Space | North America

Adding SpaceX to the Space 60: US Space Value Chain Mapping

The Space 60 is a diversified list of publicly-traded enablers across the space value chain, from raw materials to launch and satellite operators. We add SpaceX, as its most vertically integrated, and now largest, constituent. Also adding HawkEye 360, Applied Aerospace, and Satellogic.

The Space 60's newest (and largest) member: SpaceX (SPCX): We recently initiated coverage of SpaceX (SPCX.O) at Overweight with a \$300 price target, reflecting our view of the company as a unique "X of 1" business that converts energy into intelligence at scale across space, connectivity, and AI. SpaceX is by far the world's largest orbital launch provider by both launch count and mass to orbit, having completed roughly 650 orbital launches as of March 2026, vast majority on reused Falcon boosters, with a reported 99% mission success rate; it is also transitioning toward Starship, a fully reusable vehicle over four times Falcon 9's payload capacity that we model cutting launch costs toward ~\$500/kg by 2030 and below \$150/kg by 2040.

The company's Starlink constellation is likewise the largest satellite network ever built, with more than 10,000 operational satellites (about 75% of all active maneuverable satellites in orbit) serving roughly 12 million broadband subscribers in over 160 countries/territories, plus a nascent direct-to-cell Starlink Mobile service already reaching about 7.4 million monthly unique devices. We see this launch-and-satellite dominance as the foundation for a fast-scaling AI infrastructure business (terrestrial and eventually orbital compute), underpinning our base-case revenue forecast of \$45 billion in 2026 growing to \$319 billion by 2030 and \$3.3 trillion by 2040, balanced against material execution, funding, and regulatory risk given the roughly \$300 billion/year of capex we expect by 2031.

- See our SpaceX Initiation here: [SpaceX: AI's Final Frontier; Initiate at Overweight, PT \\$300 \(7 Jul 2026\)](#)

In addition to SPCX, we add the following names to the Space 60:

- **HawkEye 360 (HAWK - Covered by Kristine Liwag):** HawkEye 360 is a Space-based signals intelligence ("SIGINT") company. It is the only company currently providing Space-based collection and analysis of unclassified radio frequency (RF) data at scale. HAWK's technology can be used across a variety of applications, including maritime, air defense, navigation interference detection, and communications monitoring. Its data analytics overlay provides differentiated intelligence for its end markets, creating strong demand for its products. We view it favorably that the company is already profitable, which is a significant differentiator versus other early-

Industry View	Attractive

Morgan Stanley does and seeks to do business with companies covered in Morgan Stanley Research. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of Morgan Stanley Research. Investors should consider Morgan Stanley Research as only a single factor in making their investment decision.

For analyst certification and other important disclosures, refer to the Disclosure Section, located at the end of this report.

stage, publicly-traded Space peers. Our A&D team sees upside to current levels and recently initiated at an Overweight rating with a PT of \$41 and a positive risk-reward skew of ~3.5.

- See Initiation: [HawkEye 360 Inc: Tracking the Invisible from Space, Initiate Coverage at Overweight Rating and PT of \\$41 \(1 Jun 2026\)](#)
- **Applied Aerospace & Defense (AADX - Covered by Kristine Liwag):** Applied Aerospace & Defense is an advanced design, engineering, and manufacturing company that produces a wide range of componentry and subsystems for Defense and Space end-markets. Underlying AADX's portfolio of >2,250 products, which spans aircraft structures, missile bodies, landing gear, radomes, and more, is deep expertise in material science and IP-enabled, advanced manufacturing processes. These processes and know-how, when combined with the company's ~1.5mn sq. ft. of production footprint, make AADX a supplier of choice for traditional Defense primes and new Defense tech players (e.g., neo-primes) alike. We see AADX as a way to play the broader Defense upcycle, but early risks associated with a recently-combined company temper the outlook. Our A&D team sees a balanced risk/reward and recently initiated at an Equal-weight rating and a PT of \$23.
 - See Initiation: [Applied Aerospace & Defense Inc: Defense Momentum, 'Show-me' Execution; Initiate at EW and \\$23 PT \(29 Jun 2026\)](#)
- **Satelllogic (SATL- Not Covered):** [Satelllogic](#) is a vertically integrated Earth-observation company that designs, manufactures, and operates a constellation of high-resolution imaging satellites, selling imagery, persistent-monitoring subscriptions, constellation capacity, and complete satellite systems to government, defense, and commercial customers. As of March 31, 2026, the company had 18 satellites in orbit, including 16 operational satellites, capable of providing frequent revisits and imagery at resolutions as fine as 50 centimeters. The company is also developing its AI-enabled Merlin constellation, with the first launch targeted for October 2026, ultimately designed to remap the entire planet daily at one-meter resolution.

Removing Qorvo (QRVO - Covered by Joe Moore), Iridium (IRDM - Covered by Justin Lang), and Globalstar (GSAT - Not Covered), Teck Resources (TECK - Covered by Carlos de Alba), due to pending M&A. We are removing Qorvo, which agreed in October 2025 to be acquired by Skyworks Solutions in a cash-and-stock transaction expected to close by year-end 2026; Iridium, which agreed on June 28, 2026, to be acquired by Rocket Lab in an approximately \$8.0 billion cash-and-stock transaction; Globalstar, which agreed on April 13, 2026, to be acquired by Amazon for approximately \$11.6 billion; and Teck Resources, which agreed in September 2025 to combine with Anglo American in an all-share merger of equals that, if consummated, will form Anglo Teck, a Canada-headquartered global mining company focused primarily on copper and other critical minerals.

Note: Like our [Humanoid 100](#), the Space 60 is intended to be a dynamic, non-exhaustive list of publicly traded companies with meaningful exposure to the evolving space economy. Constituents may be added or removed from time to time based on factors including changes in a company's business mix or thematic relevance, the materiality of its space-related revenue or operations, market

capitalization and trading liquidity, availability of a liquid U.S.-listed security or ADR, corporate actions such as pending mergers or acquisitions, and the need to avoid undue concentration within any single industry sub-category. Inclusion in, or removal from, the Space 60 does not by itself reflect a change in Morgan Stanley's investment rating, price target, or fundamental view of any company.

33Space 60 List Summary

The Morgan Stanley Space 60. The Space 60 is a comprehensive list of publicly-traded space enablers across the value chain, from raw materials producers, components manufacturers, and the operators themselves. *Given the very large number of companies that are involved, the vast majority of the list is limited to primarily companies with a heavy US presence.* We also limited the number of companies in any given sub-category to create a list with broader representation across disciplines.

We divide the list into 7 primary categories: Within this note, we also include a short primer within each category's section outlining key developments and technologies that enable the space economy.

- **Raw Materials & Mining:** Companies that extract the critical inputs from the ground to make space hardware possible.
- **Specialty Materials & Alloys:** Companies that engineer the high performance materials built to withstand extreme heat, stress, and radiation.
- **Propulsion & Fuels:** Suppliers of important gases or liquid fuels to power launch systems or in-space propulsion.
- **Electronics & Semiconductors:** Companies producing space-grade semiconductors and electronics that enable compute, communication, and control in harsh orbital environments.
- **Components & Subsystems:** Companies manufacturing critical components (anything from sensor suites to fluid valves/pumps to structures) that keep spacecraft operational.
- **Spacecraft & Launch Systems:** Companies that design, build, and/or launch complete spacecraft.
- **Satellite Operators & Services:** Operators of satellite constellations and ground infrastructure that monetize data, connectivity, and communications between space and Earth.

