

GLOBAL RATES TRADER

Priced For Surprise

The increase in July hike pricing over the last week has put the Fed in position to deliver the largest non-cut meeting day “surprise” in recent memory. Our economists expect the Fed to keep the policy rate stable, the impact of which we think will hinge heavily on how Chair Warsh frames the decision and path ahead. In particular, we think the (relative) long-end stability and contained inflation risk premia are vulnerable to an on-hold decision that is accompanied by limited guidance on the outlook or reaction function. European front-end rates now meaningfully exceed our central bank forecast, but as long as energy—especially gas—prices head higher, momentum is likely to trump value. In both EU and UK front-ends, Z6Z7 bear steepening is unlikely to sustain—either inflation subsides or volatility will migrate to earlier meeting dates, flattening the front-end. We ultimately think 2s10s curves steepen over coming months, especially in the UK where fiscal risks will likely keep Gilt risk premium elevated. 2y JGB yields pushed higher alongside further JPY currency weakness on reports the BoJ may consider faster hikes, but more durable flattening would likely require more evidence of a tighter monetary and fiscal policy mix.

■ **CPI relief retreats.** The roughly 15% rise in oil since last week’s CPI release has helped to take the market from pricing a hike in July as a remote possibility to a meaningful risk. Our economists’ baseline remains for the Fed to remain on hold; if current pricing holds it would set the stage for what we estimate would be the largest non-cut “surprise” on a meeting day in recent decades regardless of outcome ([Exhibit 1](#)). While [media reports](#) during the last cycle helped steer pricing to the ultimate outcome in the days prior to the decision, a meeting day surprise would nonetheless reflect the [shift away](#) from more proactive guidance. Assuming oil prices remain higher through the meeting, we expect a hold would most likely see hike pricing reshuffle, keeping late-26/early-27 pricing stickier (whereas a hike would likely pull the peak of the front-end forward), but broader behavior will hinge heavily on how the decision is communicated. We think on-hold policy paired with limited explanation of the outlook or reaction function would present risk to belly and long-end longs insofar as it could undo the “credibility” repricing seen following the June FOMC ([Exhibit 2](#)) and reintroduce inflation risk into the forwards. Longer-term forward valuations have

moved to the cheap side of fair in the recent selloff, but are still not so stretched as to argue for correction without a macro catalyst that arrests inflation risk or undermines the perception of growth resilience—both of which we continue to think would exert greater effect on shorter maturities.

Exhibit 1: If current pricing for the July FOMC holds, we estimate it would be the largest non-cut “surprise” in recent decades

Estimated non-cut meeting day “surprise” versus market pricing

- Volatility sticky through the latest energy surge.** While yields reached new conflict-highs amidst the reacceleration in oil prices, implied volatility has so far been comparatively stable through the latest selloff, ticking up only slightly ([Exhibit 3](#)). The first phase of the conflict had seen a sharp increase in vol alongside a repricing of the rates path, which offered beneficial entry points to vol-selling strategies even before oil prices peaked. While vols are starting from a higher level, the lack of premium rebuild so far leaves the overall level of implied volatility at the bottom range of our valuation framework, suggesting little buffer for further shocks. In the near-term, we think returns to vol selling are likely to be counter-directional with energy prices (i.e. better returns hinge on lower energy). As we had argued before (and was visible initially following Warsh’s first FOMC as Chair), greater uncertainty around the Fed’s reaction function should also see volatility migrate in on the tail curve, continuing to skew the curve flatter, though there is near-term risk that a hold next week could boost belly and long-end vol if the market worries about a more dovish tilt to policy.
- Questions ahead for stable swap spreads.** Swap spreads have been by and large anchored around fair value against a backdrop of stable funding conditions, the relatively contained volatility discussed above, and a benign absorption picture for UST so far this year. Assuming status quo balance sheet policy from the Fed next week, the August refunding announcement the following week represents the next key piece of supply news. On the latter, we think there has been little perceived cost to Treasury of leaning into bill supply so far, but heightened front-end uncertainty and already-heavy bill supply over the next few quarters—our estimates imply about

\$1.2-to-\$1.3tn in net bill supply from 3Q26 to 1Q27—present risks, with the tepid reception of Thursday’s 8-week bill auction a recent indication of more cautious front-end demand dynamics. Our baseline remains for stable coupon auction sizes until May 2027—at which point we expect adjustments to be confined to 2s-7s—with Treasury’s “next several quarters” guidance once again a key focus. The relative stability in spreads and broadier measures of Treasury convenience suggest macro risks rather than shifts in the supply/demand balance have been the primary factor behind the yield move, but we think Treasury would likely need to accompany any guidance change with some indication about where on the curve adjustments might come to avoid an adverse market response. We continue to think that 3y spread longs work as a carry expression, with valuations not a headwind, but think it makes sense to manage with a relatively tight stop and would close on meaningful widening.

