China Battery & Materials

Two Battery Cycles: Lessons learned and investment strategy for 2H26-2027

We published a comprehensive [100-page deep-dive](#) on 30 May, analyzing the China battery sector's two major upcycles. The China battery sector is transitioning from the 2021-22 supercycle – driven by price hikes and aggressive expansion – to a more selective recovery phase. In this cycle, we recommend investors shift focus from 'price hike expectations' to 'volume-led cashflow and earnings delivery'. We advocate a range-bound trading approach for material and tier-2 battery makers: buy on weakness, take profit when expectations become crowded. In our [30-May report](#), we **tactically upgraded CALB and Putailai to Overweight** on attractive valuations (12-14x) and >40% volume-driven earnings growth for 2027E, without relying on price or unit profit increases. **CATL remains our top pick and core holding**, given its unmatched record of stable, through-cycle earnings growth – the sector's only true compounder.

- **2021-22 supercycle vs 2025-current recovery cycle:** The 2021-22 battery cycle was a true supercycle, driven by near-zero interest rates, rapid China EV penetration, aggressive capacity expansion, strong fund flows, and extreme raw-material price inflation. By contrast, the current cycle is more of a recovery cycle: demand is more diversified across EV and ESS, industry participants are more disciplined on capacity, ASP recovery is meaningful but far smaller than the last cycle, and valuations remain much lower. As a result, we believe the current cycle is less likely to deliver a broad one-way sector rerating and more likely to reward companies with sustainable earnings growth, strong utilization, and cash-flow resilience.
- **Lessons learned from the last cycle:** Stock prices peaked well ahead of ASP or earnings highs, as the market rapidly priced in expectations of future price increases. For example, **Yunnan Energy's** share price reached its peak in Sep-Oct 2021, preceding or coinciding with the initial rebound in industry separator selling prices from their trough.
- **Investment focus likely to shift from ASP recovery to profit delivery.** In the current battery cycle, we see the investment focus shifting from ASP recovery to volume-led earnings durability. The first phase of the rally from 2H25 to early 2026 was driven largely by a selling-price recovery across batteries and materials. However, with price recovery now increasingly embedded in market expectations and industry players starting to accelerate capacity expansion again, the next phase of equity performance is likely to be more selective, in our view. We expect investors to focus less on further ASP upside and more on whether companies can deliver stable cashflow and profit growth through volume.

- **Range-bound trading in 2H26-1H27.** This argues for a more range-bound trading approach for material names and tier-2 battery makers. In 2025, LFP cathode names such as Hunan Yuneng worked well as price-recovery trades, followed by separator names such as Yunnan Energy in 1H26 as ASP recovery and utilization improvement became more visible. Going forward, however, we would be more disciplined in buying these names on weakness and taking profit when expectations become crowded, especially where earnings recovery depends on further price increases or processing-fee expansion. For lower-valuation laggards, such as Putailai or selected tier-2 battery makers such as CALB, the opportunity may come from volume growth and operating leverage rather than ASP beta, but these should still be treated as cyclical trades rather than long-duration compounders, in our view.
- **CATL the only core holding that can exhibit outperformance through cycles.** By contrast, we believe CATL remains the core long-term holding in the sector. It is the only major battery supply-chain company that has demonstrated stable and solid earnings growth through the cycle, supported by scale, technology leadership, stronger bargaining power, stable unit profitability and superior cash-flow generation. While materials and tier-2 battery names may offer better tactical upside at certain points in the cycle, their earnings are more sensitive to pricing, utilization and capacity expectations. CATL, in our view, deserves to be held through the cycle as the sector's quality anchor, while the rest of the supply chain should be traded more actively around valuation, ASP expectations and EPS revision momentum.

Battery & materials ASP index in the two cycles vs stock price peak time (ASP bottom prices index to 100)

Figure 4: Artificial graphite anode: Price Index vs. No. of months of price increase in the last upcycle (2021-2022), no price hikes yet in 2025-26

Figure 5: Separator: Price Index vs. No. of months of price increase in the two upcycles (2021-2022 vs. 2025-now)

Figure 6: LiPF6: Price Index vs. No. of months of price increase in the two upcycles (2020-2022 vs. 2025-now)

The two battery cycles: Similarities, differences, and valuation implications

2021-22 supercycle vs. 2025-current recovery cycle

Table 3 compares the 2021-22 battery supercycle with the 2025-current recovery cycle, and we believe the current cycle should not be valued as a simple repeat of the last one. The 2021-22 cycle was driven by a powerful combination of near-zero global interest rates, rapid rise in EV penetration, aggressive capacity expansion, large capital inflows, and extreme raw-material price inflation. By contrast, the 2025-current cycle is supported by recovering utilization, more diversified demand drivers, and renewed pricing momentum, but it is occurring in a relatively more disciplined capital-market and industry environment. In the last cycle, battery stocks peaked in 2H21 at roughly 40-80x 2022E P/E; in the current cycle, only CATL amongst the top players have exceeded prior share-price peaks, while most remain 30-80% below their 2021 highs and trade mostly at 15-25x 2027E P/E.