Note: Like our [Humanoid 100](#), this is meant to be a constantly evolving 'open source' list with companies added or removed as the industry landscape evolves. There is a large subset of companies we chose to exclude either to avoid overconcentration in one sub-category, due to small size, lack of materiality, or lack of a liquid ADR (if international).

Raw Materials & Mining

Overview

All space hardware begins in the ground. A single satellite can use dozens of specialty metals across structural, power, thermal, and communication systems. While demand is modest in the context of total global metal demand, spacecraft rely on highly specialized materials and alloys engineered to withstand extreme heat, stress, and radiation - often at costs reaching tens of thousands of dollars per tonne or more. For many of these metals, production is concentrated in a single country, operationally complex, environmentally or toxicologically challenging, and/or fundamentally constrained by natural scarcity.

US import reliance on critical minerals remains near a [30-year high](#), with China alone accounting for roughly ~60% in the case of rare earth mine production to over 80-90% or more in the case of minerals such as tungsten, gallium, and germanium (according to [USGS](#)). Disruptions in these inputs can delay manufacturing timelines across the value chain.

- For more details, please see: [Space Metals: The Critical Minerals Enabling the Space Economy \(15 Mar 2026\)](#)

Key Stocks

- **MP Materials (MP - Covered by Carlos de Alba):** MP Materials is a US-based rare earth magnet producer operating the only scaled rare earth mine and processing facility in the United States, with indirect exposure to aerospace and defense supply chains critical for satellites and guidance systems. The company operates the [Mountain Pass facility](#) in California, which represents the only rare earth mining and processing site of scale in North America, and manufactures rare earth magnets at its [Independence facility](#) in Fort Worth, Texas.
- **Almonty Industries (ALM - Not Covered):** Almonty Industries is a leading non-China tungsten producer operating the Sangdong Mine in South Korea, which began commercial mining operations in December 2025 and is expected to supply [80%+ of global non-China tungsten production](#) at full capacity. [Tungsten](#) is one of the densest and highest-melting-point metals known (3,422 °C), making it exceptionally valuable in extreme thermal environments. In space systems, it is used in rocket engine nozzles, thrust chambers, high-temperature structural components, heat shielding, radiation shielding, and re-entry vehicle components.
- **Freeport McMoRan (FCX - Covered by Carlos de Alba):** Freeport-McMoRan is one of the world's largest publicly traded copper producers, [ranking third globally among the top 10 copper producers](#) with approximately 5% of total worldwide mined copper production in 2025 based on net equity ownership. While space-related demand for copper and gold is likely minimal today, Freeport is well-positioned to benefit from any major uptick in demand driven by satellite manufacturing, space infrastructure, and aerospace applications given its status as a dominant global copper supplier.
- **Alcoa (AA - Covered by Carlos de Alba):** Alcoa Corporation is a global leader in bauxite, alumina, and aluminum products, operating approximately 25 facilities across eight countries with annual production capacity of ~48 million metric tons of bauxite, 10 million metric tons of alumina, and 2.5 million metric tons of aluminum metal. In October 2025, [Alcoa announced a JV supported by the US, Australian and Japanese governments to produce 100 metric tons of gallium](#) annually in Western Australia (representing ~10% of global demand), to diversify global supply away from China, which currently dominates [99% of primary gallium production](#). Gallium is a critical mineral essential for gallium arsenide solar cells and gallium nitride electronics used in satellite power systems, communications payloads, and electric propulsion.

Specialty Materials & Alloys

Overview

Spacecraft require materials that can tolerate the extreme temperature swings of deep space and high mechanical stress. Rocket engines also require extremely tight tolerances, often measured in microns, to manage combustion environments with temperatures above 3,000°C. Many of these applications use highly engineered **superalloys** (defined as alloys that can operate at a high % of their melting point, often 70% or more) which are typically nickel or cobalt-based and alloyed with various refractory metals (or metals with extremely high heat resistance and hardness) such as titanium, tungsten, molybdenum, niobium, or rhenium. *Notable superalloys used in space applications include:*

- **Inconel:** A nickel-based superalloy that typically contains ~50–70% nickel, 17–21% chromium, and smaller amounts of iron, niobium, molybdenum, titanium, and aluminum. Commonly used grades such as **Inconel 718** maintain strength and creep resistance at temperatures up to about 700°C and resist oxidation in high-pressure environments. Rocket manufacturers use it in turbopumps, combustion chambers, and structural engine components.
- **Waspaloy:** A nickel-based superalloy that includes chromium, cobalt, molybdenum, aluminum, and titanium, with nickel as the base element. It is designed for high creep resistance and maintains strength at temperatures up to about 870°C to 980°C. Aerospace suppliers use it in turbine disks and other high-stress rotating components in propulsion systems.
- **C-103:** A niobium-based refractory alloy composed of roughly 89% niobium, 10% hafnium, and 1% titanium. It retains strength at temperatures above 1,300°C and can operate at even higher temperatures in vacuum or with protective coatings. Engineers use it in rocket engine nozzles, thrusters, and high-temperature structures.

Not all space materials are metals. Engineers also heavily use fiber-reinforced composites, commonly carbon fiber reinforced polymer (CFRP), to reduce weight while maintaining strength and stiffness. These materials combine carbon fibers with polymer resins such as epoxy, while ceramic matrix composites support higher temperature applications such as thermal protection and propulsion components. Aerospace manufacturers use composites in satellite structures, payload supports, and launch vehicle components, where weight reduction can improve payload capacity and reduce launch costs. Numerous other composites are used on spacecraft for thermal insulation, radiation shielding, and micrometeoroid and debris protection.