Exhibit 3: The rise in energy prices has not yet translated into higher vol, or a flatter tail curve

- Push and pull of oil vs trade risk in the CAD front-end.** This week’s renewed focus on trade tensions following the White House’s announcement of a 50% tariff on \$20bn of Canadian goods is likely to stress dovish risks to the outlook for Canadian rates. The 2.5pp increase in the effective tariff rate on Canadian imports – if implemented – would likely create a 0.2pp drag on growth from lower exports. And while implementation remains somewhat uncertain (Polymarket suggests a 69% chance of some tariffs this year), our economists estimate heightened policy uncertainty and lower investment would be worth a further hit of 0.2pp to growth whether the tariffs take effect or not. The BoC had indicated willingness to ease policy in case of renewed trade restrictions; while we do not think this announcement is sufficient to argue for further easing just yet, it makes it unlikely that the BoC would hike back towards the mid-point of their neutral range absent clear evidence of underlying inflation pressures. With 19bp of hikes priced by December and 50bp by April, we think this points to further room for front-end hike premium to decay. In contrast, higher energy prices, and spillovers from a global repricing higher in yields create a tactical headwind for longs (Exhibit 4); we continue to prefer 2s10s CAD steepeners.

Europe

- **Valuation vs momentum in European rates.** European front-end rates remain tied to energy prices, with the re-escalation in the Iran war driving yields higher. Last week's ECB meeting did little to lower yields, with expectations consolidating around a September hike, our base case. But with limited fresh signalling for the near-term rate path, the front-end steepened with Z6Z7 now pricing close to a full hike, in addition to the two further hikes priced to Dec-26. This bear steepening is a familiar dynamic when inflation risk is rising, but volatility of front-meeting pricing remains contained. This could resolve in one of two ways: inflationary pressure subsides, or the speed limit on near-term meetings is raised. So far, it looks like 2y2y inflation is fairly priced alongside the movement in energy prices (Exhibit 5), but the lag in repricing of European rate volatility suggests some upside risk to front-end volatility unless energy risks subside – this is relevant for European sovereign credit which is tracking rates vol rather than the level of core rates. We continue to expect that the EUR swap curve will steepen on lower front-end yields – 1y1y OIS near 3% looks particularly elevated – but resilient economic data and sticky European gas prices are likely to delay relief.

Exhibit 6: Market pricing of BoE path reflecting increasingly gas vs oil prices

Change in the beta of BoE meeting pricing to commodity prices (bp move per 1% move in commodities): 25 June to present vs 26 February to 19 March 2026

Source: Goldman Sachs Global Investment Research, Goldman Sachs FICC and Equities

- **Rising energy prices costing Gilts.** The renewed rise in energy prices has driven Gilt yields and front-end pricing back towards their conflict highs. Like in Europe, inflationary pressure from higher energy prices has increasingly been reflected in 2027 rate pricing, with SFIZ6Z7 now steeper than when the war in Iran began. The latest re-escalation has resulted in two rotations: from Z6 to Z7 and from oil to gas, (Exhibit 6). These moves are consistent with BoE reluctance to hike faster than current market pricing, given Governor Bailey has maintained a comparatively dovish stance in recent communication. Our economists continue to expect the Bank to remain on hold at next week's meeting and through year-end, as activity remains sluggish and underlying inflation dynamics contained so far. However, the cost-of-living focus on Prime Minister Burnham – while not yet resulting in substantial spending commitments – is likely to keep the market focused on

potential fiscal measures should the energy shock worsen. With fiscal headroom a function of government funding costs, rising energy prices already add fiscal pressure that is likely to keep Gilt risk premium elevated. Although the near-term direction of front-end rates will be determined by movements in energy prices, with nearly three hikes priced into 2027 we continue to think the UK 2s10s curve will steepen over a three-month horizon.

