

市场最新观点汇总

中东供应链风险、AI资本开支扩散与消费分化是当前市场三大主线，投资者正从“AI主题”转向“AI落地”的ROI验证阶段。

一页摘要

- 中东供应链断裂对非石油商品的冲击被市场低估，其“数量出清”机制对实体经济的破坏力可能超过油价冲击。
- 中国城镇化2.0政策是长期结构性变量，通过公共服务覆盖释放1.7亿进城务工人员的消费潜力。
- 台湾市场定价已完全透支未来，盈利预期、估值、集中度风险均处于历史极值，动量驱动的上涨变得脆弱。
- 日本央行真正担心的是工资-物价螺旋的迟到风险，当前通胀压力已接近石油危机水平。
- AI资本开支正从半导体向更广泛的工业领域扩散，日本FA设备和欧洲功率半导体公司迎来结构性重估。
- 消费数据确认政策退潮后真实需求疲软，宠物食品和保健品是少数韧性赛道，美妆和家电承压。
- 全球战略石油储备释放将在7月骤降70%，原油市场面临供给缓冲垫突然变薄的考验。

宏观与利率

中东供应链风险、中国财政节奏与日本通胀粘性是当前宏观三大焦点，市场对非石油商品供给断点的定价不足。

- 中东非石油商品（化肥、氮气、甲醇等）供给中断对全球GDP的潜在拖累在极端假设下可达1.3%，经调整后仍有0.4%-0.5%，这一落差是最大不确定性来源。
- 四月中国财政收缩是节奏问题而非方向问题，基建支出大幅回落但民生支出仍有韧性，财政存款积累意味着下半年政策空间比市场预期的更稳。
- 日本央行行长植田和男将本轮油价冲击与1973年石油危机对比，指出当前劳动力短缺程度甚至超过70年代，工资-物价螺旋风险在2027年春斗中可能显现。
- 美联储主席沃什质疑核心PCE通胀指标的准确性，截尾均值PCE可能系统性低估真实通胀约48个基点，这增加了市场对降息时点的误判风险。
- 瑞士央行口头干预强硬但实际动作有限，日本财务省干预决心被高估，做多CHF/JPY的交易逻辑在于两国央行干预哲学的差异。
- 人民币中间价模型显示逆周期因子正在发挥作用，模型预测与官方定价之间的185个基点差值即是央行主动压住的贬值空间。

Exhibit 1 - Exhibit 1: Exports from the Middle East Account for a Large Share of Global Trade in Certain Key Industrial and Agricultural Inputs, Although Their Share of Global GDP is Smaller Middle East Goods Exports to RoW

Exhibit 2 - Exhibit 2: Commodity Prices Have Surged In Response to the Supply Shock Reported Price Increases Since Feb 27, 2026

Exhibit 3 - Exhibit 3: Crude Inventories Remain Above Historical Levels Despite Rapid Drawdowns; Our Rules of Thumb Capture the Growth Impact of Demand Destruction via Higher Prices

Exhibit 4 - Exhibit 4: A Complete Loss of Middle Eastern Crude Oil Supply Would Likely Lower Global GDP by 2% Effect of a 100% Loss of Middle East Oil Supply on GDP (Ghosh Model)

Exhibit 4 - Exhibit 5: Downstream GDP Exposure to Middle East Goods Supply Ranges from 0.3% in the US to Over 3% in India, Turkiye and South Korea Effect of a 100% Loss of Middle East Non-Oil Goods Supply on GDP (Ghosh Model)

Exhibit 6 - Exhibit 6: In an Extreme Scenario Where Goods from the Middle East Are Critical for Production and No Opportunities for Substitution Exist, the Growth Impact Would Be Severe Effect of a 100% Loss of Middle East Non-Oil Goods Supp

Exhibit 7 - Exhibit 7: The Growth Impact Would Be Much Smaller If Goods That Account for a Trivial Share of Overall Inputs are Non-Critical for Production

Exhibit 8 - Exhibit 8: Diverting Supply to Higher Value-Added Industries Could Reduce the Global GDP Hit from \$10\%\$ to Less than \$1\%\$ Effect of a 100% Loss of Middle East Non-Oil Goods Supply on GDP, by Reallocation Scenario

Exhibit 9 - Exhibit 9: Even a Small Degree of Substitutability Between Imports Would Dampen the GDP Hit Substantially

Exhibit 3 - To assess the magnitude of the potential growth hit after accounting for these margins of adjustment, we make reasonable assumptions on the bottleneck threshold, ease of reallocation and substitutability of inputs, guided by the academic literature and our own

Figure 4 - Figure 4: Unit labor costs (ULC) during the previous oil shocks

The graph displays two data series over time from 1965 to 2025. The Y-axis represents percentage (%), ranging from -4 to 16. The X-axis represents years, with major ticks every 5 years. The dark blue line represents 'Nominal growth (4-year average)', which shows significant volatility, peaking around 14% in the mid-1970s and then generally declining. The light blue line represents the 'Policy rate', which is more stable, peaking around 9% in the mid-1970s and then generally declining. Two red dashed ovals highlight periods of high nominal growth and high policy rate in the 1970s and early 1980s.

