Gold and Silver: When Will ETF Buying Resume?

Gold is struggling for direction, with central bank gold buying improving but ETFs selling on Fed hike fears. Silver has seen similar ETF selling but has lagged gold, with softer industrial demand. From here, we see upside to both, contingent on the Fed avoiding a rate hike.

Key Takeaways

- ETFs were 20% of gold demand and 15% of silver demand in 2025, but have been selling precious metals since the Middle East conflict on rate hike fears.
- Gold central bank buying is accelerating, led by China and Poland.
- In contrast, silver industrial and jewellery demand have been pressured by high and volatile prices in 2025.
- We see room for both metals to rebound from here if the Fed can avoid rate hikes, in line with our US economists' view that disinflation has begun.
- We forecast \$4,450/oz for gold, \$65.40/oz for silver by Q4 2026.

Gold is seeing signs of improvement in central bank demand: Central bank gold selling dominated headlines in March/April, led by Turkey and Russia. However, sales have since slowed, and elsewhere, buying is accelerating, notably in China, which has added 40t YTD (versus 25.8t in FY25), Poland (+64t YTD versus 102t in FY25) and Uzbekistan (+33t YTD, versus 7.8t in 2025).

Physical silver demand is still challenged: Silver has lagged gold in recent months, impacted both by macro drivers and weaker industrial (solar) and jewellery demand, with high prices and volatility encouraging substitution and thrifting. This has weighed on silver's correlation with copper.

But the return of ETFs is the swing factor for both: ETFs were 20% of gold demand and 15% of silver demand in 2025 as rate cuts spurred a step up in precious metals buying. However, with the Middle East conflict and the shift in market pricing towards rate hikes, ETFs have been selling, holding back gold and silver prices. Our [economists](#) hold an out-of-consensus call that the Fed can stay on hold this year and cut twice next year, with the recent CPI print suggesting disinflation has begun. With this, we see room for ETFs to re-engage, although this may be Q4 weighted.

MS Outlook: We see upside to both gold and silver through 2H26 and into 2027, with around 11% upside to gold and 16% upside for silver by year-end, with the additional upside for silver supported by its higher-beta nature and our constructive view on copper. Stabilising central bank demand should provide a floor for gold, with any return of ETF buying a positive, while silver may see some return of its correlation to copper, as well as support from any ETF inflows.

Gold

Exhibit 3: We observed a strategic shift in central bank gold buying in 2022

Source: World Gold Council

Central banks re-engaging

Central bank gold selling dominated headlines in March/April, led by Turkey: Turkey had been one of the three largest official gold buyers of the 2022-2025 cycle (alongside China and Poland), adding 154 tonnes over four years. However, the start of the Middle East conflict, and Turkey's reliance on imports for up to ~90% of its fuel (AGBI), widened its trade deficit, driving dollar demand and pushing the Lira to record lows against a backdrop of 31% inflation in March. Turkey's Central Bank responded by selling gold to defend the currency, with Bloomberg reporting Turkey sold and swapped about 60 tonnes of gold in the two weeks after the Middle East conflict started.

And others were selling too: Russia has sold 34.2 tonnes YTD, already exceeding the 6.2 tonnes sold in 2025, as military spending and fiscal sanctions have deepened the federal deficit to 6 trillion rubles (\$83 billion) by the end of May. Azerbaijan has also flipped to a net seller, with the State Oil Fund of the Republic of Azerbaijan (SOFAZ) releasing 21.9 tonnes YTD after the rally in the gold price pushed gold's share in its reserves above SOFAZ's self imposed 35% threshold.

However, buying is accelerating elsewhere, notably China and Poland: China's PBOC has bought gold for 20 months consecutively, and has accelerated purchases since the pullback in the gold price. Before the conflict, China was buying around 1 tonne/month, but purchased 14.9 tonnes in June, taking YTD purchases to 40.1 tonnes, already exceeding the 25.8 tonnes bought in 2025. Poland has continued its strong buying momentum from 2025, purchasing 63.6 tonnes YTD (running ahead of its FY 2025 purchases of 100 tonnes on a time-adjusted basis). Uzbekistan has added 32.7 tonnes YTD, versus 7.8 tonnes in 2025. Overall, we have seen a global recovery in central bank purchases in recent data. Turkey's sales have also slowed significantly, to just 2.7 tonnes in May. Global net sales reached 50.6 tonnes in March, but April and May data showed higher purchases of 21.5 and 41.2 tonnes, respectively. YTD to May, identifiable gold purchases have reached 84.4 tonnes, down 30% from the equivalent period in 2025 but with room to recover further in 2H.

