Weekly Stock Up/Stock Down: Our 3 biggest movers of the week

Stock Up: INCY	Stock Up: SLN	Stock Down: CGEM
Rating: EW PT: \$103 % Move: +11% 	Rating: OW PT: \$25 % Move: +8% 	Rating: OW PT: \$30 % Move: -16% 
Recap: Incyte announced on Monday that it entered into a definitive agreement to acquire Vega Therapeutics, a subsidiary of Star Therapeutics, for \$1.25B upfront and will be eligible to receive up to \$750M in sales-based milestones, bringing the total potential transaction value to ~\$2.0B. The acquisition would add VGA039, a subcutaneous monoclonal antibody in Ph3 development for von Willebrand disease (VWD), the most common inherited bleeding disorder.	Recap: At the European Hematology Association (EHA) 2026 Annual Meeting (Stockholm, June 11–14), updated results from the Phase 1 PV study demonstrated meaningful improvements in patients' quality of life, while post-study follow-up confirmed a durable effect in reducing the need for phlebotomies. New analyses showed improvements in MPN-10 total symptom scores in most patients, including clinically relevant PV symptoms such as fatigue, pruritus (itching), and bone pain.	Recap: Cullinan (hosted an Immunology Day (June 10) to highlight the CD19xCD3 TCE CLN-978 data in SLE and BCMaXCD3 TCE RA (including initial multi-dose data in SLE), and early clinical velinotamig data. The EULAR dataset (~30 RA/SLE patients as of data cutoff) demonstrated clear on mechanism activity: peripheral B cells were >80% depleted in ~82% of patients, with half of patients at ≥20µg achieving undetectable B cells. The safety profile was favorable, featuring mostly Gr1 CRS events confined to the initial 10µg step up dose, just one Gr3 CRS at 45 µg (leading the company to halt that dose cohort), and no ICANS (neurotoxicity) reported. Early efficacy signals were encouraging: ~70% of patients showed meaningful disease improvement within weeks of a single treatment, including ~71% of SLE patients with ≥4 point SLEDAI score reductions (five achieving formal remission) and 7/9 RA patients with clinical improvement (two reaching DAS28 ESR remission in heavily refractory RA). Immunology Day discussions reinforced these findings and noted initial multi dose regimen results (e.g., early RA patients on a 20µg weekly schedule also saw responses) while framing how CGEM's portfolio aims to deliver short course "immune reset" therapies. Mgmt. highlighted that CLN 978 serves as an anchor for B cell mediated diseases (RA, SLE), and velinotamig is being developed in parallel to target plasma cell-driven diseases (pathogenic autoantibody conditions) as a complementary approach.
Our View: Management estimates potential annual net price in the ~\$500K+ range for a \$3.5B–\$5B TAM in severe VWD for VGA03 and estimates peak sales potential of ~\$1B+ and that the transaction will be accretive to growth post-2029, a key timepoint given the impending Jakafi LOE. Positive mgmt tone at a competitor conference and buy-side positioning have been noted as well.	Our View: We believe updated data further confirm the best-in-class potential of divesiran and increase our confidence in the less frequent Q12W dosing cohort, supporting even greater differentiation. Ph2 SANRECO data is on track for August, which we expect to be positive and unlock substantial upside.	Our View: We view CLN 978's emerging profile as validating the mechanism in SLE and RA, with compelling early efficacy (deep B cell clearance driving clinical improvements) and manageable safety that together meet our key initial benchmarks. In our view, the initial EULAR results aligned with expectations (both B cell depletion depth and tolerability cleared the proof of concept bar, with no red flags) and support CLN 978 as a potentially best in class CD19 TCE for autoimmune. We think confirmation of the immune-reset potential and durability of response remains the crux of investor focus. KOL commentary emphasized that ~3-6 months of sustained B cell depletion (treatment free remission) is a key threshold for an immune reset effect, correlating with markedly better outcomes in autoimmune disease. While the current data are encouraging, we expect upcoming follow up disclosures (including longer term data in 2H26) to be pivotal in refining expectations around the therapeutic window and durability.