Key Stocks

- **Carpenter Technology (CRS - Not Covered):** A leading producer of specialty titanium and nickel alloys serving the aerospace and defense markets, which represented over 60% of total revenue in fiscal year 2025. While space-specific bookings were not separately disclosed, management noted on the [2Q26 earnings call](#) that demand for specialty materials used in space has been increasing, driven by the growing number of commercial satellite launches as the space economy expands.
- **ATI (ATI - Not Covered):** A specialty alloy leader with aerospace and defense representing 68% of fiscal year 2025 sales, up from 62% in 2024, driven by strong demand for advanced materials including C103 alloy used in space and missile programs ([per 4Q25 earnings call](#)). ATI is one of the few US producers of C-103, a niobium-based refractory alloy specifically designed for high-temperature, high-strength applications in engines and thrusters.
- **Materion (MTRN - Not Covered):** A major US-based supplier of advanced materials and composites for the aerospace & defense, industrial, energy, and electronics industries including beryllium, tantalum, niobium, ceramics, and other materials. The company maintains a 7,444-acre mine at Spor Mountain, Utah - the world's largest source of beryllium ([85% of supply historically](#)). Beryllium is an [ultra-lightweight, high-stiffness metal](#) with exceptional thermal stability, making it uniquely suited for precision optical systems in space. It is approximately six times stiffer than steel on a weight-adjusted basis, while being about [30% lighter](#) than aluminum, giving it one of the [highest stiffness-to-weight ratios](#) of any structural metal. MTRN space market sales have increased fivefold in just three years ([as of the 3Q25 earnings call](#)), with the company securing meaningful wins for satellite mirrors and structural components at its largest space customers.
- **Hexcel (HXL - Covered by Kristine Liwag):** A leading producer of advanced composite materials (carbon composite structures, honeycombs, heat shields, etc.) for aerospace and defense applications, Hexcel's 'Defense, Space & Other' segment represented 39% of fiscal year 2025 revenue, totaling \$747.0 million. This segment grew 5.4% year-over-year in 2025, driven by domestic and international helicopter programs, a European fighter program, and growth in space sales, including launchers, rocket motors, and satellites.
- **Corning (GLW - Covered by Meta Marshall):** A premier supplier of glass aerospace optics including telescope mirror blanks, missile domes, free space optics (laser) and satellite windows. Corning has supplied [notable space programs in the past](#) including the Hubble, Gemini, and Subaru telescopes, and numerous NASA spacecraft missions. While space exposure is not reported today, its leadership in space glass products could position it as a potential beneficiary of growth in space-based infrastructure.
- **Park Aerospace (PKE - Not Covered):** A specialty materials supplier focused on advanced composites and metal assemblies for aerospace and defense applications, Park Aerospace generated 42% of fiscal year 2025 revenue from military markets of the company's \$62.0 million in total sales. Within the military segment, [rocket nozzles constituted the largest portion at 44% of military sales](#). The company supplies specialty ablative materials for rocket motors and nozzles to programs including the ESA Vega launch vehicle and the Mk21A Integrated

Reentry Vehicle for the Sentinel ICBM system.

Exhibit 17: Specialty Materials & Alloys Stocks in Space 60

Source: Company Websites, Morgan Stanley Research

Propulsion & Fuels

Overview

Both launch and in-orbit movement rely on engineered propellants and industrial gases. A single launch can require hundreds of tons of propellant with propellant often representing 85-90%+ of total launch mass. Launch vehicles have historically used a mix of refined kerosene (RP-1) as fuel combined with cryogenically cooled liquid oxygen (to enable combustion in the vacuum of space). However, multiple next-gen reusable launch vehicles are now transitioning from kerosene to methane given its cleaner combustion (less soot) which simplifies maintenance between flights. *Notable propellant gases used in space include:*

- **Launch Propellant:**
 - **Refined Kerosene (RP-1):** A highly refined hydrocarbon fuel with high energy density, launch providers have traditionally used RP-1 as the primary propellant in first-stage engines. It is *not* a cryogenic fuel and remains liquid at ambient temperatures, making it relatively easier to handle and requiring smaller tank sizes compared to alternatives.
 - **Liquid Hydrogen (LH2):** A cryogenic fuel stored near -253°C, LH2 offers high **specific impulse** (thrust produced per unit of propellant consumed) of ~450 seconds in vacuum, which supports upper-stage efficiency and deep space missions.
 - **Liquid Methane (LCH4):** A cryogenic fuel stored near -162°C, methane burns cleaner and more efficient than RP-1 (specific impulse of ~360-370 seconds vs. ~300-350 for RP-1) and can reduce carbon buildup (soot) in engines, which may simplify refurbishment in reusable systems.
- **Oxidizer:**
 - **Liquid Oxygen (LOX):** A cryogenic oxidizer stored at about -183°C, LOX supplies oxygen for combustion and pairs with fuels such as RP-1, liquid hydrogen, and methane across many launch systems. Engines that use RP-1 + LOX are referred to as 'kerolox' engines, 'hydrolox' for liquid hydrogen + LOX, and 'methalox' for liquid methane + LOX.
- **In-Space Maneuvering:**
 - **Xenon (Xe):** An inert noble gas used in electric propulsion, xenon enables high-efficiency thrust with specific impulse often above 1,500-3,000 seconds in ion and **Hall-effect** (using an electric field to accelerate ionized propellant at high exhaust velocities) thrusters for station-keeping and orbit adjustments.
 - **Krypton (Kr):** A noble gas used as an alternative to xenon in electric propulsion, krypton offers lower cost but delivers lower efficiency and thrust, which can require longer maneuver times.
 - **Argon (Ar):** A widely available noble gas, argon has been tested in electric propulsion systems due to its low cost, though lower atomic mass reduces efficiency compared to xenon and krypton.
 - **Hydrazine (N2H4):** A storable monopropellant that decomposes over a catalyst bed to produce thrust, hydrazine is widely used in satellite thrusters and reaction control systems despite handling and toxicity constraints.

Key Stocks

- Linde (LIN - Covered by Vincent Andrews):** A leading industrial gas company with [space propulsion](#) representing approximately ~2% of sales as of early 2026, though this business has experienced significant growth. Over the last three years, Linde's supplies into space and revenue from the commercial space segment have nearly quadrupled, with the company now supplying more than 4 out of 5 launches in the US (as of 2Q25 earnings call). Space customers [are expected](#) to become Linde's largest merchant customers by 2027, with space-related capex potentially exceeding \$1 billion by 2030.
- Air Products (APD - Covered by Vincent Andrews):** A major industrial gas supplier with [space propulsion](#) representing over 2% of total sales as of F1Q26, encompassing hydrogen, helium, oxygen, and nitrogen products for aerospace applications. The company estimates it holds approximately 40-50% of the total US space propulsion market share "based on the customers it serves" (may not be % of total gas supplied), with projected sales growth of 6-7% per year (as of F1Q26 earnings call). Air Products has been supplying liquid hydrogen for NASA since the 1960s and recently won over [\\$140 million in new NASA contracts](#), solidifying its role in both government and commercial space programs.
- Air Liquide (AI-FR - Covered by Tom Wrigglesworth):** Air Liquide has a [comprehensive presence in the space market](#) with a presence in every US launchpad for propulsion gases as well as long-term relationship with NASA. The group is also engaged in hydrogen to krypton and xenon for satellites, with technology spanning from launchers to satellites, and serves more than 180 customers in the US space ecosystem alone (per FY25 Earnings Call). The company considers "high technologies, including space, deep cryogenics and the quantum industry" as a market with major development potential, though specific revenue percentages or growth rates for the space segment are not disclosed.
- NewMarket Corp: (NEU - Not Covered):** A specialty chemicals holding company whose specialty materials segment - comprising AMPAC (ammonium perchlorate for solid rocket motors) and Calca (high-purity hydrazine for liquid fuel rockets) - [represented approximately 7% of total revenue in fiscal year 2025, and grew ~30% y/y](#). Calca, acquired in October, 2025, is the nation's leading producer of UltraPure and high-purity hydrazine - essential, mission-critical propellants that enable advanced aerospace and defense applications including in-space propulsion systems for satellites and space probes.

Electronics & Semiconductors

Overview

Satellites rely on radiation-hardened chips and sensors to operate in space. Standard commercial chips can fail quickly due to radiation exposure, while rad-hard components can operate for years in orbit depending on mission profile and shielding. These systems traditionally manage communication, navigation, and onboard processing. Engineers use several [radiation hardening methods](#), including silicon-on-insulator designs, physical shielding, error detection and correction, and redundancy at the circuit and system level. Materials also play a role, with wide bandgap semiconductors such as gallium nitride (GaN) offering higher breakdown voltage and improved power efficiency compared to silicon, along with strong resistance to certain radiation effects. [GaN devices](#) are widely used in RF power amplifiers and high-frequency communication payloads on satellites.