Year	Nominal growth (4-year average) (%)	Policy rate (%)
1965	10	6
1970	13	6
1975	14	9
1980	8	9
1985	4	4
1990	5	6
1995	1	1
2000	-1	0
2005	0	0
2010	-2	0
2015	2	0
2020	0	0
2025	3	1

AI/算力与科技硬件

AI投资已从“讲故事”进入“算ROI”阶段，算力基础设施的供给侧瓶颈（ABF基板、MLCC、功率半导体）成为定价权再分配的关键。

- ABF基板市场将在2027年进入全面短缺状态，需求端22%的CAGR远超供给端12%，CPU的“文艺复兴”才是需求爆发的真正推手，GPU只是锦上添花。
- MLCC周期由AI驱动，4月日本出口量价齐升确认周期仍在加速，技术门槛提升和供应商格局固化意味着本轮利润分配将与过去截然不同。
- 英飞凌和意法半导体正被重新定价，数据中心功率半导体单机柜价值量上调，GaN技术在中间总线转换环节的渗透成为关键增量。
- 超大规模云厂商每GW新增算力容量可带来110-140亿美元增量收入，市场对Google Cloud 2027年的收入预期可能偏保守。
- Salesforce和Snowflake财报的反差揭示市场逻辑转变：数据库和记录系统这类为AI提供上下文的基础设施将因AI普及而更重要。
- 零售投资者正从情绪驱动转向主题驱动，资金高度集中于AI、存储芯片和量子计算，且个股表现显著跑赢基准。

能源与大宗商品

原油市场的真正拐点不在价格，而在7月战略储备的断崖式下降；巴西糖市的核心变量是乙醇对定价权的争夺。

- 全球战略石油储备释放将在7月从每天250万桶骤降至70万桶，降幅超过70%，这是基于已签署合同和各国政府明确承诺的排期推算。
- 巴西中南部2026/27榨季开局压榨量创纪录，但糖醇比从45.2%骤降至38.2%，糖厂主动选择生产乙醇，因乙醇对糖的溢价已具吸引力。
- 巴西政府计划将乙醇掺混比例从30%提升至32%，预计每年消化约8-9亿升乙醇，这将成为糖价的间接支撑。
- 光伏产业链多晶硅价格止跌，但这是供给端在极端亏损下的被动收缩，而非需求复苏，当前价格均衡脆弱。
- EVA树脂价格单周暴跌18.5%，与下游备货节奏放缓有关，辅材端的分化信号值得关注。

地产与消费

中国消费复苏节奏慢于预期，宠物食品和保健品是少数韧性赛道；香港地产复苏从“普涨”转向“结构性分化”。

- 四月社会消费品零售总额同比仅增0.2%，五因子消费活动Z-Score继续下行，以旧换新政策边际效果递减，就业市场疲软从预期传导至实际支出。

- 宠物食品和保健品是当前最具韧性的结构性赛道，宠物食品量价齐升，保健品价格驱动增长，两者均具备连续性。

-

美妆和白色家电线上销售大幅下滑，抖音作为增量引擎的角色强化，但品牌对单一平台的依赖风险上升。

- 香港住宅市场复苏逻辑已从“利率驱动”切换为“库存驱动”，库存消化周期从23.5个月降至11.7个月。

- 香港甲级写字楼租金分化剧烈，中环核心区同比涨9.2%，港岛东却跌10.6%，灵活办公空间需求占比达18%。
- 中国车企出海进入结构性分化期，比亚迪在巴西和澳大利亚逆势增长，吉利巴西销量环比暴增210%。

中国车企出海，市场真正低估的不是总量，而是结构性份额的再分配; [R023] 香港地产的真正拐点不在住宅，而在写字楼的“结构性分叉”

区域市场与风险偏好

台湾市场定价已完全透支未来，日本FA设备股和欧洲半导体重估的核心是供给侧定价权的重新分配。

- 台湾在MSCI新兴市场指数权重达25%，全球基金配置首次超过中国，但盈利预期、估值、集中度风险均处于历史极值，动量上涨脆弱。

- 日本FA设备股新一轮峰值周期已确认，但个股分化将比上一轮更剧烈，供给能力和资本配置政策清晰度成为核心变量。

- 日本机器人出口数据显示中国需求结构分化，AI红利只惠及小型六轴或SCARA机器人厂商，传统工业机器人龙头失去增长动能。

- 欧洲功率半导体公司英飞凌和意法半导体正脱离传统周期框架，数据中心和光学/低轨卫星业务获得结构性增长溢价。

- 全球市场结构高度集中，标普500仅4%成份股创新高，与2000年互联网泡沫顶峰相似，BofA牛熊指标已触发卖出信号。

- 泡沫破灭后六个月内资产轮动规律显示，赢家往往是泡沫最后阶段被羞辱的防御型板块。

医疗与医药

中国医药投资进入“选择性等待”阶段，数字健康2.0的单位经济模型展现规模化杠杆效应，日本低药价重塑全球药企竞争版图。

- 中国CDMO领域投资者情绪从“整体看多”退至“选择性聚焦”，2季度业绩成为重建信心的关键分水岭，政策风险对短期基本面影响总体可控。

- AI在药物研发中最确定的价值在于早期发现阶段的生产力提升，数据本身正在商品化，系统整合与基准测试能力才是真正护城河。

- 数字健康公司Hinge Health和Omada

Health在自保雇主市场渗透率仅14-18%，远未触顶，单位经济模型已展现规模化杠杆效应。

- 澳大利亚医疗科技板块的下跌是全球性板块重定价，与2010-2013年周期相似，资本回报计划重启可能是反转的关键。

- 日本药价仅为美国的22%，政府全权控制下的“成本优先”机制正倒逼本土药企加速全球化，同时让患者面临创新药物可及性风险。

结语

综合来看，市场正处于从AI主题驱动向基本面验证切换的关键阶段，供给侧的结构性变化（ABF基板、MLCC、功率半导体、储能）正在重塑多个行业的定价权分配，而宏观层面的中东供应链风险和消费疲软则构成下行压力。投资者需聚焦于那些能够在供给紧张环境中将规模转化为定价权的公司，同时警惕估值已完全透支未来的拥挤交易。