BioPharma M&A Coming Into Focus

BioPharma M&A Deals Announced in 2025 - 2026

Capital Markets: M&A

Need for M&A

Outside of the interest rate outlook, we believe there remains a **fundamental need for SMID Cap biotech M&A**, which is driven by the patent expirations that the large cap Biopharma companies are expected to face at the end of this decade

Discount Rate Impact

The need for M&A has been underscored by larger deals undertaken by multiple companies and others across the industry remaining active in bolt-ons, even during the higher rate regime of 2022-2023.

While the trend of M&A in life sciences has generally been positive over time, we observe a particular pick-up in the timeframes which coincided with rate lowering regimes.

Key Observations:

- Within Morgan Stanley's SMID cap biotech coverage universe, ~50% of pre-commercial biotech companies have >2 years cash on hand, while many (22/50; 44%) have 1-2 years of cash, and 4/50 (8%) have less than 1 year of cash and may need to raise capital more imminently.

Important Notes:

- Cash runways were estimated by usage of 1) Company guidance ("Guidance"), 2) Morgan Stanley models ("Estimate"), or 3) "Calculations" as outlined below.
- For all companies outside of CMPS and EVMN for which "Calculation" was used, methodology for determining cash runway was a simple formula of 3Q25 cash/FY24 cash used in operations.
- Cash balances reflect the most recently reported financial disclosures.

Important Notes:

- Cash runways were estimated by usage of 1) Company guidance ("Guidance"), 2) Morgan Stanley models ("Estimate"), or 3) "Calculations" as outlined below.
- For all companies outside of CMPS and EVMN for which "Calculation" was used, methodology for determining cash runway was a simple formula of 3Q25 cash/FY24 cash used in operations.
- Cash balances reflect the most recently reported financial disclosures.

1) Sharp Divergence in High-Beta SMID Biotech (HF buyers vs MF sellers)

Clear pattern: **HFs aggressively adding risk**, MFs de-risking.

Examples: i) **AXSM**: HF +4–17% across horizons vs MF-17% to -97% ii) **BBIO**: HF +11–33% vs MF-16% to -18%; iii) **BMRN**: HF +20% (3M) vs MF-7% to -25%

HFs leaning into alpha/risk; MFs reducing exposure to volatile names, likely driven by drawdown sensitivity and liquidity preference.

2) Strong Mutual Fund Buying in Earlier-Stage / Turnaround Names (Opposite of HFs)

MFs accumulating beaten-down or speculative assets, often where HFs are neutral/negative: i) **VKTX**: MF +21% / +34% / +61% vs HF-11% to -31%; ii) **ZNTL**: MF +140%+ across horizons vs HF consistently negative; iii) **CRVS**: MF +62% / +71% / +155% vs HF-57% to -193%

MFs appear to be adding long-duration optionality, potentially averaging into dislocations vs HF tactical trading.

3) Consensus Longs (Both HF and MF Adding)

High-conviction overlap is rare but meaningful: i) **KYTX**: HF +165–280%, MF +88–136%; ii) **ABSI**: HF +60%+, MF +31–42%; iii) **IVVD**: HF +67%–302%, MF +133%–900%+; iv) **NRIX**: Positive across both cohorts

These represent crowded “beta to innovation” winners, likely tied to platform/technology optimism or recent catalysts.

4) Consensus Shorts / De-risking (Both Selling)

True agreement on exits is also limited but present: i) ARGX: Both reducing exposure (HF -25% to -31%, MF negative across horizons); ii) ARQT, BCYC: Both consistently negative Interpretation: These likely reflect either post-peak positioning unwind or fading conviction after catalyst cycles.

5) Hedge Funds React More Tactically to Catalysts

HF's show short-term (3M) positioning shifts not mirrored by MF's: i) ONC (BeOne): HF +6% (3M) vs MF -9% (3M) and -43% (12M); ii) IONS: HF +7-8% (3M/6M) vs MF heavy selling in 3-6M Interpretation: HF activity likely tied to event-driven positioning (data, regulatory developments).

