*Over the last 9–12 months, Axis has outperformed ICICI by a significant margin. The sharp pickup in growth has likely been the biggest driver, and Axis continues to build on that momentum, delivering ~19% YoY growth in 1Q27—comfortably ahead of peers such as HDFC and KMB and well above system growth. We highlight other factors underpinning this outperformance, including Axis's more optimal capital position, and explore whether ICICI too can pivot towards higher growth—a key trend to watch this quarter.*

**Axis's outperformance over ICICI:** Axis has seen a sharp re-rating, both in absolute terms and, more importantly, relative to ICICI over the last 3–4 quarters ([Exhibit 4](#), [Exhibit 5](#)). The stock has gained ~15% over the last year versus -1% for ICICI and, on a relative basis, now trades at a five-year-high valuation versus ICICI, albeit still below pre-COVID levels.

**Axis's choice of growth over margins:** We believe much of the outperformance can be attributed to Axis's stronger growth over the last few quarters ([Exhibit 1](#)–[Exhibit 3](#), [Exhibit 6](#)), particularly as the margin gap with ICICI has widened during this period. The RoA gap widened ([Exhibit 7](#)) and, more importantly, the PPOP-to-assets gap expanded by 40 bps over the last twelve months ([Exhibit 8](#)). The NII-to-assets gap also widened by 20 bps ([Exhibit 9](#)), suggesting that stronger growth has come at the expense of margins. Lower credit costs, improvement in CASA growth ([Exhibit 10](#)) and tighter opex growth have also helped, but growth remains the key differentiator.

**The quality gap persists:** While growth has been stronger at Axis, ICICI continues to lead on most measures of franchise quality—including deposit franchise strength, balance sheet quality, liquidity buffers, provision buffers and profitability ([Exhibit 11](#), [Exhibit 12](#)). However, in a benign environment with liquidity risks becoming less of a concern, the higher headline growth is getting rewarded.

### Can ICICI follow Axis?

- **No obvious balance sheet constraints:** There are no obvious balance sheet constraints holding back ICICI. Its LCR/LDR is stronger than peers, core deposit growth is higher, and its starting RoA is well above peers, making the slower growth somewhat puzzling ([link](#)).

- **Signs of an inflection in retail lending:** If the slower growth was largely driven by weakness in the higher-yielding retail (non-mortgage) segment, 4Q26 showed the first signs of a potential inflection for ICICI. However, growth in the segment remains well below that of Axis ([Exhibit 13](#)).

- **Higher capital remains a semi-structural drag:** If a higher threshold for RoA/RoE is driving slower growth, it could take much longer for ICICI to return to industry-leading growth rates. Its higher capital levels require higher RoAs to sustain similar RoE levels. Axis, meanwhile, with a more optimal capital position, can continue delivering RoEs comparable to larger banks despite operating with meaningfully lower RoAs ([Exhibit 14](#), [Exhibit 15](#)).

This will be a key trend to watch during the upcoming quarterly results. While few would dispute the franchise quality gap between ICICI and Axis, a continuation of recent trends could allow Axis to extend its outperformance versus ICICI.