Demand drivers: Single factor in 2022 vs multiple drivers in 2026

Demand is also structurally different. The 2021-22 cycle was mainly driven by China passenger-vehicle EV demand which contributed to ~45% of the demand mix in 2022. In 2026, demand is more diversified, with China passenger EV now only contributing to 24% of total mix and ESS overall is expected to make up >40% of demand (up from <20% in 2022). The importance of EU/EV exports and China commercial EV also increased. This diversification is positive for earnings resilience because the sector is no longer dependent on a single China PV EV adoption curve. However, it also means the investment narrative is less simple and less powerful than the last cycle's "EV penetration explosion" story. The current cycle is more about multiple demand engines – EV, commercial vehicles, China ESS, and overseas ESS – rather than one dominant driver.

Policy changes: multiple policy to watch out for

Policy support has also changed in character. In the last cycle, China EV subsidies were only phased out from January 2023. In the current cycle, there may be several policy changes: China EV trade-in subsidies were lowered from January 2026, purchase-tax subsidies were halved for passenger and commercial vehicles, battery export rebates are being reduced, and there is a potential battery consumption-tax increase under discussion. At the same time, nationwide ESS subsidies were clarified in early 2026, but China's ESS target is set for 2027, raising the risk of a potential decline in ESS installations in 2028, which could translate into battery-shipment pressure in 2027. This suggests that investors should watch not only near-term demand strength but also the durability of 2027-28 growth.

Government attitude on capacity expansion: from encouragement to disciplined

On the supply side, the contrast is equally important. During 2021-22, local governments actively encouraged NEV and battery capacity expansion with subsidies and support. In the current cycle, central-government scrutiny has increased under broader "anti-involution" and fair-competition policies aimed at curbing irrational price competition, overcapacity, and preferential local support. Local governments also have less fiscal bandwidth to provide direct subsidies, although they may still support strategic players indirectly through equity investments, industrial funds, or government-backed consolidation vehicles. This creates a more disciplined supply environment, but it does not eliminate overcapacity risk. Current capacity expansion is more concentrated among tier-1 and tier-2 players, with fewer new entrants, improved capex efficiency, and shorter capacity lead times.

Capital raising: more concentrated at battery makers, particularly CATL

Capital raising also shows a different pattern. In 2021-22, A/H placements, IPOs, and GDR issuance totaled around Rmb150bn from top industry players, with roughly half raised by battery makers and around 20% by upstream raw-material companies. In the current cycle, H-share IPOs and A/H-share placements have already raised more than Rmb105bn, but around 80% of the capital has come from battery makers, with very little from upstream raw-material suppliers. This reinforces the idea that bargaining power and investment focus have shifted toward battery cell makers, especially those with scale, utilization, technology, and cash-flow advantages. For example, CATL has raised Rmb77bn in this cycle, representing around 70% of total capital raised across the supply chain so far. This compares with Rmb45bn in the previous cycle, or roughly 30% of the total.

ASP gains are milder, with prices still 40–80% below the prior peak

Pricing behavior is another major difference. The last cycle saw extreme inflation in upstream and midstream materials: lithium carbonate rose by more than 1,300%, LiPF₆ by more than 670%, LFP cathode by more than 390%, and LFP cathode processing fees by more than 70%. In the current cycle, price increases are meaningful but much smaller: lithium carbonate is up more than 130% from the 2H25 bottom, LiPF₆ is up 97%, LFP cathode is up more than 80%, but cathode processing fees are up only 16%; wet separator is up 28%, while graphite anode has seen no price upcycle. Importantly, the latest prices are still 40-80% below the last-cycle peak, which limits the case for simply extrapolating 2022 peak earnings into the current cycle.