6) Rotation Away from "Legacy Biotech Winners" Into Newer Themes

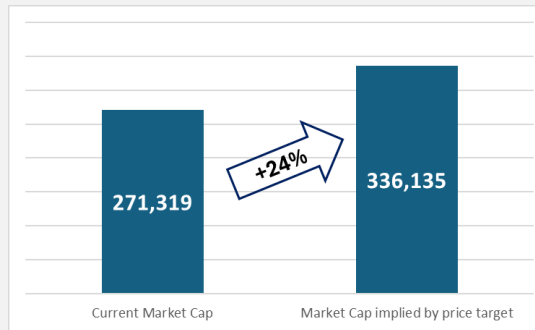

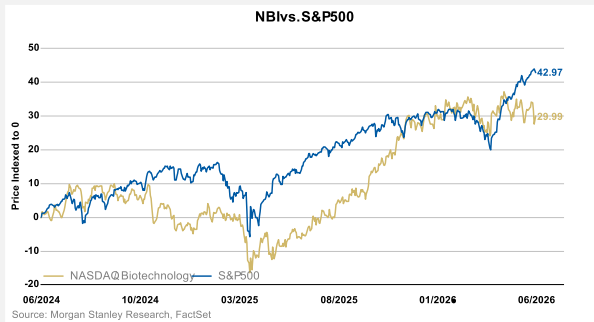

Selling pressure in older winners: i) NBIX: HF negative short-term vs MF positive → divergence; ii) INCY: HF negative 3-6M vs MF steadily positive

Buying concentrated in: New modalities (gene therapy, cell therapy, targeted protein degradation)

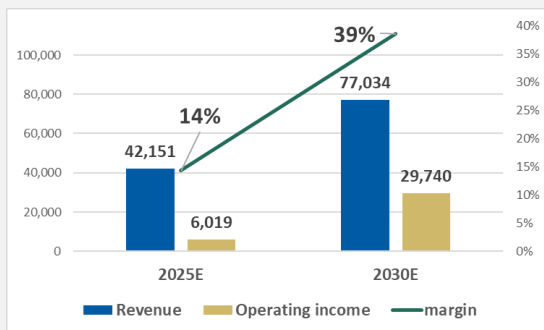

SMID Cap Biotech: Setting Up For a Renaissance

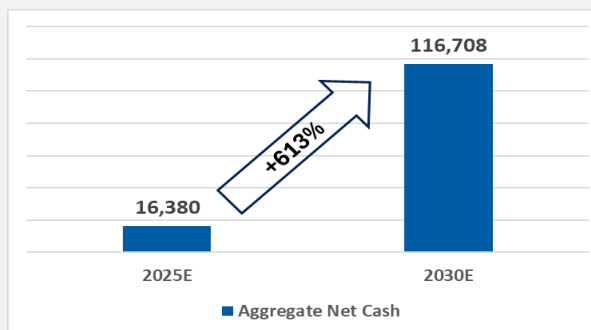

1. Policy Uncertainty = underperformance... 2. ...valuations remain attractive...

3. ...with steep inflection in profitability...

4. & concomitant, underappreciated cash build

Key Points:

- Focus on our 28 Commercial stage SMID Cap Biotech names
- Aggregate large improvement in profitability forecast
- May suggest valuations are conservative
- Revenue/margin growth drives large accumulation of cash on balance sheets
- Opportunity to build pipelines inorganic/organic
- Note that Large Cap Biopharma faces LOE value of ~\$150bn out to 2030

Our 4 Lenses for Commercial SMID Cap Biotech Coverage ('26E-'30E)

1 Lens 1 - Balanced Growers: Lesser dependence on both one product & the pipeline

ALNY, ARQT, BBIO, INSM, NBIX, ONC

2 Lens 2 - One Product Hits: ~90% growth driven by one product that has already launched

ARGX, ASND, CRNX, CYTK, IMCR, LEGN, RYTM, SRPT

3 Lens 3 - Pipeline dependent growers: Growth largely driven by yet-to-be-launched products

ARWR, AXSM, DNLI, EXEL, IONS, MIRM, PTCT, RARE

4 Lens 4 - Slower growers: Lowest growth to 2030 within our commercial stage coverage

ACAD, HALO, INCY, JAZZ

Lens 1 to 4 in order of increasing risk. Within each Lens, listed L to R from highest to lowest revenue growth.

