

Pulp & Paper: China Hardwood Pulp: A Point In the Cycle We Have Seen Many Times

We have been arguing that we see hardwood prices at around \$600/t as being close to peak through the cycles ([link](#)), as around and above those levels China integrated paper producers are more competitive and tend to gain market share from non integrated. So that reduces market pulp demand and also pricing power for pulp and paper sellers.

Hardwood prices have been flat in China since late 1Q, but our channel checks note that volumes sold in April-May have been below 50% of regular volumes. And while producers had limited availability due to downtime in the quarter, sales were below available volumes and sellers inventories have been trending higher. With June being the last month of the quarter, pressure to sell increases and buyers are in no rush to place orders.

RISI reports that Arauco and CMPC have cut offers by \$20/t to around \$580/t, but our conversations suggest this is not enough to attract significant buying. So our view is that prices need to fall further for buying to be sufficient to a point where full volumes can be allocated.

We have seen the same situation in pretty much all bear cycles, and sellers usually decide to hold back volumes to temporarily limit price declines in China as this would preserve benchmark prices in other regions, including Europe and the US. But we see as inevitable that China hardwood prices continue to fall and that eventually will impact other major regions, specially as current net prices are at least \$50/t higher outside of China, a situation that we view as unsustainable.

With new pulp capacity coming online in China and in Indonesia by YE, expectations are that we will likely trend towards marginal cost before significant buying or production slowdowns stabilize supply/demand and pricing.

China FOEX hardwood imported pulp prices were flat at \$605/t, while domestic resale prices were down by RMB 22-70/t to the equivalent of \$549-556/t. On the softwood side, imported FOEX prices were down by \$12/t to \$641/t, while domestic resale prices declined by RMB 114-155/t w/w, to the equivalent of \$584-616/t.

Global

- **Global pulp statistics: May shipments increased 3% m/m but decreased 1% y/y.** May's shipments increase was driven by both softwood (+7% m/m) and hardwood (+2% m/m), in line with seasonality. Compared to 2025, the shipments decrease was mainly driven by hardwood (-5% y/y), partially offset by softwood (+4% y/y). Sellers' hardwood inventories increased 3 days m/m to 43 in May. Seller's softwood inventories increased 1 day m/m to 47 days. YTD global shipments are down by 2.5%.

China

- **China's pulp imports decreased 10% m/m but increased 4% y/y in May.** Total pulp imports reached 2.1 mt in May, mainly on lower imports for softwood (-20% m/m) and hardwood (-3% m/m). YTD imports are up 2%.

- **China's woodchips imports decreased 2% m/m and 4% y/y in May.** May's imports showed a decrease vs April numbers, likely explained by rising prices and competition with China domestic wood, which reached the highest level since 2023. YTD imports up 8% y/y (+0.5mt). With China wood supply increasing and prices falling, coupled with lower oil/freight rates, we would expect imported chips prices to also follow a negative trend.

Europe

- **Essity: Oil relief lifts forecasts, but margin risks persist; Neutral.** Our GS Europe consumer products team has updated its view on Essity after oil prices have fallen 30%, easing pressure across petrochemical, energy, and fuel inputs, while pulp prices have continued to edge modestly higher. On balance, they now expect mid-single-digit unit cost inflation in FY26, weighted toward H2 as raw material costs feed through with a lag. In their view, while lower oil alleviates some earnings pressure, it does not eliminate the risk of mounting gross margin headwinds later in the year, which they believe consensus still underappreciates. In terms of prices, although several tissue producers, including Essity, have announced price increases, they expect implementation to lag, as it did during the 2022 inflation cycle. In the

meantime, European producer price data continues to point to manufacturer-level price declines in April and May, while Nielsen data suggests shelf-price deflation is still persisting. More details [here](#).

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or

policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