- **Why is there so much radiation in space?** Space contains higher radiation levels because while Earth's atmosphere and magnetic field block most charged particles, satellites operate outside much of that protection. Earth's magnetic field traps charged particles from the Sun and cosmic sources in two main regions called the [Van Allen radiation belts](#), with an inner belt at about 1,000 to 12,000 kilometers dominated by high-energy protons and an outer belt extending to roughly 60,000 kilometers dominated by high-energy electrons. Alpha radiation consists of heavy helium nuclei that stop quickly, beta radiation consists of fast electrons that travel further, and gamma radiation consists of high-energy photons that can penetrate most materials and require dense shielding.

Exhibit 22: Earth's Van Allen Radiation Belts (trapped energized particles originating from solar wind) endanger any electronics put in orbit.

Exhibit 23: Gamma radiation poses a severe threat to electronics, causing cumulative ionization damage that degrades performance and accelerates device failure

Source: Qorvo

Satellite communications rely primarily on radio frequency (RF) systems for both space-to-ground links and inter-satellite links. These systems operate across [spectrum bands](#) such as L, S, X, Ku, and Ka. RF links are reliable and resilient to weather, which supports consistent communication with ground stations. However, spectrum is limited

and data rates decline with distance, as signal strength decreases with the square of the distance due to free-space path loss (see: [inverse square law & space loss](#)).

- **For space-to-ground communication**, RF signals must pass through the atmosphere, which introduces attenuation, particularly at higher frequencies such as Ku- or Ka-band. Higher frequency systems can support higher data rates but require more precise pointing and experience greater atmospheric loss. Lower frequency bands such as L and S are more robust to atmospheric effects but support lower data throughput. *These lower bands are commonly used for direct-to-device and mobile satellite services due to better signal penetration and link reliability. Higher frequency bands such as Ku- and Ka-band are typically used for broadband satellite applications, where larger antennas and higher power enable greater data throughput.* Larger antennas can improve link performance but add mass and complexity.
- **For inter-satellite links**, RF enables direct crosslinks between spacecraft without atmospheric interference. These links support data relay and networked constellations but remain constrained by available bandwidth and onboard power.

Optical, or laser, communications are emerging for both inter-satellite and space-to-ground links. In space, laser inter-satellite links can achieve high data rates with relatively low power and no atmospheric interference. [NASA states](#) that optical systems can deliver data rates about 10 to 100 times higher than current RF systems. For space-to-ground communication, laser systems aim to increase throughput but face additional challenges. Signals can be disrupted by clouds and atmospheric turbulence, and systems require precise pointing to maintain alignment. As a result, [operators are testing](#) hybrid architectures that use RF for reliable ground communication and optical links for high-capacity data transfer.

Exhibit 24: Satellite Frequency Bands

Key Stocks

- **Analog Devices (ADI - Covered by Joe Moore):** Analog Devices is a [significant player in the space industry](#), providing radiation hardened semiconductors for commercial space operators, including Low Earth Orbit (LEO) and Geosynchronous Earth Orbit (GEO) satellites. The company's Aerospace and Defense business drives well over \$1 billion in annualized run rate revenue, representing more than 10% of total revenues ([as of 4Q25 call](#)). This segment achieved record results in fiscal 2025 and grew strongly in the double digits, and management believes the business has the capacity to more than double by end of decade.
- **STMicro (STM - Covered by Lee Simpson):** STMicroelectronics has reportedly supplied over [5 billion RF antenna chips](#) for LEO satellite consumer terminals since 2015 and is currently collaborating on future projects like the European Union's Iris² satellite constellation. The company's RF & Optical communications segment, which includes its low-earth orbit satellite business, grew 23% y/y in the fourth quarter of 2025.
- **Infineon (IFX.DE - Covered by Lee Simpson):** Infineon participates in the space market through its [radiation-tolerant power semiconductors and microelectronics](#) used in satellites and space-grade systems. Its components (particularly power management ICs, MOSFETs, and sensors) are designed to meet reliability requirements for aerospace and defense applications, including orbital platforms. A specific percentage of revenue derived solely from space exposure is not currently available in the company's public financial disclosures.
- **Microchip Technology (MCHP - Covered by Joe Moore):** Microchip Technology offers a comprehensive portfolio for space applications, including a leading portfolio of radiation-hardened FPGAs products for satellites. [It claims its products have over 60 years of spaceflight heritage](#) and have been embedded in over 90 space missions. The company's Aerospace and Defense business grew from 11% of total revenue to 18% in fiscal 2025 as other end markets declined.
- **Mercury Systems (MRCY - Not Covered):** [Mercury Systems provides](#) radiation hardened processing subsystems for space and satellite initiatives, including US national security space programs. In [fiscal 2025](#), the company's space business generated \$56 million in revenue, accounting for approximately 6.1% of its \$912 million total revenue (although the business declined 7.6% y/y).
- **TTM Technologies (TTMI - Not Covered):** [TTM Technologies'](#) Aerospace & Defense (A&D) segment represented 44% of total company revenues in full year 2025, growing 13% y/y (of that ~4% was space). The company provides printed circuit boards (PCBs) and radio frequency components for satellite communications, and radiation-hardened systems designed to withstand the harsh space environment.
- **Broadcom (AVGO - Covered by Joe Moore):** Broadcom could enable the space market through RF components, optical/laser components, custom silicon, and high-reliability optocouplers used in communications and defense electronics. The company already has some space-related exposure (though not quantified and likely minimal at this time), with [Broadcom materials](#) stating that its micro-optics are used in satellites.
- **Coherent (COHR - Covered by Meta Marshall):** Coherent is a supplier of [space-](#)

based laser communication links for LEO constellations. The business currently sits within its communications segment. While exact exposures are not disclosed today, the company could be a potential enabler of orbital AI infrastructure due to existing expertise in LEO laser optics (which are potentially poised to replace RF) combined with its deep roots with terrestrial datacenter operators today.

- **Lumentum (LITE - Covered by Meta Marshall):** Lumentum could enable the space market through lasers, transceivers, and other photonic components that fit optical communications architectures. Optical/laser communications systems can deliver data rates about 10 to 100 times higher than current RF systems, [according to NASA](#), but public sources do not clearly show that Lumentum already supplies inter-satellite or space optical communication programs.
- **NVIDIA (NVDA - Covered by Joe Moore):** At its 2026 annual GTC, [NVIDIA announced it would enter the space market through its Space-1 Vera Rubin module](#), a purpose-built AI computing platform designed for orbital data centers and satellite-based infrastructure. According to the company, the platform brings data-center-class AI into space, enabling real-time processing of satellite data, autonomous operations, and even large language models directly in orbit. Current partnerships include Aetherflux, Axiom Space, Kepler Communications, Planet, Sophia Space and Starcloud.

Components & Subsystems

Overview

Space systems depend on thousands of individual parts such as connectors, valves, bearings, actuators, and wiring harnesses. Each component must meet strict reliability and safety standards, often with qualification cycles that can last several years and include vibration, thermal vacuum, and radiation testing. Failure of a single component can compromise an entire mission, particularly in systems with limited redundancy.