Macroeconomic Factors: Rates and Valuations

The NBI demonstrates an inverse relationship with the 10Y yields and market interest rates. A few factors that we believe have caused this trading dynamic include: 1) discount rate impact, 2) access to cheaper cost of capital, and 3) risk-taking appetite

① Discount Rate Impact

Inverse relationship between rates and index performance/stock valuation is apparent. Forward looking projections on interest rates / treasury yields is on a downward trajectory which implies higher future intrinsic valuations in the sector and better index performance.

② Access To Cheaper Cost of Capital

The April FOMC Meeting resulted in another hold on interest rate cuts, maintaining the Fed policy rate at 3.5-3.75%. Our MS Economy team now looks for two rate cuts in January and March of 2027, bringing the terminal target range for the federal funds rate to 3.0-3.25%.

See our MS Economy Team's additional thoughts [here](#).

③ Risk Taking Appetite

Lower rates often shift investor preference to riskier, speculative assets as safer investment classes will not yield sufficient returns. Investors may reallocate their resources to the clinical stage / pre-commercial companies in a lower interest rate environment. Historically, in a high-rate environment, investor preferences steer towards safer, income generating assets (e.g., commercial stage biotechs with 1+ drugs generating revenue)

Negative EV Screen: Which Biotech Stocks Stand Out?

We screen our covered universe for biotech companies with low-to-negative enterprise value, i.e., companies trading below cash.

8 companies with negative enterprise values with:

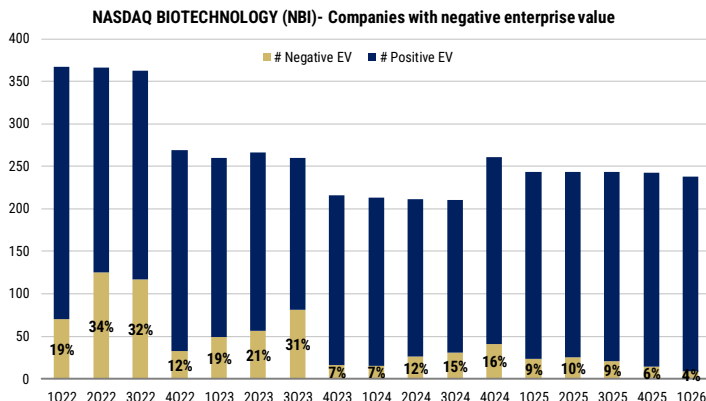

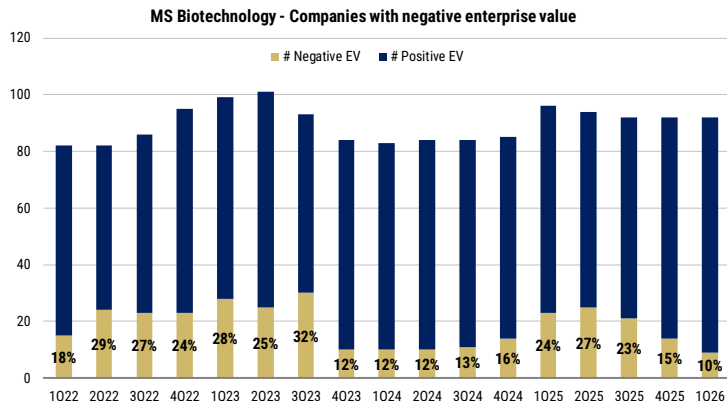

- Total ~\$3.4B in aggregate market value and ~\$5.8B in aggregate cash (last 12 mo)
- Represents a **39.0% discount** vs **20% - 40%** on aggregate cash suggesting these biotechs are now trading near all time low valuations relative to their underlying assets

Of these negative EV companies, these are the ones we see the most **upside** (names that's are **best in class** & **first in class** and have **MS overweight** ratings): **EIKN (Best-in-Class)**

Negative EV Time Series

We screen our covered universe for biotech companies with low-to-negative enterprise value, i.e., companies trading below cash.

