$195bn in 2026 and \$290bn in 2027. Assuming share of capex directed towards Cloud business and AI data centers increases from 45% in 2024, to 60% in 2025 and 70% by 2030 and avg. cost to add 1GW of capacity increases from ~\$31bn in 2024 to ~\$46bn by 2030, we estimate Alphabet's capacity will increase from ~8.9GW in 2026 to 32.4GW by 2030. The increase in cost per GW in 2026, followed by a decline in 2027, reflects timing dynamics in the capacity buildout (physical infrastructure before chips are deployed). We expect revenue per GW to fall in 2027 to reflect timing of capacity deployment, and then increase again in 2028.

Exhibit 4: We estimate Alphabet's capacity will increase from ~8.9GW in 2026 to ~32.4GW by 2030

Alphabet's Capex and Commissioned capacity estimates by year

Amazon Installed Capacity Estimates

We estimate Amazon had 16.2GW of installed capacity in 2025, which will increase 40% y/y to 22.6GW in 2026 and 38% y/y to 31.3GW in 2027. By 2030, we project Amazon's installed capacity to reach 58.1GW.

Exhibit 5: We estimate Amazon AWS capacity will increase to 31GW by 2027

Estimated Amazon Installed Data Center Capacity (GW)

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

We estimate AWS capex of \$159bn in 2026 and \$230bn in 2027. Assuming share of capex directed towards data centers at 100% and average cost to add 1GW of new capacity increases from ~\$23bn in 2024 to ~\$36bn by 2030 (as capacity becomes more weighted toward AI), we estimate Amazon's capacity will increase from ~22.6GW in 2026 to ~58.1GW by 2030.

Exhibit 6: We estimate Amazon's AI data center capacity will increase from ~22.6GW in 2026 to ~58.1GW by 2030

Amazon Capex and Commissioned capacity estimates by year

	2024	2025	2026E	2027E	2028E	2029E	2030E

BofA GLOBAL RESEARCH

Meta Installed Capacity Estimates

We estimate Meta had 5.0GW of installed capacity in 2025, which will increase 53% y/y to 7.6GW in 2026 and 48% y/y to 11.2GW in 2027. By 2030, we project Meta's installed capacity to reach 22.8GW.

Exhibit 7: We estimate Meta capacity will grow to 11GW by 2027

Estimated Meta Installed Data Center Capacity (GW)

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

We estimate Meta's capex of \$145bn in 2026 and \$185bn in 2027. Assuming share of capex directed towards AI data centers increases from 70% in 2024 to 85% by 2030 and average cost to add 1GW of new capacity increases from ~\$36bn in 2024 to \$49bn by 2030, we estimate Meta's capacity will increase from ~7.6GW in 2026 to 22.8GW by 2030. The increase in cost per GW in 2026, followed by a decline in 2027, reflects timing dynamics in the capacity buildout as data center capacity takes time to build and come online. As a result, effective cost per GW appears elevated in 2026, and then falls in 2027 as more of the prior-year investment begins to come online.

Exhibit 8: We estimate Meta's commissioned capacity will increase from ~7.7GW in 2026 to 22.8GW by 2030

Meta's Capex and capacity estimates by year

BofA GLOBAL RESEARCH

Power generation a key risk our capacity estimates

We think one of the biggest risks to our capacity estimates remains the power needed to supply estimated capacity builds. The US DOE estimates that data centers could consume up to 9% of US power generation by 2030, up from 4% today, which is directionally consistent with our capacity growth estimates. Cloud companies will need to be innovative with their power generation and consumption to enable their capacity ambitions both on a short and long-term basis. As chip innovation continues, we expect ongoing improvement in yields per GW of power capacity.