Suppliers in this category focus on precision manufacturing and materials performance, with tolerances often measured in microns for fluid and mechanical systems. Many components must operate across temperature ranges from below -100°C to over 150°C and withstand launch loads exceeding several g-forces during ascent. Long qualification timelines and high switching costs can create durable supplier relationships with aerospace and defense customers.

Key Stocks

- Teledyne (TDY - Covered by Chris Snyder):** Teledyne has over a half a century of [involvement in space missions, providing imaging technologies](#) for commercial, civil, and national security Earth observation, planetary exploration, satellite communications, and scientific research. On April 1, 2026, Teledyne [announced the integration](#) of its space-focused technologies and businesses under "Teledyne Space," reinforcing its commitment to the global space sector. The company's Aerospace & Defense Electronics segment represents 17% of total sales [as of FY25](#) and grew 37% y/y. Specific revenue percentages and growth rates for space-only applications are not explicitly detailed in available disclosures.
- RBC Bearings (RBC - Covered by Kristine Liwag):** RBC Bearings is a key supplier for space and satellite applications, offering bearing products and engineered solutions used in rocket and satellite structures, propulsion systems, and satellite antennas with some of the largest space companies [among the company's major A&D customers](#). The company's [strategic acquisition of VACCO Industries](#) (supplier of valves and other subsystems to space & naval defense) in July 2025 for \$275 million further expanded its presence in critical space markets, with VACCO reporting [\\$118 million](#) in revenues for the twelve months ending March 31, 2025. The Aerospace/Defense segment (which includes space) saw net sales increase by 14% in [fiscal year 2025](#) and represents ~36% of sales.
- Applied Aerospace & Defense (AADX - Covered by Kristine Liwag):** [Applied Aerospace & Defense](#) is an advanced design, engineering, and manufacturing company that produces a wide range of componentry and subsystems for Defense and Space end-markets. Underlying AADX's portfolio of >2,250 products, which spans aircraft structures, missile bodies, landing gear, radomes, and more, is deep expertise in material science and IP-enabled, advanced manufacturing processes. These processes and knowhow, when combined with the company's ~1.5mn sq. ft. of production footprint, make AADX a supplier of choice for traditional Defense primes and new Defense tech players (e.g., neo-primes) alike. Per its S-1, 2025 revenue was \$498.8 million (up 24.8% y/y) with a \$17 million net loss and \$117.9 million of Adjusted EBITDA, and growth continued into 2026 with Q1 revenue of \$134 million (up 21% y/y) and over \$1 billion in backlog.
- Parker Hannifin (PH - Covered by Chris Snyder):** Parker Hannifin's [Aerospace Systems Segment](#) designs and manufactures valves, hydraulics, thermal solutions, and similar products for commercial, business jet, military and general aviation aircraft, [missile and spacecraft markets](#). For the [full fiscal year 2025](#), aerospace revenue (space not separately disclosed) was up 13.0% and represented 31% of total revenue.
- AMETEK (AME - Covered by Chris Snyder):** AMETEK's Electronic Instruments Group (EIG) focuses on sophisticated analytical, test, and measurement instruments essential for various sectors, including aerospace/[space](#). The company is also a supplier of [specialty alloys](#) for rockets and satellites. [Past/current space related applications](#) provided by the company include the Atlas V rocket, Artemis/SLS program, Orion crew vehicle, and many more. Aerospace and power made up 30% of overall revenue in [fiscal year 2025](#), up 7% y/y. Specific revenue percentage growth rates for satellite applications are not explicitly detailed in available

disclosures.

- **Amphenol (APH - Not Covered):** Amphenol is a leader in wiring and communication products for cable, satellite, and telecommunications-based video and data networks, offering a wide range of products for satellite applications. The company's growth strategy includes pursuing space, avionics, and defense cable assemblies. Amphenol's defense market (which includes space) represented [9% of sales in FY25](#), with sales growing 29% y/y organically in 4Q25 with mgmt specifically calling out space as a key driver [on the call](#).
- **Aptiv (APT - Covered by Andrew Percoco):** Aptiv is making a strategic move to leverage its expertise in high-reliability wiring/connectivity beyond its traditional automotive focus (supported by its spin-off of Versigent), aiming to broaden its role in space and defense among other markets. Per the company's [Nov 2025 investor day](#), A&D represents ~\$400mn in FY25 annual revenue (~2% of total, pre-EDS spin). It currently supplies space through both its [Winchester Interconnect](#) (wiring) and [WindRiver](#) (software) businesses.
- **Moog (MOG.A - Covered by Kristine Liwag):** Moog's Space and Defense segment sales were \$1.1 billion in 2025, up 9% YoY, with 1Q26 sales in the segment jumping 31% due to strong demand for satellite components and missile controls. The company primarily designs and manufactures actuation components for commercial and government spacecraft, missiles, and launch vehicles, with other expertise including space avionics, propulsion, and satellite bus solutions. Moog provides [fully integrated satellite bus solutions](#) that are modular and scalable for various missions, from CubeSats to payloads exceeding 1000kg.
- **Graham Corporation (GHM - Not Covered):** Graham Corporation provides equipment for propulsion, cryogenics, thermal management, advanced mixing, and life support systems for the space industry. Sales to the Space industry represented just 7% of revenue in [FY25](#). However, the business has grown at a 37% CAGR since 2022 with [customers including](#) Blue Origin, NASA, Relativity Space, ULA, and SES, among others.
- **Karman Holdings (KRMN - Not Covered):** [Karman Holdings](#) specializes in propulsion sub-systems, payload protection & deployment, and interstage systems for missile, defense, and space programs, including satellite applications. Space and Launch represented 36.9% of [2025 annual revenue](#), with the company projecting 53% total revenue growth (and adj. EBITDA +46% y/y - as of Mar 2026 earnings call) in 2026 as it scales production for next-generation launch vehicles and satellites.
- **Honeywell (HON - Covered by Chris Snyder):** Honeywell's [Aerospace Technologies](#) segment provides satellite and space components, advanced systems and instruments, and a wide range of products for space and defense applications. The Aerospace Technologies segment generated \$17.5B in 2025 revenue (up 13% YoY), with defense & space sales up 10%. The [company states](#) that its technologies are onboard 950+ satellites and every NASA crewed mission for ~60 years. Note that the company is [spinning the segment off](#) with completion planned in 3Q26. The segment will trade under the ticker HONA.
- **Lockheed Martin (LMT - Covered by Kristine Liwag):** Lockheed Martin's Space segment provides spacecraft and missile subsystems including avionics, payloads, strategic missile components, and mission-critical satellite technologies. Its

subsystem work supports GPS III, Next Gen OPIR, Orion, hypersonics, and missile defense programs.