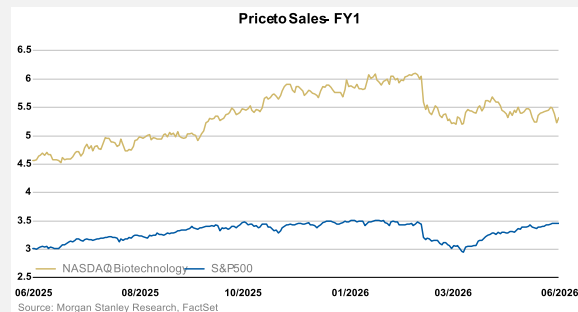

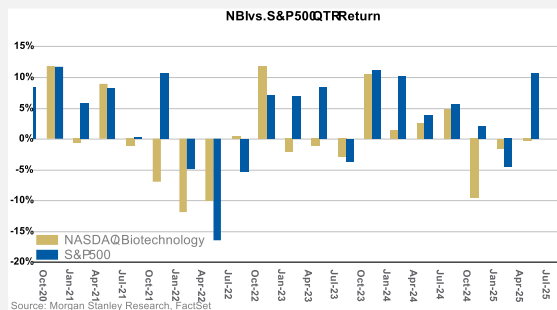

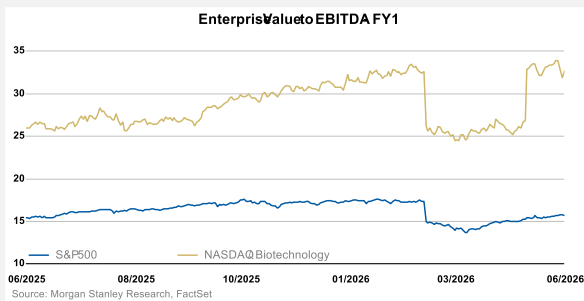

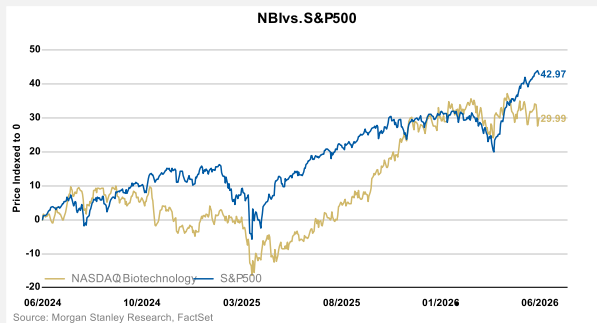

Morgan Stanley SMID Cap Biotech Coverage

- Record number of companies with negative EV in 2Q23 coincided with Fed Funds approaching a peak (see slide 20)
- Another peak in companies with negative EV in 1Q25 as uncertainty in rate & regulatory environment prevailed
- 2Q25:4Q25 trend indicated continued sector performance. Number of SMID Biotech companies trading below cash continues to trend down.

NASDAQ Biotechnology Index (NBI)

- Similar historic cyclical type trends as observed with MS SMID Cap Biotech coverage
- Also a spike in depressed valuations due to FDA regulatory uncertainty in 1Q25
- 2Q25:4Q25 trend indicated continued sector performance. Number of SMID Biotech companies trading below cash continues to trend down, although proportion of positive EV vs. negative EV names noticeably lower vs. MS coverage.