Japan

- **Support for a flatter curve dependent on BoJ signaling.** Reports this week that the BoJ is open to raising rates faster than consensus expects—due to upside inflation risks from JPY depreciation—supported modest 5s30s flattening. As macro factors have been the biggest source of volatility in Japanese markets, a more hawkish BoJ could stem some of the cheapening pressure on rates and the currency. We think the extent of any relief likely depends not only on considerations around timing and pace, but also on the readthrough to terminal rate pricing. Simply pulling forward expected hikes may no longer durably curb further curve steepening and 10y underperformance because the market has for a while now viewed a 1.5% terminal rate as insufficient to sustainably curb inflation and thus for now requires further increases in term premium. The government has also grown more attuned to interest cost risks recently, proposing measures last week to encourage JGB inflows from GPIF and NISA accounts. We estimate both could lift demand for JGBs, though most of the impact is more likely to come through signaling and positive feedback loops—such as encouraging demand from other institutional investors—rather than outright purchases. We see room for outperformance in the parts of the yield and spread curves that have been hit hardest by supply-led cheapening, namely 20s and 30s (Exhibit 7). Ultimately, though, we continue to think that a sustainable decline in JGB volatility and support for the belly require support from the macroeconomic backdrop and/or monetary and fiscal policy mix. Our economists do not expect a hike next week, but Governor Ueda's messaging will be key, as will any follow-on commentary from Prime Minister Takaichi or Finance Minister Katayama. A hawkish tone, signaling openness to a higher terminal or short-run neutral rate, could ease concerns about BoJ independence and fiscal dominance risks and support further curve flattening.

Exhibit 7: JGB inflows from NISA or GPIF accounts could support parts of the curve hardest hit by supply factors

Source: Goldman Sachs Global Investment Research, Goldman Sachs FICC and Equities

Exhibit 8: Medium-term forwards have borne the brunt of the recent oil-induced repricing, we expect the front-end to flatten

Source: Goldman Sachs Global Investment Research, Goldman Sachs FICC and Equities

Australia and New Zealand

- **Hawkish risks already priced in NZD, AUD forwards to take relief.** Inflation data for 2Q26 in New Zealand came in hotter than expected, with CPI (yoy) 0.2pp above our economists' and the RBNZ's expectations. Given the RBNZ's prior hawkish pivot, this raises the likelihood of further tightening and our economists now expect an additional hike in December. We think recent communication coupled with the renewed rise in oil prices likely provides a floor under front-end rates for now. However, we continue to think the 120bp of tightening priced throughout the next year is excessive given core inflation remains within the target band and our economists expect labor market slack to ease underlying inflation pressure. Accumulation of data thus should curb hike premium over time, and we continue to expect 2s10s to steepen. In Australia, the 2y1y part has borne the brunt of the recent repricing in oil prices relative to the front-end (Exhibit 8). But while stronger labor market data raises the likelihood of a final RBA hike in August, as our economists expect, the tightening impulse delivered so far has started shifting the distribution around inflation risk, which in turn should allow longer-term forwards to decouple from oil prices. Following the selloff, we see renewed value in longs or front-end flatteners.

Disclosure Appendix

Reg AC

We, George Cole, William Marshall, Simon Freyenet, Isabella Rosenberg, Friedrich Schaper and Loic Mathys, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Contributing Authors: George Cole Goldman Sachs International, William Marshall Goldman Sachs & Co. LLC, Simon Freyenet Goldman Sachs Bank Europe SE - Paris Branch, Isabella Rosenberg Goldman Sachs & Co. LLC, Friedrich Schaper Goldman Sachs & Co. LLC, Loic Mathys Goldman Sachs International.

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Option Specific Disclosures

Price target methodology: Please refer to the analyst's previously published research for methodology and risks associated with equity price targets.

Pricing Disclosure: Option prices and volatility levels in this note are indicative only, and are based on our estimates of recent mid-market levels (unless otherwise noted). All prices and levels exclude transaction costs unless otherwise stated.

General Options Risks – The risks below and any other options risks mentioned in this research report pertain both to specific derivative trade recommendations mentioned and to discussion of general opportunities and advantages of derivative strategies. Unless otherwise noted, options strategies mentioned in this report may be a combination of the strategies below and therefore carry with them the risks of those strategies.

Buying Options – Investors who buy call (put) options risk loss of the entire premium paid if the underlying security finishes below (above) the strike price at expiration. Investors who buy call or put spreads also risk a maximum loss of the premium paid. The maximum gain on a long call or put spread is the difference between the strike prices, less the premium paid.

Selling Options – Investors who sell calls on securities they do not own risk unlimited loss of the security price less the strike price. Investors who sell covered calls (sell calls while owning the underlying security) risk having to deliver the underlying security or pay the difference between the security price and the strike price, depending on whether the option is settled by physical delivery or cash-settled. Investors who sell puts risk loss of the strike price less the premium received for selling the put. Investors who sell put or call spreads risk a maximum loss of the difference between the strikes less the premium received, while their maximum gain is the premium received.

For options settled by physical delivery, the above risks assume the options buyer or seller, buys or sells the resulting securities at the settlement price on expiry.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information

on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