Profit distribution shifts from resources to downstream; CATL stands out as the only through-cycle winner

Profit distribution has shifted from upstream/resource-led earnings in the last cycle to battery-cell-led earnings in the current cycle. In the 2021-22 supercycle, the most dramatic profit pool expansion was concentrated in upstream raw materials, especially lithium, as shown by Ganfeng-A's peak quarterly net profit of Rmb6.1bn in 4Q22, far above most midstream material and battery makers. By contrast, in the current cycle, most supply-chain companies are still meaningfully below their last-cycle profit peaks by 20-80%. Only select names have recovered to or surpassed prior peak profitability. More importantly, CATL stands out as the only major name that delivered stable and growing earnings through the cycle, highlighting that industry profit distribution has shifted toward leading battery cell makers with scale, utilization, bargaining power, and stronger cash-flow resilience.

Market concentration ratio declined

Battery and materials industry concentration has generally declined versus the last cycle, suggesting that pricing power is more fragmented despite improving utilization. The most notably declined are in wet separator (CR3 and CR5 ratio reduced by 10ppt/15ppt), and to a lesser extent in EV/ESS batteries. Overall, although the current cycle has fewer new entrants and more disciplined capacity expansion, lower concentration in several segments means investors should be selective and focus on companies with real cost, technology, customer, and utilization advantages rather than assuming broad-based pricing power across the supply chain.

PE expansion in 2021-22 vs. earnings recovery in 2025-26

The macro backdrop is one of the most important differences. In 2021, Fed funds were still near zero at around 0.25%, supporting long-duration growth assets and allowing investors to pay high multiples for battery supply-chain growth. In the current cycle, Fed funds are around 3.75%, and while J.P. Morgan expects the first rate hike only in 3Q27, market pricing has begun to reflect a higher probability of an earlier move by late 2026 or early 2027. This matters because the current cycle has less room for broad multiple expansion than the 2021-22 period, in our view. Equity performance is therefore likely to depend more on earnings upgrades, utilization, and cash-flow quality rather than on a return to the prior cycle's valuation extremes.

Sustained EPS recovery more important than multiple expansion in this cycle

We believe the valuation implication is clear: the 2025-current cycle should be valued as a selective recovery cycle, not a repeat of the 2021-22 supercycle. Demand is healthier and more diversified, utilization has improved, and pricing has recovered, but valuation ceilings should be lower because interest rates are higher, investors are more cautious, capacity lead times are shorter, and customers are tougher in negotiations. We believe the right approach is therefore to reward companies with sustained utilization, stable unit profitability, stronger cash flow, and better bargaining power – such as leading battery cell makers and selectively positioned material suppliers – while applying more conservative multiples to segments where price increases do not translate into durable margin recovery.

Table 1: Battery and material prices in 2020-2023 cycles

		Last upcycle in 2020-2023						
	Unit	Bottom Time	Bottom Price	Peak Time	Cycle last (No of Months)	Peak Price	Absolute ASP changes	% ASP changes
Battery cell

Table 5: Comparison of 2021-22 vs. 2025-current battery cycles

	2021-2022 super cycle	2025-current recovery cycle
Macro environment		
Fed interest expectations	Fed funds were still near zero (0.25%) by end-21. JPMorgan expected first hike in June 2022 and quarterly hikes afterward. Actual first rate hike happened in Mar-2022.	Fed fund rates at 3.75% currently. JPMorgan expect the first rate hike in 3Q27, but recognize the risk of an earlier move has increased. Market pricing now reflects a higher probability of a hike by late 2026 or early 2027
China market index	CSI300 peaked at 5342 in Jan-2021	CSI300 recent peak at 5000 on 13-May; JPMorgan expects CSI300 at 5200 by end-26 (6% increase vs. latest)
Fund flows	Massive fund flows out of China assets	No major foreign inflow before 2026 and do not expect major foreign flows in/out in 2H26
Battery sector – stock prices & valuation	Stock prices peaked at 2H2021 with valuations at 40-80x 2022E PER .	Only select stocks seeing stock price higher than last peak as of 28-May 2026, e.g. CATL (+12%). Most stocks are still 30-80% below last peak in 2021. Valuation mostly at 15-25x 2027 PER.
Battery sector - demand		
Subsidy policy changes	China EV subsidy phased out from Jan-2023	- China EV trade-in subsidy lowered from Jan-2026; purchase tax subsidy halved (PV&CV) from Jan-26 - China battery export rebate reduced by 3% from Apr-26 then 6% from Jan-27 - Potential increase in battery consumption tax by 2% (TBC) - EU EV subsidies: some countries announced fixed subsidy budget - Nation-wide ESS subsidies clarified in early-26, local policy to follow - China ESS target set at 2027 -> a potential decline of ESS installation in 2028 (translating to battery shipment in 2027)?
Demand driver	Mainly driven by China PV EV 2022 demand breakdown: - EV: China PV 45% - EV: EU/RoW 18% - EV: China CV 5% - ESS: China 11% - ESS: ex-China 8%	More diversified demand drivers 2026 demand breakdown - EV: China PV 24% - EV: EU/RoW 19% - EV: China CV 7% - ESS: China 19% - ESS: ex-China 23%
Battery sector- supply		
Gov't policy on capacity expansion	Local gov't encourages capacity expansion in NEV / battery sector, with subsidies and supports	Central gov't increasing scrutiny of capacity expansion, in line with broader "anti-involution" and fair-competition policies aimed at curbing irrational price competition, overcapacity, and preferential local support for specific industries. Local gov'ts have less fiscal bandwidth to provide direct subsidies, and such subsidies are likely to face greater policy scrutiny. However, local authorities may continue supporting strategic players through less direct channels, including equity investments, industrial funds, or government-backed consolidation vehicles.
Capacity raising activities	A/H placement and IPO + GDR issuance totaling ~Rmb150bn from industry top players. Around half of capital raised by battery makers and ~20% by upstream raw materials.	H-shr IPO and A/H-shr placement, totaling >Rmb105bn so far (with capital raising amount not yet announced for many deals). ~80% of capital raised by battery makers and very little by upstream raw material suppliers.