- **Boeing (BA - Covered by Kristine Liwag):** Boeing supplies space-qualified structures, avionics, propulsion integration, payload systems, and mission hardware across satellites, launch vehicles, and crewed spacecraft. Its subsystem work supports SLS, Starliner, X-37B, and government and commercial satellite platforms.
- **Northrop Grumman (NOC - Covered by Kristine Liwag):** Northrop Grumman provides satellite payloads, sensors, propulsion elements, deployable structures, solid rocket boosters, and missile defense components. Its subsystems support SDA satellite layers, launch hardware, and strategic national security space programs.
- **RTX Corp (RTX - Covered by Kristine Liwag):** RTX participates in space subsystems through sensors, avionics, missile electronics, communications, guidance, and defense payload technologies. Its Raytheon business is relevant to radar, missile defense, and future space-based defense architectures.
- **Rocket Lab (RKLB - Covered by Kristine Liwag):** Rocket Lab supplies spacecraft components and subsystems including reaction wheels, star trackers, solar solutions, radios, separation systems, flight software, and structures. Its Space Systems segment supports customers from component supply through full spacecraft bus and mission integration.
- **MDA Space (MDA - Covered by Justin Lang):** MDA Space provides robotics, satellite payloads, antennas, sensors, digital satellite systems, and other spacecraft subsystems. Its Canadarm, satellite servicing, geointelligence, and communications payload heritage make it a key supplier for spacecraft and orbital infrastructure.
- **Redwire (RDW - Covered by Kristine Liwag):** Redwire supplies spacecraft components and subsystems including solar arrays, deployable structures, avionics, sensors, RF systems, payload adapters, and in-space manufacturing technologies. Its products support satellites, exploration vehicles, on-orbit servicing platforms, and other mission architectures.

Spacecraft & Launch Systems

Overview

This category includes companies that design satellites and rockets, and provides launch services to orbit. Launch providers completed over 330 orbital launch attempts globally in 2025 (317 successes), with cadence expected to increase as demand for satellite deployment grows. Vehicles range from small launch systems targeting payloads well below 1,000 kg to heavy-lift rockets capable of delivering over 20,000 kg to low Earth orbit (LEO).

Satellite manufacturers range from large defense contractors to newer commercial entrants focused on high-volume production of small satellites. Programs often involve multi-year development cycles, complex supply chains, and high upfront capital requirements. Reusability, manufacturing scale, and launch cadence are key areas of focus as providers aim to reduce cost per kilogram to orbit and improve turnaround times.

Key Stocks

- **SpaceX (SPCX - Covered by Adam Jonas):** SpaceX is the leading vertically integrated launch and spacecraft system provider, designing and operating full-stack vehicles including Falcon 9, Falcon Heavy, Dragon, Starship, and Starlink. Through Falcon 9-led launch operations, SpaceX accounted for more than half of global orbital launches in 2025 and delivered over 80% of global mass to orbit.
- **Redwire (RDW - Not Covered):** Redwire delivers spacecraft components including solar arrays, avionics, sensors, RF systems, deployable structures, and in-space manufacturing capabilities for satellites and on-orbit servicing. The company achieved record total revenues of \$335.4 million for full year 2025 (up 10.3% YoY), though its Space segment revenues (62% of total) decreased 18% compared to 2024. For 2026, Redwire is forecasting total revenues of \$450-\$500 million, representing 41.6% YoY growth at the midpoint (as of 4Q25 call).
- **Rocket Lab (RKLB - Covered by Kristine Liwag):** Rocket Lab provides launch services through its Electron small-lift rocket and is developing the Neutron medium-lift reusable vehicle, while also offering spacecraft manufacturing, satellite components, and mission services. The company generated \$601.8 million in revenue for 2025, up 38% y/y, with space systems revenue up 30% and launch services revenue up 59%.
- **Boeing (BA - Covered by Kristine Liwag):** Boeing's Defense, Space & Security segment develops strategic defense systems, satellite systems (government and commercial), space exploration programs including the X-37B space plane, Space Launch System (SLS) rocket, and Starliner spacecraft. The BDS segment reported \$27.2 billion in revenue for 2025 (up 14% YoY), representing 30% of Boeing's total revenue.
- **Northrop Grumman (NOC - Covered by Kristine Liwag):** Northrop Grumman's Space Systems delivers satellites, spacecraft systems, sensors, payloads, ground systems, missile defense interceptors, and launch vehicles including GEM 63 solid rocket boosters and Space Development Agency tracking/transport layer satellites. Space Systems sales decreased 8% in 2025 to \$10.7bn due to program wind-downs but returned to growth in Q4 2025 (up 5% YoY) driven by GEM 63 production for Amazon's Project Kuiper and restricted programs. For 2026, Space segment sales are expected to grow to approximately \$11bn, driven by restricted space and missile defense programs, with the company securing a \$764mn SDA contract for 18 Tranche 3 Tracking Layer satellites.
- **MDA Space (MDA - Covered by Justin Lang):** MDA Space provides satellite systems, robotics & space operations (including Canadarm technology with Canadarm3 advancing on schedule), and geointelligence services for civil, national security, and commercial customers. The company reported record revenues of \$1.6 billion in fiscal 2025 (up 51% YoY), with Satellite Systems revenues up 85% to \$1.1 billion driven by Telesat Lightspeed and Globalstar LEO constellations, and Robotics & Space Operations up 11% to \$309 million. For 2026, MDA anticipates revenues between \$1.7-\$1.9 billion (approximately 10% YoY growth at midpoint) with a backlog of \$4.0 billion.
- **York Space Systems (YSS - Not Covered):** York Space Systems offers standardized satellite platforms (S-CLASS, LX-CLASS, and M-CLASS) with production capacity exceeding 1,000 spacecraft per year across four facilities,

focusing on reducing costs and lead times while increasing reliability. Annual revenue for FY25, was \$386 million (up 52% YoY). In 2025, York completed 21 satellites for SDA's first-generation Transport Layer and secured a \$187 million commercial contract in February 2026 for a 20+ satellite constellation on the M-CLASS platform.

- **Lockheed Martin (LMT - Covered by Kristine Liwag):** Lockheed Martin's [Space segment](#) develops satellites, space transportation systems, strategic/defensive systems including Trident II D5, Next Gen OPIR, Next Generation Interceptor, Orion spacecraft, GPS III, hypersonics, and SDA Transport/Tracking Layer satellites. Space segment sales increased \$550 million (4% YoY) in 2025 to reach approximately \$13 billion (~17% of total revenue), driven by strategic/missile defense programs and Orion. For 2026, the Space segment is projected to grow approximately 5% to \$13.5-\$13.8 billion, driven by Fleet Ballistic Missile, NGI, and hypersonic programs.
- **Kratos Defense (KTOS - Not Covered):** Kratos provides virtualized satellite ground systems including the [OpenSpace Platform](#) (fully software-defined satellite ground system), command & control, telemetry/tracking/control software, and operates a global space domain awareness system with approximately 190 sensors across 20+ sites. The "Space, Training and Cyber" businesses achieved 22.7% organic revenue growth in 4Q25 and 13.6% for full year 2025. Kratos projects 15-20% total organic revenue growth for 2026 and 18-23% for 2027.
- **Firefly Aerospace (FLY - Covered by Kristine Liwag):** Firefly provides launch, orbital, and lunar services through its Alpha small-lift rocket, the Eclipse medium-lift reusable vehicle (still in development), Blue Ghost lunar lander (the only commercial vehicle to achieve fully successful Moon landing), Elytra spacecraft platform, and AI-enabled defense software via SciTec acquisition. The company generated record revenue of \$159.9 million in 2025 (up 163% y/y). For 2026, Firefly expects revenue of \$420-\$450 million, representing 172% y/y growth at the midpoint.
- **Voyager (VOYG - Covered by Kristine Liwag):** Voyager operates across Defense & National Security (communications, guidance/navigation, signals intelligence), Space Solutions (space infrastructure, advanced technology, mission services), and [Starlab Space Stations](#) (a commercial space station planned to succeed the ISS as a U.S.-led joint venture with Airbus, Mitsubishi, MDA Space, Palantir, and others). In 2025, Voyager reported \$166 million in net sales (up 15% y/y), with FY 2026 revenue projected at \$225-\$255 million (over 35% increase).
- **Intuitive Machines (LUNR - Not Covered):** Intuitive Machines provides lunar services through [Nova-C and Nova-D lunar landers](#), proliferated national security space architectures, and commercial GEO satellite platforms via Lanteris Space Systems acquisition. The company reported \$210.1 million revenue in 2025 (down 7.9% YoY) but projects a dramatic increase to \$900 million-\$1 billion for 2026 (nearly 5x growth), supported by a backlog of approximately \$943 million as of February 2026.
- **RTX Corp (RTX - Covered by Kristine Liwag):** RTX's Raytheon segment provides integrated air and missile defense systems including Patriot, GEM-T, SPY-6 radar, Evolved SeaSparrow Missile, and Tomahawk, with capabilities in [space-based systems](#) and discussions around Department of Defense space opportunities including the [Golden Dome](#) initiative. RTX reported total sales of \$88.6 billion in 2025 (up 10% YoY), with the Raytheon segment recording \$28.04 billion in sales