Section 3: Estimated revenues based on installed capacity

In this section, we review our estimates for monetization of data center capacity. We view this as a high-level revenue-capacity analysis that aligns with our AWS and Google Cloud revenue estimates. In this analysis we assume 30% of Google and Amazon capacity will be used for core businesses, while 60% of Meta's capacity will be used for its core business. For Meta, while the company does not currently operate a scaled enterprise cloud business, management has recently suggested that excess AI capacity could be sold externally, creating a potential additional monetization stream (See our note: [Enterprise sales could add visibility on AI capacity value](#)). We assume Meta's AI capacity (beyond core use) could be monetized at \$12bn/GW, within the \$10-\$17bn/GW range estimated for Amazon and Google.

Exhibit 10: Adj. Capacity assuming % of capacity used internally

Adjusted capacity available for AI / Cloud workloads

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Revenue per GW of Adj capacity

Using estimated Cloud revenue and adjusted AI / Cloud capacity, we derive revenue per GW of adjusted capacity. In 2026, we estimate AWS will generate \$168bn of revenue from its installed capacity base of 22.6GW (15.8GW for Cloud), representing ~\$10.6bn of annual revenue per Cloud GW. For Alphabet, we estimate Google Cloud revenues of \$97bn on 8.9GW of installed capacity (6.2GW for Cloud), representing ~\$16bn of annual revenue per GW. For Meta, while capacity will most likely be used for internal purposes, we estimate \$36bn of external capacity monetization potential, assuming 40% of 7.6GW of installed capacity (i.e. 3.0GW) and ~\$12bn of annual revenue potential per GW.

Exhibit 11: Estimated Cloud revenues per GW

Estimated Revenue per GW of adjusted AI / Cloud capacity

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Internet hyperscalers AI capacity could support ~\$900bn revenue by 2030

By 2030, we estimate Cloud revenues at \$409bn for AWS and \$387bn for Alphabet and we see potential for \$110bn for Meta. For AWS, this assumes total installed capacity increases to 58.1GW (40.7bn for Cloud), with revenue per GW at \$10bn/GW. For Alphabet, we estimate 32.4GW of total installed capacity (22.7bn for Cloud) and revenues per GW at \$17bn. For Meta, we estimate \$110bn of external capacity monetization potential by 2030, assuming 9.1GW of external capacity availability at \$12bn of annual revenue potential per GW.

Exhibit 12: Internet hyperscalers AI capacity could support ~\$900tr revenue by 2030

Revenue potential of installed data center capacity

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Section 4: Internet Hyperscaler Valuation Analysis

We analyze Internet hyperscaler valuation and evaluate companies on the basis of implied value per GW of AI / cloud capacity. In this analysis, which relies on several assumptions and estimates, we first back out the implied value of each company's core retail, advertising, and other core non-cloud businesses, and then compare the remaining enterprise value against estimated 2028 GW capacity.

While Meta does not have an established enterprise cloud business today, we think this analysis can help investors better assess the potential discount being applied to Meta's

emerging AI capacity asset relative to hyperscaler peers, and the implied upside if Meta can monetize this capacity through internal AI products, frontier LLM development licensing, or external compute leasing.

Our key assumptions:

- We conservatively value Meta ad revenues at 5.0x revenues (roughly 12x earnings assuming 50% margins and 15% tax rate), Google ad and subscription revenues at 6.5x revenues (roughly 15x earnings assuming 50% margins and 16% tax rate) and Amazon retail, 3P, subscription and ad revenues at 1.5x revenues (roughly 15x earnings assuming 8% margins and 18% tax rate).
- We assume 60% of Meta's capacity is used for core ad businesses, 30% of Google's capacity is used for core ad businesses, and 30% of Amazon's capacity is used for core retail/ads businesses.
- We use 2027 revenues for core valuation estimates, and 2028 GW capacity for market cap/GW analysis.

Alphabet

We estimate Alphabet's AI capacity at an implied valuation of roughly \$110bn per GW. This suggests a premium to Internet peers, supported by Google Cloud's TPU/Gemini differentiation and higher-value AI workload share.