NBI Price Performance and Valuation

Biotech Index recovery – With rates now stable-to-easing following the Fed's 2H25 pivot, discount pressure on long-duration biotech cash flows has meaningfully declined, supporting improved valuations and risk appetite. At the same time, a reacceleration in M&A—driven by large pharma's need to offset patent expirations—has provided an incremental tailwind. The current environment is more selective, with capital and performance increasingly concentrated in later-stage, de-risked assets, supporting a more durable, fundamentals-driven recovery.

Key Takeaways:

- Stock performance post catalyst events across US SMID Cap biotech has been highly variable
- Pipeline data updates have driven large stock moves for some stocks immediately following the catalyst, while others appear to be priced in ahead of the event.
- Regulatory events appear to have sig. acute impact on stocks recently

First In Class 2026 Catalysts

- In recent weeks, we have been seeing increased interest in potential first in class programs.
- Below we have compiled 2026 catalysts (alphabetized by ticker) for potential first in class therapies in our SMid-Cap Biotech coverage.
- These catalysts include programs with novel mechanisms of action or which represent new mechanisms for disease areas of high unmet need.

FDA Approval Tracker: 2019 Similar to 2024 But With Fewer Staff

Methodology:

- Drugs advance through several "phases" of clinical development before they reach the FDA for an approval decision.
- While it is straightforward to track the number of approved drugs by company (i.e., the numerator), it is more challenging to measure the number of drugs a company advances into clinical development (i.e., the denominator).
- We leveraged data available on the clinicaltrials.gov website to count the number of drugs each of our large cap companies advanced into clinical development (2007+)

FDA's Accelerated Approval Pathway: Updates & Implications

Background:

The **FDA's accelerated approval** process allows for earlier approval of drugs that treat **serious conditions and fill an unmet medical need**, based on a **surrogate endpoint** that is reasonably likely to predict clinical benefit.

- Products granted accelerated approval must meet the same statutory standards for safety and effectiveness as those granted traditional approval.
- As a condition of accelerated approval, the FDA generally requires sponsors to conduct additional post-approval confirmatory studies to verify and describe the product's clinical benefit.
- FDA may require, as appropriate, that confirmatory trials be underway prior to approval or within a specific time period after the date of approval for a product granted accelerated approval

Ticker	Company	Asset	Detail
SRPT	Sarepta Therapeutics	SRP-9003	Currently in a PH3 study for LGMD2E/R4 and biomarker data (beta-sarcoglycan protein) are expected in 2Q25. The company plans to file a BLA for accelerated approval in 2025
DYN	Dyne Therapeutics	DYN-101 / DYN-251	(Exon 51 skipping) data from a registrational cohort of the Ph1/2 DELIVER study in DMD are expected late 2025 with regulatory filing for accelerated approval expected in early 2026. DYNE-101 data from the registrational cohort of the Ph1/2 ACHIEVE study in DM1 are expected 1H26 with regulatory filing for accelerated approval also expected in 1H26. We note drug reviews for these products fall under the CDER rather CBER.
KYTX	Kyverna Therapeutics	KYV-101	(CD19 CAR-T) registrational Ph2 data in SPS expected 1H26 with BLA filing for accelerated approval expected in 2026.
RGNX	Regenxbio Inc	RGX-202	RGNX says their DMD gene therapy (RGX-202) should have the accelerated approval pathway open for them but they have not confirmed that they would file a BLA under the accelerated pathway yet. We're still waiting on their pivotal trial which will read out next year.
PTCT	PTC Therapeutics	PTC518	Hopes that PTC518 can pursue accelerated approval, but they would have to help FDA define that pathway in Huntington's and have a Ph2 readout in Q2 that could help with this

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of May 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the

Disclosure section (cont.)

equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

STOCK RATING CATEGORY	COVERAGE UNIVERSE		INVESTMENT BANKING CLIENTS (IBC)			OTHER MATERIAL INVESTMENT SERVICES CLIENTS (MISC)	
	COUNT	% OF TOTAL	COUNT	% OF TOTAL IBC	% OF RATING CATEGORY	COUNT	% OF TOTAL OTHER MISC

Underweight/Sell	551	15%	86	9%	16%	201	12%
TOTAL	3,667		920			1632	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.