and Q4 sales up 7% driven by Patriot, GEM-T, and naval programs.

- **Applied Aerospace & Defense (AADX - Covered by Kristine Liwag):** Applied Aerospace & Defense supports spacecraft and launch-vehicle architectures across mission-critical structures, including satellite bus/payload assemblies, nose cones, fairings, payload adapters, propellant tanks, engine nozzles, deployable systems, and landing structures. Framed at the system level, the company is an integration-ready design and manufacturing partner for the structural backbone of spacecraft and launch vehicles, enabling payload integration, ascent survivability, deployment, and mission operations.

Satellite Operators & Services

Overview

Operators generate revenue by providing communication, Earth observation, navigation, and data services from orbit. Business models often rely on long-term contracts, capacity leasing, and subscription-based services. Operators deploy constellations ranging from a few high-value geostationary (GEO) satellites to hundreds or thousands of low Earth orbit (LEO) satellites. These systems support applications such as broadband or direct-to-device connectivity, remote sensing, and defense-related intelligence. Growth depends on demand for global connectivity, real-time data, and analytics, along with continued declines in launch and satellite manufacturing costs.

Key Stocks

- **SpaceX (SPCX - Covered by Adam Jonas):** SpaceX operates Starlink, the world's largest LEO broadband constellation, providing satellite internet, enterprise connectivity, mobility/in-flight/maritime service, and direct-to-cell capabilities through a vertically integrated satellite, launch, and ground-network architecture. Starlink's scale is unmatched, with SpaceX currently at 10,000+ satellites in orbit as of 6/30/2026 and roughly 75% of all active maneuverable satellites in orbit.
- **Amazon (AMZN - Covered by Brian Nowak):** [Amazon Leo](#) (formerly Project Kuiper) is Amazon's low-Earth-orbit broadband constellation designed to deliver global internet service, with regulatory approval for roughly 3,200+ satellites. Deployment relies on multiple launch providers, including Blue Origin's New Glenn, which is expected to carry large batches (~60 satellites per launch) as part of Amazon's contracted missions. The system is being built out in phases with >200 already in-orbit.
- **Gilat Satellite Networks (GILT - Not Covered):** Gilat is a global provider of ground-based satellite communications equipment and services, manufacturing VSATs, amplifiers, modems, antennas, and other satellite networking equipment. The company provides satellite broadband solutions for commercial applications (including in-flight connectivity, cellular backhaul, and enterprise services) as well as defense and government applications. [The company is currently projecting](#) (as of Feb 2026) 13% revenue growth and 19% adj EBITDA growth in 2026 driven by its commercial and defense segments.
- **Viasat (VSAT - Covered by Justin Lang):** Viasat is a global communications company operating a fleet of 23 satellites spanning Ka-, L- and S-bands, [providing satellite internet, in-flight connectivity, maritime services, and government/defense communications](#). The company offers residential satellite internet, business connectivity solutions, and secure communication services for governments and militaries. In addition to its space-based assets, Viasat maintains a substantial ground communications and infrastructure business, including a global network of gateway earth stations, satellite ground terminals, and managed network services.
- **AST SpaceMobile (ASTS - Not Covered):** AST SpaceMobile is building a space-based cellular broadband network intended to be accessible directly by standard, unmodified smartphones for both commercial and government applications. The company partners with over [50 mobile network operators \(MNOs\) with nearly 3 billion subscribers globally](#), using a revenue-sharing business model where MNOs offer the SpaceMobile Service to their customers without requiring new equipment or separate subscriptions. AST SpaceMobile reported full-year 2025 revenue of \$70.9 million and projects \$150-200 million in revenue for 2026, though the SpaceMobile Service has not yet launched commercially and current revenues come from government contracts and gateway equipment sales.
- **HawkEye 360 (HAWK - Covered by Kristine Liwag):** [HawkEye 360](#) operates a space-based RF signals intelligence (SIGINT) constellation of more than 30 satellites, geolocating RF emissions worldwide for U.S. and allied governments (61% U.S., 16% Japan, 23% other) plus commercial customers. Per its S-1, FY2025 revenue was \$117.7 million with \$24.8 million adjusted EBITDA and a \$302.7 million funded backlog (~2.6x revenue), and its December 2025 ISA acquisition added multi-domain signal classification and deeper intelligence-community integration.