Exhibit 13: We estimate Alphabet's AI capacity at an implied valuation of roughly \$110bn per GW

Alphabet GW Valuation Analysis

Net Cash	\$49
Enterprise Value (\$ bn)	\$4,428
Remaining Cloud / AI business value	\$1,595
2028 Capacity for AI/Cloud workloads (assuming 70% of total)	14.50
Estimated value per GW capacity (\$ bn)	\$110

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Amazon

We estimate Amazon's AI capacity at an implied valuation of roughly \$59bn per GW. This implied valuation is a discount to Alphabet and could reflect a lower Cloud revenue per GW yield, and less perceived AI infrastructure/LLM differentiation.

Exhibit 14: We estimate Amazon's AI capacity at an implied valuation of roughly \$59bn per GW

Amazon GW Valuation Analysis

Amazon	2027 Estimates
2027 Retail & Advertising Revenue (\$ bn)	\$731
Revenue Valuation multiple	1.5x
Retail and Advertising Business Estimated Value (\$ bn)	\$1,096
Amazon stock price	\$244.00
Diluted shares (YE'26) (mn)	10,929
Market Cap (\$ bn)	\$2,667
Net Cash	-\$115
Enterprise Value (\$ bn)	\$2,782
Remaining Cloud / AI business value	\$1,685
2027 Capacity for AI/Cloud workloads (assuming 70% of total)	28.37
Estimated value per GW capacity (\$ bn)	\$59

Source: BofA Global Research Estimates

BofA GLOBAL RESEARCH

Meta

We estimate Meta's AI capacity at an implied valuation of roughly \$4bn/GW. This implied valuation suggests the Street is assigning minimal to no value to Meta's AI infrastructure capacity.

Exhibit 15: We estimate Meta's AI capacity at an implied valuation of roughly \$4bn/GW

Meta GW Valuation Analysis

Meta	Estimates
2027 Advertising Revenue (\$ bn)	\$303
Revenue Valuation multiple	5.0x

BofA GLOBAL RESEARCH

Potential catalysts that could drive re-rating:

1. **Strong 2Q Cloud margins.** Amazon and Google both reported an q/q uptick in Cloud margins in 1Q 2027 and continued margin improvement could help support optimism on Cloud ROIs. Key margin drivers could include: 1) Unusually high capacity utilization, 2) Strong demand for Bedrock and Gemini Enterprise Agent Platform (formally Vertex AI), which could be generating reported revenues on a net (high-margin) basis, and 3) Cloud pricing increases (see our note: [Prime Day and AWS price increase in the news](#)).
2. **Visibility on incremental monetization revenue streams:** New AI-driven revenue streams could improve investor sentiment by providing clearer evidence that elevated infrastructure investment is translating into incremental revenue.
 - a. **Meta Enterprise/Cloud Offering Visibility:** In late May, Meta established a new Enterprise Solutions unit to drive corporate adoption of its AI tools. The new group is focused on customizing AI solutions for enterprise clients, with the goal of developing repeatable deployment models to scale adoption. Visibility on an enterprise AI offering could introduce optimism on meaningful new revenue stream.
 - b. **Meta AI Subscription offering ramp:** In late May, Meta launched a paid consumer subscription offering for its Meta AI capabilities. The rollout has begun in Singapore, Guatemala, and Bolivia, with broader expansion planned. Each 1% AI subscription conversion rate (~35mn users), and an ARPU of ~\$10 per month, represents ~\$4.2bn in incremental annual revenue (~1.5% upside to Street's 2027 revenue estimates).
 - c. **Meta Business Agent traction:** In early June, Meta made Meta Business Agent available globally. Broader adoption of business agents could enable businesses to automate customer engagement, marketing, and campaign management workflows, effectively evolving Meta's platform into a CRM- and customer-service-like software solution. We see future potential for Meta to monetize Business

Agents through subscription offerings, creating an AI marketing cloud opportunity.