Exhibit 4: China has accelerated gold purchases, while Turkey has flipped to a net seller

Exhibit 5: China purchased 14.9 tonnes in June, the highest monthly addition since October 2023 and the 20th consecutive monthly inflow

Source: World Gold Council, Bloomberg

But ETFs still missing

Gold ETF holdings are flat YTD, with North America driving recent sales: While central bank buying undoubtedly supported gold prices in 2025, the biggest swing in demand came from ETFs, which bought around 800 tonnes of gold, not far off central bank purchases. In contrast, they are significantly lagging in 2026 so far. WGC data shows ETFs had only added 18 tonnes of gold between end-2025 and end 1H26, with large purchases in Jan, Feb and April offset by sales in other months, and net sales observed across every region in June, totalling 74 tonnes. North America has driven the reversal, with 42 tonnes of outflows in June taking first half net sales to 60.5 tonnes. By contrast, strong early year inflows in Asia have meant the region has remained a net buyer YTD, adding 69.7 tonnes in 1H, while European inflows also remain positive YTD.

The concentration of 1H outflows in North America highlights the region's recent role as the swing buyer. US listed funds are the marginal pool of gold ETF capital and tend to dominate both the up and down legs of a cycle. Because North America had led global inflows on the way up, it also had the most recently accumulated length to unwind when sentiment changed, particularly for additions that had taken place at higher prices.

Clarity on Fed path required for ETFs to re-engage: Gold ETF holdings are generally negatively correlated with Fed rates, and US flows are particularly sensitive. After the Middle East conflict increased inflation worries and shifted Fed rate expectations, the opportunity cost of holding gold rose most acutely for US-based investors. [Exhibit 8](#) highlights this relationship, with ETF buying really only starting a few months before the first rate cut in late 2024.

Exhibit 6: Fed rate pricing has changed since the conflict

Source: Bloomberg (WIRP function)

While Central Bank buying is more likely to continue regardless of price or monetary policy, re-engagement of ETFs will likely remain sensitive to the Fed path, real yields and the dollar. At the moment, the market is pricing 1.4 rate hike by year end, down from 1.7 early last week, with sentiment shifting on Middle East tensions and incoming US economic data. The softer June CPI print drove the drop in hike expectations, with our [US economists](#) of the view that inflation will continue to decelerate over the remainder of the year, allowing the Fed to remain on hold. However, one month of data does not indicate a trend and a recent re-escalation in the Middle East conflict adds further uncertainty to the rate trajectory. In our view, for ETFs to re-engage, the market would need to have more confidence that the Fed can at least remain on hold and move towards cuts next year. This may take time and more supportive economic data, suggesting patience will be needed for any gold positions.

Exhibit 7: North American sales have driven recent ETF gold outflows

Source: World Gold Council

Exhibit 8: Clear line of sight to rate cuts would be required for ETF holdings to meaningfully increase, in our view

Source: Bloomberg

Positioning picking up

What the data shows: After the Q1 washout, non-commercial positioning has started to rise in COMEX gold, particularly since mid-May, with net longs the highest since early February. As of 15th July, CFTC non-commercial net longs had risen by 34 k lots to 194 k lots, built through a combination of 23 k lots of fresh longs and 12 kt lots of short covering.

Macro money stepping in: Gold appears to be finding some support around \$4,000/oz, with Central Bank buying accelerating, plus signs that some discretionary macro money is stepping in, driven by the structural story of fiscal deficits, reserve diversification and fiat currency debasement.

But CTAs leaning the other way: The complication is that gold is now trading below its 200 DMA. Having initially bounced off the 200 DMA in March, gold moved below the key technical level in early June and has not recovered since. In mid-July, the 50 DMA also crossed below the 200 DMA, triggering a "death cross". This matters because CTAs and other algorithmic traders mechanically reduce longs or add shorts when price sits below key moving averages and momentum is negative. With gold beneath the 200 DMA and short term moving averages sloping down, CTAs are likely biased toward selling rallies, rather than buying dips, which may have limited upward price movement recently, despite Central Bank buying accelerating and macro money adding length.