China bank borrow rates	4.6% in 2H21, down to 4% in end-2021	~3.1%
Capacity expansion	Everyone and many new entrants	More concentrated among the tier-1 and tier-2 players, little new entrants. Capex efficiency improved (less capital needed for the same output) and capacity lead time shortened.
Market concentration ratio	2021 market concentration ratio EV battery: CR3 67%; CR5 81% ESS battery: CR3 53%; CR5 65% Wet separator: CR3 76%; CR5 89% Electrolyte: CR3 59%; CR5 70% Anode: CR3 54%; CR5 73% LFP cathode: CR3 51%; CR5 67%	2025 market concentration ratio slightly reduced vs. 2021 EV battery: CR3 65%; CR5 75% ESS battery: CR3 46%; CR5 64% Wet separator: CR3 66%; CR5 75% Electrolyte: CR3 59%; CR5 70% Anode: CR3 51%; CR5 65% LFP cathode: CR3 50%; CR5 64%
Battery price and profit		
Battery ASP hikes	From 2020-2021 bottom to 2022-23 peak: Lithium carbonate: >1300% LiPF6: >670% LFP cathode: >390% Cathode processing fee: >70% Wet separator: +23% Graphite anode: +19% Battery (NCM): +40% Battery (LFP): +60%	From 2H25 bottom to latest or recent peak: Lithium carbonate: >130% (160% at peak) LiPF6: +97% (195% at peak) LFP cathode: >80% Cathode processing fee: +16% Wet separator: +28% Graphite anode: no changes Battery (NCM): +8% Battery (LFP): +17-20%
Battery sector profits	- Most dramatic profit pool expansion was concentrated in upstream raw materials, far above most midstream material and battery makers. - CATL stands out as the only major name that delivered stable and growing earnings through the cycle	Latest prices are still 40-80% below last peak - Profit distribution has shifted to battery-cell-led earnings in the current cycle - Most supply-chain companies are still meaningfully below their last-cycle profit peaks by 20-80%. Only select names have recovered to or surpassed prior peak profitability.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to

those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: Wen, Rebecca Y: CALB (3931.HK), CATL - A (300750.SZ), CATL - H (3750.HK), Dynanonic - A (300769.SZ), EVE Energy (300014.SZ), Fuyao Glass - A (600660.SS), Fuyao Glass - H (3606.HK), Gotion High-Tech (002074.SZ), Huayu (600741.SS), Hunan Yuneng - A (301358.SZ), Minth (0425.HK), Nexteer (1316.HK), Ningbo Joyson (600699.SS), Ningbo Tuopu (601689.SS), Putailai (603659.SS), Ronbay - A (688005.SS), Wuxi Lead - A (300450.SZ), Wuxi Lead - H (470.HK), Yunnan Energy (002812.SZ)

J.P. Morgan Equity Research Ratings Distribution, as of April 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	51%	37%	12%
IB clients**	83%	79%	74%
JPMS Equity Research Coverage*	49%	39%	13%
IB clients**	94%	93%	85%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this

report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA’s policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: [J.P. Morgan EMEA - Research Independence Policy](#).

U.S.: J.P. Morgan Securities LLC (“JPMS”) is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to

certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