- d. **Google New TPU venture launch with Blackstone:** Per the WSJ, Alphabet and Blackstone are planning to launch a new AI cloud company leveraging Google's TPU infrastructure. The report noted that the companies are targeting ~500MW of capacity by 2027 and have already identified a pipeline of data centers, some of which are already under construction. The new venture could accelerate ecosystem adoption and monetization of TPU capacity.
 - e. **Amazon agents:** AWS is increasingly positioning Bedrock AgentCore as the enterprise agentic AI platform. Broader adoption of Amazon agents could accelerate Bedrock usage, increase inference workloads, and support stronger monetization of AWS AI infrastructure.
3. **New products or Frontier AI breakthroughs:** Model or product breakthroughs that improve monetization, lower inference costs or expand addressable use cases could improve sentiment on AI investments.
- a. **Traction for OpenAI models on Amazon.** Amazon added OpenAI models to Bedrock in April and evidence of accelerating customer traction for Bedrock could drive optimism on the AWS platform.
 - b. **Meta's more advanced LLMs:** Management has indicated that more advanced models are in development, with "Watermelon" capabilities comparing favorably to leading edge models.
 - c. **Meta's new AI creative tools:** Leveraging Musespark, Meta is embedding AI-native creation capabilities directly into the user experience, including features such as Meta AI, making it easier for users to generate and share content in real time. This could increase content velocity, enrich the overall feed, and drive higher time spent across the platform.
 - d. **Google Gemini 4:** Google could launch its next Gemini model in 4Q'26. A step-function improvement in capabilities and inference efficiency could strengthen Google's AI product cycle across Search, Cloud and Workspace, while improving investor confidence that incremental AI capex and vertical hardware integration is leading to LLM leadership.
4. **New cost efficiencies that offset rising infrastructure costs:** AI continues to drive efficiency gains across large-tech platforms, specifically in areas such as coding, content moderation, and internal tooling, which could help moderate OpEx growth. While Meta did not lower FY26 expense outlook on the 1Q call, ongoing cost actions from the start of the year (recent 10% workforce reduction in May) have potential to drive OpEx below estimates.
5. **New disclosures:** New disclosures on AI revenue contribution, inference usage, capacity utilization, pricing, customer adoption, or AI product attach could give investors greater visibility into the return profile of AI spending and aid sentiment.
- a. **For Amazon,** more details on capacity growth, Bedrock traction, agent usage, and Bedrock revenue recognition could improve confidence that incremental infrastructure investment is translating into high Cloud ROI.
 - b. **For Google,** disclosure around capacity growth, Gemini API licensing revenues, TPU sales backlog and expectations, and Gemini Enterprise

Agent Platform ramp (formally Vertex AI) could help increase confidence in Cloud sales opportunity and margins.

- c. **For Meta**, disclosure around Enterprise AI opportunity, paid subscription opportunity or expectations, Business Agent monetization, or LLM progress could be positive for sentiment, as evidence of AI capacity monetization would help reframe infrastructure spend from a cost center into a potential new revenue stream.

BofA GLOBAL RESEARCH

Price objective basis & risk

Alphabet (GOOGL / GOOG)

Our price objective of \$430/\$430 is based on 28x 2027E core Google GAAP EPS plus cash per share. Alphabet has traded at an average multiple of 22x GAAP P/E over the last ten years, and we think our target multiple is reasonable vs history given expectations for double-digit revenue growth, Cloud margin expansion, and opportunity to capitalize on strong AI assets.

Downside risks are 1) loss of search traffic to AI tools from competitors, 2) LLM integration in search may take longer than expected or negatively impact search revenues, 3) revenue pressure from compliance with the EU Digital Markets Act (DMA), and 4) potential for increasing Capex and lower FCF-given AI investments.

Amazon.com (AMZN)

Our \$310 PO is based on our SOTP analysis that values AWS at 9x 2027E sales, 1P Retail at 1.0x, 3P Retail at 2.5x, and Advertising at 5.0x. Our 2027 sales multiples compare to 5.4x for SaaS comps, 1.3x for Retail comps, 2.3x for Marketplace comps, and 4.4x for Online Media comps. Our PO implies 3.5x blended 2027E P/Sales, and 31x 2027E EPS.