- Planet Labs (PL - Covered by Kristine Liwag):** Planet Labs designs, builds, and operates one of the world's largest Earth observation fleets, including hundreds of Dove (SuperDove) nanosatellites that provide daily, global medium-resolution imagery, alongside higher-resolution SkySat satellites and its next-generation Pelican constellation. Together, these systems deliver a combination of high-frequency monitoring and high-resolution imaging. Planet Labs reported [fiscal year 2026](#) revenue of \$307.7 million (26% increase y/y) and projects fiscal 2027 revenue of \$415-440 million (approximately 39% growth at midpoint). The company is also a [partner with Google under Project Suncatcher](#) to deploy orbital datacenters with Google TPUs by early 2027.
- Blacksky Technology (BKSX - Not Covered):** BlackSky is a space technology company delivering real-time satellite imagery, AI-powered analytics, and high-frequency monitoring through its constellation of high-resolution LEO satellites, including advanced Gen-3 satellites with 35-centimeter imaging capability. The company provides space-based intelligence services to defense, government, and commercial customers for applications including critical infrastructure monitoring, supply chain tracking, and tactical intelligence, with over 50% of 2025 revenue from international customers. BlackSky reported 2025 annual revenue of \$106.6 million and projects 2026 revenue of \$120-145 million (24% growth at midpoint).
- Spire Global (SPIR - Not Covered):** Spire Global operates a constellation of approximately 100 nanosatellites that collect radio frequency data from Earth, providing space-based intelligence including weather data, aviation tracking, and RF geolocation services to defense, civil government, and commercial customers. The company offers space reconnaissance (RF signal detection and geolocation), weather and climate analytics using AI, aviation monitoring, and space-as-a-service solutions, with a focus on defense applications and commercial weather forecasting. Excluding the divested maritime business, [Spire delivered](#) 44% y/y revenue growth in 4Q25 and projects 50% core revenue growth for 2026 at the midpoint, driven by expanding defense contracts and NOAA weather data procurement.
- Telesat (TSAT - Not Covered):** Telesat is one of the largest global satellite operators providing mission-critical satellite communications services through its geostationary (GEO) satellite fleet for broadcast, enterprise, and government customers, with services including broadband internet, video distribution, and data communications. The company is developing [Telesat Lightspeed](#), a state-of-the-art LEO satellite constellation optimized for telecom, government, maritime, and aeronautical customers, with 198 satellites planned.
- Eutelsat (ETL.PA - Covered by Terence Tsui):** Eutelsat is a global leader in satellite communications, delivering connectivity and broadcast services worldwide. The company operates a fleet of 34 Geostationary (GEO) satellites and a Low Earth Orbit (LEO) constellation of more than 600 satellites, making it the first fully integrated GEO-LEO satellite operator following its combination with OneWeb in 2023. For fiscal year 2024-25, Eutelsat's total revenues stood at €1.24 billion, marking a 2.5% increase on a reported basis and 1.6% like-for-like compared to the previous year. LEO revenues specifically saw substantial growth, increasing by over 80% to €187 million in FY 2024-25, representing approximately 15% of total revenues, with the company anticipating LEO revenues to grow by 50% year-

on-year in FY 2025-26.

- **SES (SESFd.PA - Covered by Terence Tsui):** SES is a leading space solutions company that completed its acquisition of Intelsat in July 2025, creating a strengthened global satellite operator with an expanded fleet of 120 satellites across two orbits. The combined company operates a powerful fleet of around 120 state-of-the-art GEO and MEO satellites, including approximately 90 geostationary (GEO) satellites and nearly 30 medium earth orbit (MEO) satellites, supported by an extensive ground network covering 99% of the world's populated regions. For full year 2025, SES reported revenue of €2,627 million, a 33.9% increase at constant foreign exchange rates compared to €2,001 million in 2024.
- **Rocket Lab (RKL.B - Covered by Kristine Liwag):** Rocket Lab is an end-to-end space company spanning Electron and HASTE launch services, the developing reusable Neutron medium-lift rocket, spacecraft manufacturing, satellite components, and mission software. Its pending acquisition of Iridium would add an operational global LEO communications network, licensed L-band spectrum, and more than 2.5 million subscribers, transforming Rocket Lab into a more vertically integrated platform capable of designing, building, launching, and operating satellite constellations and communications services.
- **Satellogic (SATL - Not Covered):** Satellogic is a vertically integrated Earth-observation company that designs, manufactures, and operates a constellation of high-resolution imaging satellites, selling imagery, persistent-monitoring subscriptions, constellation capacity, and complete satellite systems to government, defense, and commercial customers. As of March 31, 2026, the company had 18 satellites in orbit, including 16 operational satellites, capable of providing frequent revisits and imagery at resolutions as fine as 50 centimeters. Satellogic reported 2025 revenue of \$17.7 million, up 38% year over year, and first-quarter 2026 revenue of \$6.1 million, up 80%. The company is also developing its AI-enabled Merlin constellation, with the first launch targeted for October 2026, ultimately designed to remap the entire planet daily at one-meter resolution.

Morgan Stanley & Co. International plc ("Morgan Stanley") is acting as financial adviser

to Anglo American Plc ("Anglo American") to combine with Teck Resources Limited ("Teck"), in an at market merger of equals (the "Merger") to form Anglo Teck group ("Anglo Teck") as announced on 9th September 2025. Anglo American has agreed to pay fees to Morgan Stanley for its financial services. Please refer to the notes at the end of the report.

Morgan Stanley & Co. International plc ("Morgan Stanley") is acting as financial advisor to Anglo American PLC ("Anglo American") in relation to the sale of its Steelmaking Coal Portfolio business to Dhilmar Limited as announced on [18 May 2026]. Anglo American has agreed to pay fees to Morgan Stanley for its financial services. Please refer to the notes at the end of the report.

Valuation Methodology and Risks

Space Exploration Technologies Corp. (SPCX.O)

Sum-of-the-Parts by Segment: Space, Connectivity, AI (Divided into X & Grok and Enterprise AI)

- \$300 Price Target = sum of Space (\$8), Connectivity (\$128), X & Grok (\$12), Enterprise AI (\$152)

2040 ending forecast period

6/30/2027 valuation date

11.1% WACC; 11.9% Cost of Equity

50% Enterprise AI valuation discount for execution risk

TGR of: 4.0% Space, 4.5% connectivity, 3.0% X & Grok, 5.0% Enterprise AI

Equates to 0.41 EV/EBIT/Growth

Risks to Upside

- Faster Starship reuse progress
- Faster Starlink capacity growth
- Stronger DTC / enterprise adoption
- More neocloud wins
- Cursor ARR acceleration
- Lower AI infrastructure time to power and cost

Risks to Downside

- Slower Starship reuse cadence
- Slower Starlink subscriber growth
- Weaker enterprise AI monetization
- Higher capex / cost per watt of compute
- Longer time-to-power
- Greater funding needs / dilution
- Regulatory delays

Important Regulatory Disclosures on Subject Companies

As of June 30, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: Firefly Aerospace Inc, Iridium Communications Inc, MDA Space Ltd, Rocket Lab USA Inc, Viasat Inc, Virgin Galactic Holdings Inc, Voyager Technologies Inc.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Firefly Aerospace Inc, Space Exploration Technologies Corp., Voyager Technologies Inc.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Firefly Aerospace Inc, Space Exploration Technologies Corp., Voyager Technologies Inc.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from Firefly Aerospace Inc, Gogo Inc, Iridium Communications Inc, MDA Space Ltd, Planet Labs PBC, Rocket Lab USA Inc, Space Exploration Technologies Corp., Viasat Inc, Voyager Technologies Inc.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from Gogo Inc, Iridium Communications Inc, Rocket Lab USA Inc, Space Exploration Technologies Corp., Viasat Inc, Voyager Technologies Inc.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: Firefly Aerospace Inc, Gogo Inc, Iridium Communications Inc, MDA Space Ltd, Planet Labs PBC, Rocket Lab USA Inc, Space Exploration Technologies Corp., Viasat Inc, Voyager Technologies Inc.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: Gogo Inc, Iridium Communications Inc, Rocket Lab USA Inc, Space Exploration Technologies Corp., Viasat Inc, Virgin Galactic Holdings Inc, Voyager Technologies Inc.

Morgan Stanley & Co. LLC makes a market in the securities of Iridium Communications Inc, Space Exploration Technologies Corp., Viasat Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of June 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Coverage Universe			Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1544	42%	453	49%	29%	757	44%
Equal-weight/Hold	1577	43%	390	42%	25%	769	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	544	15%	89	10%	16%	204	12%
Total	3,668		933			1731	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