Exhibit 9: Gold net non-commercial positioning has started moving upwards again

Source: Bloomberg

Exhibit 10: But gold is still below its 200 DMA, with the 50dma recently moving below the 200dma, triggering a "death cross"

Source: Bloomberg

MS Outlook: We see gold's risk-reward skewed to the upside, provided the Fed can avoid another tightening cycle. Our US economists expect inflation to decelerate and the Fed to remain on hold this year, while a clearer path toward cuts next year should lower real yields and encourage ETFs to re-engage. With global ETF holdings broadly flat YTD following North American led outflows, even a partial return of US funds, the marginal swing buyer, could provide meaningful upside. The key downside risk remains renewed Middle East escalation and higher oil prices, which could revive inflation concerns and push rate expectations higher.

Central Bank demand should provide a firmer underlying floor, with Turkey's sales slowing and purchases accelerating in China, Poland and Uzbekistan. Positioning has also begun to recover, suggesting discretionary macro investors are rebuilding exposure. Technicals remain a near-term headwind, however, with gold below its 200 DMA and the recent "death cross" keeping CTAs biased towards selling rallies. A sustained move back above the 200 DMA could reverse this pressure and, alongside renewed ETF inflows and continued Central Bank buying, reinforce our more bullish outlook – MSe \$4,450/oz for 4Q26.

Silver

Correlations breaking down: Silver appears to be disconnecting from the two metals it typically tracks most closely – gold and copper. Silver was 79% correlated to gold in the first 6 months of 2026, down from 98% in 2H25, while its correlation with copper has fallen from 95% in 2H25 to 0% currently. This suggests silver's drivers may be changing as it grapples with changing end use demand and macro headwinds, with precious metals themes outweighing industrial demand at the moment.

Copper/Silver disconnect: Silver's correlation with copper has seen the biggest shift this year, falling from 95% in 2H25 to 0% currently. Historically, this strong correlation has been driven by similar exposure to electrical sectors, given their strong electrical conductivity, but this appears to be changing. While copper has seen good end use demand from grid spend and data centres, as well as US stocking demand ahead of potential tariffs (see [Scenarios for US Copper Tariffs](#)), silver's industrial use has been more challenged, particularly in the solar sector.

The photovoltaic (solar) sector accounted for 17% of silver demand in 2025, up from 7.4% in 2019, but risks to demand skew more to the downside than upside from here. Silver demand from the photovoltaic sector already fell 6% YoY in 2025, and the Silver Institute forecasts a further 19% drop in 2026 as solar output slows and thrifting and substitution become more prevalent. China's solar cell output is down 2% YTD, while installations are down 70% off a high base with changing power price tariffs in May 2025. China is also planning a [consumption tax](#) which may further weigh on demand. Exports have been helping, up 43% YTD, but volumes slowed in May as VAT rebates are being phased out too. Co-location of ESS battery capacity may help provide some offset here.

Silver accounted for 30-35% of the cost of a solar panel last year, driving focus on reducing silver intensity. For example, Longi, China's biggest solar producer, has recently started a new factory which replaces silver with copper, taking 3 months to get it up and running. We model 2024 to be the peak in silver demand from solar, and while global installations may still rise, we assume thrifting and substitution continue.

Exhibit 11: Solar cell output is down YoY in China

Source: Bloomberg

Exhibit 12: Chinese solar exports had been offsetting lower domestic demand, but these are rolling over too with the phase out of VAT rebates

Source: China Customs, Bloomberg

Silver jewellery demand has also been under pressure, down 8% YoY in 2025 and

potentially falling again in 2026. [Pandora](#) (covered by Grace Smalley) is pivoting to platinum-plated jewellery, away from Sterling Silver, while [Tiffany](#) is also pivoting towards gold. China's silver imports started the year strong, perhaps as some metal was re-directed from Dubai, but these have plunged too.

Exhibit 13: Jewellery demand has been falling

Source: The Silver Institute

Exhibit 14: China's silver imports have plunged too

Source: China Customs

Macro headwinds remain: Along with platinum and palladium, silver is down around 23% YTD, versus gold only down 8%, suggesting the industrial demand headwinds have hurt demand as well as macro challenges. This is also clear in silver's correlation with gold, which has fallen from 98% in 2H25 to 79% in 1H26. With silver's recent underperformance, the Gold/Silver ratio has rebounded to 70x (from a trough of 46x in late January), in line with our long-run estimates.

