

市场最新观点汇总

全球市场主线从需求侧叙事转向供给侧结构性分化，储能、铜、稀土等板块的定价逻辑正在重塑。

一页摘要

- 全球储能产业正经历供给端结构性重组，而非简单的需求回暖，企业从规模竞赛转向成本与场景的双重分化。
- 电池行业当前周期与2021-2022年超级周期本质不同，盈利可持续性而非价格弹性成为关键，市场焦点应从价格修复转向出货量驱动的现金流增长。
- 铜价核心支撑来自非美市场供给收紧与美国进口激增导致的库存地理错配，而非AI等需求故事，矿山复产延迟是未来两年关键变量。
- G10消费者健康度分化明显，北美实际收入增长放缓至历史低位，消费韧性正从收入驱动转向储蓄消耗，欧元区相对稳健。
- 中东局势缓和情景下，市场低估了南非等具备高油价负相关、低利率敏感与超卖三重特征市场的反弹弹性。
- 人民币中间价模型显示政策当局正系统性引入模型框架之外的考量因素，市场对汇率稳定诉求的定价尚不充分。
- 稀土磁材定价权正从上游氧化物向下游磁材环节转移，成本传导能力改善使磁材企业盈利模型发生结构性变化。

宏观与利率

G10消费者健康度分化加剧，北美实际收入增长放缓是核心信号，欧元区相对稳健，日本表现最佳。

- 美国消费者信心跌至历史冰点，实际收入增长已降至历史最低5%分位，能源价格上升正在侵蚀实际购买力。
- 美国消费韧性正从收入驱动转向储蓄消耗，储蓄率已降至2022年6月以来最低，预计未来几个月支出将放缓。
- 欧元区消费者健康度处于P65分位，劳动力市场仍紧张，资产负债表健康，是G10中最稳健的区域。
- 日本消费者健康度处于P50分位，基础工资增速仍超3%，劳动力市场接近历史低位，表现最佳。
- 加拿大是G10中最脆弱的节点，消费者健康度仅P30分位，实际收入增长处于P20低位，房价持续下跌。
- 英国消费者健康度偏弱（P40分位），劳动力市场疲软，消费者信心低迷。
- 澳大利亚消费者健康度处于中位（P50），但名义消费环比下滑，运输支出受中东局势影响。

AI/算力与储能

全球储能产业正经历供给端结构性重组，AI数据中心成为储能新引擎，但真正改变行业格局的是产能重新布局与技术路线切换。

- 美国AI数据中心正在成为储能新引擎，LG Energy Solution签下16亿美元大单，为DTE Energy供应6GWh储能电池，专门支持AI数据中心相关电网项目。

- 全球储能产业正从规模竞赛进入成本与场景的双重分化期，企业通过轻资产化策略（如LGES出售合资工厂资产）换取现金流与灵活性。

- 中国LFP材料与换电模式双线推进，天赐材料投资21亿元建LFP正极材料工厂，宁德时代在粤港澳大湾区启动轻型电卡换电网络。

- 换电模式从乘用车延伸到商用车，BaaS（电池即服务）在重卡领域开始落地，运营成本比柴油车低约50%。

- 电池行业当前周期与2021-2022年超级周期本质不同，价格弹性远小于上一轮，但盈利改善逻辑更健康，市场焦点应从价格修复转向出货量驱动的现金流增长。

Figure 1 - \- Range-bound trading in 2H26-1H27. This argues for a more range-bound trading approach for material names and tier-2 battery makers. In 2025, LFP cathode names such as Hunan Yuneng worked well as price-recovery trades, followed by separator names such as Yun

能源与大宗

铜价核心支撑来自非美市场供给收紧与美国进口激增导致的库存地理错配，稀土磁材定价权正从上游向下游转移。

- 铜价当前及未来两年的核心支撑来自非美市场供给持续低于预期，以及美国进口激增导致的全球铜库存地理错配。
- 2026年全球矿山供给预测被削减约35万吨，主要因印尼Grasberg和刚果金Kamoa-Kakula矿山复产慢于预期，预计要到2028年才能恢复满产。
- 非美市场铜供需缺口从此前6万吨/4万吨大幅上调至64万吨/17万吨，美国在囤铜，其他市场承受更紧的供应。
- 中国废铜产出同比下降12%，因增值税发票合规趋严，废铜替代精炼铜的能力受限，精炼铜供需弹性更低。
- 稀土磁材定价权正从上游稀土氧化物向下游磁材环节转移，金力永磁通过成本加成模式和客户锁价合同有效传导上游涨价压力。
- 2026年一季度氧化镨钕价格同比上涨约50%，而金力永磁毛利率反向扩张约6个百分点至22%，显示磁材行业盈利模型发生系统性改善。
- 稀土磁材需求增长亮点来自工业机器人（销售额同比增超80%）和电动重卡，电动车仍是主力但增速趋稳。

区域市场与地缘政治

中东局势缓和情景下，南非、希腊、波兰等具备高油价负相关、低利率敏感与超卖三重特征的市场反弹弹性最大。

- 中东局势缓和交易的核心逻辑不在能源，而在高油价负相关、低本地利率敏感与深度超卖三重特征的叠加效应。

- 南非是最大受益者，矿业（铂金、黄金）、金融（银行、保险）和消费（零售、日用品）板块反弹弹性最强。
- 希腊和波兰在缓和情景下也将显著受益，土耳其银行也在看多名单中。
- 沙特和东欧能源、化工、公用事业板块短期压力较大，但沙特中长期仍受油价高位支撑。
- 人民币中间价模型显示政策当局正系统性引入模型框架之外的考量因素，市场对汇率稳定诉求的定价尚不充分。
- 模型误差从2025年初的-1800个基点收窄至2026年4月的+600个基点，央行操作越来越可预测。

结语

综合来看，当前市场主线正从需求侧叙事转向供给侧结构性分化，储能、铜、稀土等板块的定价逻辑正在重塑，而G10消费者健康度的分化与地缘政治缓和情景下的区域市场机会，为投资者提供了多维度的观察视角。
