一页摘要

- Bernstein：We believe demand for the company ’ s products seems unlikely to be affected, but it seems plausible to postulate increased risks (regulatory etc.) as AI buildouts become an increasingly political issue, and this news seems likely to keep NVIDIA (and its CEO) at the center of that debate.

- Bernstein：We see $3B+ ARR added in EDR/XDR + Guardian through FY29. ~40-50% of enterprise seats are still on legacy anti-virus or “ next gen anti-virus ” and over the next 2-3 years we ’ d expect most of them to move towards EDR/XDR.

- Bernstein：Our short term positive view was underpinned by the belief that we had strong visibility to near-term growth for AI infrastructure spend, and that valuations for our sector were not demanding relative to the rest of hardware / semis.

- BofA：We assume BAT accounts for 50% of total capex, reflecting less aggressive AI investment and tighter chip access, implying US$555bn of onshore and US$53bn of offshore capex.

- BofA：That said, some investors noted that they had already trimmed positions (in memory stocks) and pointed to high shareholder returns / low valuation multiples, particularly for Samsung Electronics and SK Hynix.

- Citi：Specialty e-fabric n is progressing, with first-generation Low-Dk and T-fabric expected to contribute revenue from 1Q27, although volumes remain limited initially.

- MS：MIR expects automation growth to accelerate to 3.8% in 2027 from 1.6% in 2026, led by AI-related demand, 15th FYP project starts, equipment upgrades, and overseas projects, while foreign brands' price increases and delivery delays create further opportunities for domestic suppliers.

- MS：We see multiple buying opportunities among AI enablers, infrastructure, and adopters, and broadly view the recent market weakness as unwarranted.