Exhibit 15: Silver ETF holdings have trended downward through 2026

Source: Bloomberg

ETFs remain absent but with room to re-engage: Bloomberg's reported total known silver ETF holdings peaked in late 2025 around 870 Moz, but have drifted down to 784 Moz through 2026, a 10% decline versus the 5% decline seen in gold holdings from peak. The ETF outflows were likely triggered by some profit taking after silver more than doubled in 2025 and a more hawkish Fed outlook that has lifted real yields and also threatened silver's industrial demand.

Similar to gold, in our view, re-engagement would require stronger expectations that Fed rate hikes can be avoided, as well as a credible path back toward rate cuts, with a steadier industrial/growth outlook too. We model a significant slowdown in buying for this year but assume ETFs are still net buyers, in line with the Morgan Stanley view that the Fed can stay on hold this year. If the Fed ends up hiking rates though, we may see more downside risk to this.

MS Outlook: The Gold/Silver ratio has rebounded to 70x, in line with our long-run estimates. We see slightly more upside for silver than gold by 4Q, given silver's recent underperformance, and this could emerge if silver re-connects with copper or ETFs return to buying. We continue to watch interest rate developments in the US and incoming economic data which could support ETF re-engagement. Silver may also see upside risks if copper prices rise and the correlation re-emerges, but solar weakness is likely to remain a headwind. In contrast to gold, silver positioning on COMEX remains flat for now, suggesting investors remain on the sidelines for now.

Week in Review

Base Metals: Base metals posted a mixed performance last week amid renewed tensions in the Middle East. Aluminium was up 0.4% WoW, with any further disruption to the Strait of Hormuz likely to restrict recovery in flows out of the region. LME copper was up 0.3% WoW as LME inventories continued to draw; however, COMEX copper fell 0.3% WoW, potentially due to higher exposure to the macro implications of re-escalation in the Middle East. Nickel gained 1.3%, with tensions in the Middle East likely to further restrict the flow of sulphur to HPAL operations in Indonesia. Lead and zinc fell 0.7% and 2.5% WoW, respectively.

Precious Metals: Re-escalation of tensions in the Middle East weighed on gold and silver last week as inflation fears and Fed path uncertainty continued, despite a softer US CPI print. Gold and silver were down 2.5% and 6.65 WoW, respectively. Platinum was down 2.3% and palladium fell 2.5%.

Bulks: Bulks posted a mixed performance last week. For iron ore, supply constraints due to a strike at Port Headland and higher freight rates supported a rebound to \$100/t mid-week, although prices eased slightly through Friday, ending the week 0.8% higher WoW. Met coal fell 2.4% WoW amid a weakening steel outlook in China. Thermal coal was up 1.1% WoW, tracking the rest of the energy complex higher as tensions re-escalated in the Middle East.

