

Australian and New Zealand Inflation Monitor: Further Indirect Effects From Higher Oil Prices Expected in May

- In Australia, headline CPI increased by 0.4%mom in April, though year-over-year inflation decelerated 40bp to 4.2%yoy. Compositionally, a seasonal rebound in garments and holiday travel was partly offset by declines across fuel and urban transport, owing to a temporary reduction in the fuel excise tax and public transport subsidies.
- Looking ahead to the May data, we expect headline CPI to fall 0.4%mom, which would leave year-over-year inflation unchanged at 4.2%yoy. In underlying terms, we expect monthly trimmed mean CPI to increase 0.3%mom, taking the year-over-year rate 10bp higher to 3.5%yoy. We flag a higher-than-usual degree of uncertainty in our forecasts this month.
- In New Zealand, monthly price data covering around 50% of the CPI basket remained unchanged in May. Compositionally, a decline in fuel and airfare prices was offset by rising food prices, particularly for restaurant meals where there have been some reports of fuel surcharges.

Australia

Australia's headline CPI increased by 0.4%mom in April, though year-over-year inflation decelerated 40bp to 4.2%yoy. Compositionally, a seasonal rebound in garments, domestic travel and international travel was partly offset by declines across automotive fuel and urban transport – owing to a temporary reduction in the fuel excise tax and public transport subsidies. Looking through the volatility in headline inflation, monthly trimmed mean rose 0.3%mom, with year-over-year growth accelerating 10bp to 3.4%yoy. In quarterly terms, our three-month-on-three-month trimmed mean measure eased 3bp to 0.84%qoq.

Looking ahead to May, we expect headline CPI to fall 0.4%mom, which would leave year-over-year inflation unchanged at 4.2%yoy. Compositionally, our forecast reflects a decline in automotive fuel (GSe: -12.5%mom), alongside lower global crude oil prices, as well as a seasonal fall in domestic airfares (GSe: -7.2%mom) following the Easter holidays. We expect the indirect pass-through of higher fuel prices to intensify in May, particularly across new dwelling purchase (GSe: +0.9%mom), restaurant meals (GSe: +0.7%mom) and takeaway meals (GSe: +0.7%mom).

In underlying terms, we expect monthly trimmed mean CPI to increase 0.3%mom, taking the year-over-year rate 10bp higher to 3.5%yoy. Our forecasts are consistent with a 0.88%qoq increase in our preferred three-month-on-three-month trimmed mean measure.

We flag a higher-than-usual degree of uncertainty in this month's forecasts for two reasons: (i) the heightened volatility in fuel prices stemming from both the excise tax reduction and movements in global oil prices; and (ii) May will be the first month in which international airfares reflect the impact of the conflict, as these prices are collected two months in advance.

Automotive fuel

Timely data from the Australia Institute of Petroleum suggest gasoline and diesel prices fell sharply in May, alongside lower global oil prices and the earlier temporary 3-month reduction of the excise tax ([Exhibit 3](#)).

We expect automotive fuel in the official CPI data to fall 12.5%mom in May.

Exhibit 3: Diesel and gasoline prices fell in May

Materials and chemical costs

The number of price rises announced by key plumbing and trade material suppliers continue to trend upwards, with the average price increase and number of price increases exceeding the post-COVID peak ([Exhibit 4](#)). Prices for fertiliser also remain somewhat elevated ([Exhibit 5](#)).

Exhibit 4: Key building supply companies are announcing a greater number of, and larger, price increases

Source: Reece, TradeLink, Goldman Sachs Global Investment Research

Exhibit 5: Fertiliser prices remain somewhat elevated

Source: Argus, Goldman Sachs Global Investment Research

Over time, we expect higher materials and chemical costs to pass through to higher consumer prices for food and housing, reflecting cost pressures faced by the agriculture and materials manufacturing industries ([Exhibit 6](#)).

Exhibit 6: Prices for food and housing are likely to be boosted by higher input costs

Airfares and holiday travel

We expect domestic travel & accommodation in the official CPI data to fall 7.2%mom in May. Alternative data on domestic airfares from the Bureau of Infrastructure and Transport Research Economics suggest prices fell a smaller 2.1%mom in April ([Exhibit 7](#)), although we acknowledge these data measure prices on the last Thursday of each month, whereas the official ABS measures prices more frequently throughout the month.

We expect international travel & accommodation prices to rise 4.7%mom. We note that price collection for international airfares occurs two months in advance, meaning that

May's data is the first to capture the impact of the conflict in the Middle East. Our forecast contrasts with the decline in international travel prices in the New Zealand already observed over May ([Exhibit 8](#)), possibly in part due to differences between the Australian and New Zealand collection methodologies.

Housing

Growth in SQM advertised rents picked up further in May, which will pass through to inflation in the stock of rents measured in the CPI data over time. The April CPI report showed a slight easing in rents inflation, while new dwelling inflation picked up further, reflecting the pass-through of fuel surcharges and higher material costs.

Looking ahead, we expect new dwelling inflation to accelerate further to 0.9%mom in May from higher input costs. We expect rents inflation to edge up to 0.4%mom.

Market services

We expect a slight acceleration in market services inflation in April, reflecting pass-through of higher oil prices. In particular, we expect restaurant meals and takeaway to each rise by 0.7%mom, alongside [reports of fuel surcharges](#) in the food and hospitality industry. We expect inflation across other market services to remain little changed.

Outside of fuel-related cost impacts, measures of labour tightness included in the RBA's indicator framework suggest conditions in the labour market are close to balance and not contributing excessively to inflation (Exhibit 11).

Inflation expectations

Measures of short-term inflation expectations remain well above the RBA's target band, but recently retraced from their peaks (Exhibit 12). Measures of long-term inflation expectations – which are more problematic for a central bank if they become unanchored – generally remain stable around the mid-point of the RBA's target band (Exhibit 13).

New Zealand

Selected prices covering around 50% of NZ's quarterly CPI basket were little changed in the month, but year-over-year inflation in these prices accelerated 70bp to 5.6%yoy. Excluding fuel, year-over-year inflation also increased 100bp to 3.0%yoy.

Compositionally, petrol (-3.8%mom) and diesel prices (-11.4%mom) fell alongside lower global energy prices. Domestic (-11.4%mom) and international fares (-5.5%mom)

also declined following a seasonal increase in April, while rents growth turned negative (-0.1% mom) for the second time this year. However, offsetting these declines was a material rise in food prices ($+1.0\%$ mom) driven by ready-to-eat food ($+0.6\%$ mom) and restaurant meals ($+0.7\%$ mom). The latter rose at its fastest pace since mid-2023 ([Exhibit 15](#)), possibly as a result of [fuel surcharges](#).

Elsewhere, business survey measures of selling prices remain elevated ([Exhibit 16](#)). Selling prices in the NZIER Quarterly Survey of Business Opinion rose to their highest level since 3Q2023. Measures of wage expectations are little changed at subdued levels, while businesses are reporting that finding skilled labour has become more difficult ([Exhibit 17](#)).

Short-term inflation expectations surveyed by the RBNZ rose sharply in 2Q2026, but long-term inflation expectations declined a little and remain around the midpoint of the RBNZ's target band ([Exhibit 18](#)).