Downside risks to our estimates and price objective are increasing competition from offline and local retailers, share loss to Cloud competitors with advanced AI technology, elevated investment needs for AWS that could pressure margins and macro-economic pressures on consumer spend. The stock has been subject to heavy volatility in the past, and this volatility could increase due to economic uncertainty.

Meta Platforms Inc (META)

Our \$835 price objective is based on 24x 2027E GAAP EPS, plus net cash. On a total company basis, including Metaverse investments, our valuation is at a slight premium to S&P 500 given Meta's higher growth rate and AI opportunity. Historically, Meta has traded at an average premium of 3pts to S&P 500.

Downside risks are: 1) Significant dependence on digital advertising revenue, which remain highly sensitive to macroeconomic conditions, 2) Elevated spend on AI initiatives

that could negatively impact margins, 3) Growing base of fixed assets could reduce cost flexibility in a macro downturn, 4) Slowing pace of share repurchases with significant AI investments, 5) Intensifying competition for user engagement and advertising budgets from AI-native platforms, and 6) Elevated regulatory overhang from new teen safety cases or unfavorable outcomes in ongoing litigation.

Equity Investment Rating Distribution: Technology Group (as of 30 Jun 2026)

Coverage Universe	Count	Percent	Inv. Banking Relationships ^{R1}	Count	Percent
Buy	243	60.60%	Buy	123	50.62%
Hold	87	21.70%	Hold	45	51.72%
Sell	71	17.71%	Sell	21	29.58%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2026)

Coverage Universe	Count	Percent	Inv. Banking Relationships ^{R1}	Count	Percent
Buy	1987	56.11%	Buy	1190	59.89%
Hold	797	22.51%	Hold	496	62.23%
Sell	757	21.38%	Sell	391	51.65%

^{R1} Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. **VOLATILITY RISK RATINGS**, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. **INVESTMENT RATINGS** reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster ^{R2}
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

^{R2} Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. **Coverage Cluster** is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the [Price Charts website](#), or call 1-800-MERRILL to have them mailed.

BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Alphabet A, Alphabet C, Amazon.com, Meta Platforms.

BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Alphabet, Amazon.com.

The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Alphabet, Amazon.com, Meta Platforms.

BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Alphabet, Amazon.com, Meta Platforms.

The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Alphabet, Amazon.com, Meta Platforms.

BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Alphabet, Amazon.com, Meta Platforms.

BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Alphabet, Amazon.com, Meta Platforms.

BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Alphabet, Amazon.com, Meta Platforms.

BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Alphabet A, Alphabet C, Amazon.com, Meta Platforms.

The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Alphabet, Amazon.com, Meta Platforms.

BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall

profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Officers of BofA or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

Refer to [BofA Global Research policies relating to conflicts of interest](#).

"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

This information is prepared for the use of BofA Securities clients and may not be redistributed, retransmitted or disclosed, in whole or in part, or in any form or manner, without the express written consent of BofA Securities. This document and its content is provided solely for informational purposes and cannot be used for training or developing artificial intelligence (AI) models or as an input in any AI application (collectively, an AI tool). Any attempt to utilize this document or any of its content in connection with an AI tool without explicit written permission from BofA Global Research is strictly prohibited. BofA Global Research utilizes AI, including machine learning and other technologies, to enhance the services we provide to our clients. These technologies assist our analysts in various aspects of their work, including but not limited to data analysis, content extraction, content creation, data aggregation and summarization and identifying relevant information from diverse sources. All AI-driven processes are subject to review by BofA Global Research employees. BofA Global Research information is distributed simultaneously to internal and client websites and other portals by BofA Securities and is not publicly-available material. Any unauthorized use or disclosure is prohibited. Receipt and review of this information constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained herein (including any investment recommendations, estimates or price targets) without first obtaining express permission from an authorized officer of BofA Securities.

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to sustainability in this material is limited as discussed herein and is not intended to provide a comprehensive view on any sustainability claim with respect to any issuer or security.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.