Commodity Thermometer

Exhibit 20: Metals & Mining Commodity Thermometer

Commodity	Bearish	Neutral	Bullish	Thesis
COMEX Copper				COMEX copper should outperform if US copper import tariffs are announced with delayed implementation, or if the decision is delayed, but ruling out tariffs completely would bring downside.
Uranium				Uranium should rise on strong spot demand, improving contracting activity and tight mined supply.
Gold				Gold's risk-reward looks positive from here if the US Fed can avoid rate hikes. A continued decline in oil prices should also reduce pressure from central bank selling, while China has been accelerating purchases in recent months.
LME Copper				LME copper should also be dragged higher on any US tariff announcement, while Chinese demand has been robust despite high prices. Supply is challenged, but 2027 may feel looser with less US buying.
Thermal Coal				Thermal coal prices remain supported into 3Q26 by elevated Asian coal burn in an El Niño summer and lower Indonesian YoY exports. However, weak China/India imports on high inventories should cap price upside.
Silver				Silver is likely to remain volatile in 2026, with industrial demand risks and ETF selling combined with tight inventories and resilient Chinese demand.
Manganese Ore				Some supply curtailments are needed to balance the market – we think this comes from South African road-bound supply, but cost support is also falling with lower freight and diesel costs, suggesting modest further downside.
Zinc				Smelter disruptions may bring some near term tightness to ex-China but fundamentals remain soft as Chinese output accelerates and construction demand faces headwinds, tipping the market into a small surplus this year and limiting upside.
Cobalt				Cobalt remains supported by DRC export restrictions, but Indonesian supply may improve if sulphur availability recovers.
Lead				Continued growth in secondary output and soft demand maintain market surplus, limiting upside despite a tight concentrate market and risks to primary output.
Nickel				Potential new mining quotas in Indonesia cap upside, but other supply challenges remain.
Alumina				Alumina sees a tighter balance than before on stronger aluminium output, while potential Guinea bauxite restrictions bring cost pressures. However, surplus remains.
Lithium Carbonate				Demand remains healthy but supply is responding to high prices with restarts in Australia and shipments resuming in Zimbabwe. The restart timing of CATL's lepidolite mine remains the key unknown.
Platinum				With speculative activity at much lower levels, the risk reward has improved dramatically. We may still see OEM metal buying fall in 2H, but in the medium-term the metal remains in fundamental deficit.
Hard Coking Coal				We see modest downside to Met coal with weaker Chinese seaborne demand and recovering supply.
Palladium				High inventories levels have driven a price correction which now sees marginal cost production turning cashflow negative. We think prices need to remain depressed in 2H to trigger supply cuts.
Aluminium				Middle East disruptions are reversing more quickly, while Chinese-led supply growth elsewhere is accelerating, pushing aluminium into surplus in 2027 and weighing on prices.
Iron ore				Iron ore is shifting to oversupply on stronger seaborne supply and softer Chinese demand, while cost support should also be reversing.

Disclosure Section

The information and opinions in Morgan Stanley Research were prepared or are disseminated by Morgan Stanley Europe S.E., regulated by Bundesanstalt fuer Finanzdienstleistungsaufsicht (BaFin) and/or Morgan Stanley & Co. International plc, authorized by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. Morgan Stanley & Co. International plc disseminates in the UK research that it has prepared, and which has been prepared by any of its affiliates, only to persons who (i) are investment professionals falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (as amended, the "Order"); (ii) are persons who are high net worth entities falling within Article 49(2)(a) to (d) of the Order; or (iii) are persons to whom an invitation or inducement to engage in investment activity (within the meaning of section 21 of the Financial Services and Markets Act 2000, as amended) may otherwise lawfully be communicated or caused to be communicated. As used in this disclosure section, Morgan Stanley includes RMB Morgan Stanley Proprietary Limited, Morgan Stanley Europe S.E., Morgan Stanley & Co International plc and its affiliates.

For important disclosures, stock price charts and equity rating histories regarding companies that are the subject of this report, please see the Morgan Stanley Research Disclosure Website at www.morganstanley.com/eqr/disclosures/webapp/generalresearch, or contact your investment representative or Morgan Stanley Research at 1585 Broadway, (Attention: Research Management), New York, NY, 10036 USA.

For valuation methodology and risks associated with any recommendation, rating or price target referenced in this research report, please contact the Client Support Team as follows: US/Canada +1 800 303-2495; Hong Kong +852 2848-5999; Latin America +1 718 754-5444 (U.S.); London +44 (0)20-7425-8169; Singapore +65 6834-6860; Sydney +61 (0)2-9770-1505; Tokyo +81 (0)3-6836-9000. Alternatively you may contact your investment representative or Morgan Stanley Research at 1585 Broadway, (Attention: Research Management), New York, NY 10036 USA.

Analyst Certification

The following analysts hereby certify that their views about the companies and their securities discussed in this report are accurately expressed and that they have not received and will not receive direct or indirect compensation in exchange for expressing specific recommendations or views in this report: Amy Gower (Amy Sergeant), CFA; Martijn Rats, CFA.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictolicies. A Portuguese version of the policy can be found at www.morganstanley.com.br

Important Regulatory Disclosures on Subject Companies

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of June 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1544	42%	453	49%	29%	757	44%
Equal-weight/Hold	1577	43%	390	42%	25%	769	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	544	15%	89	10%	16%	204	12%
Total	3,668		933			1731	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to <https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch>.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (<http://www.morganstanley.com/terms.html>). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (<http://www.morganstanley.com/terms.html>). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common

equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
