

Americas Technology: Hardware: Expert Network Series: CPU server demand driven by refresh, agentic AI

We hosted an investor webinar with Jordan Plawner, Founder & Executive AI Strategist at Pacific AI Advisory and Former Global Director of Intel AI Products and Strategy at Intel, on June 26th, 20226 as part of our Expert Network Series to discuss current trends impact the server market.

Bottom line: (1) Agentic AI could drive a 5-6x uplift to the CPU server market, as CPUs are better designed for the sequential tasks & heterogeneous workloads that AI agents execute (v. GPUs designed for massive parallel processing); (2) Significant opportunity for performance and efficiency improvements from refreshing the installed based of legacy servers; (3) Only ~1/2 of enterprise server demand seen at Dell and HPE is currently being fulfilled because of industry supply constraints, driving company-level backlog expansion and creating visibility into future revenue.

Key takeaways

Agentic AI could drive a 5-6x uplift to the CPU server market. To frame the opportunity, Mr. Plawner estimates that on average, AI training workloads currently have a 1:4 ratio of CPUs:GPUs in their systems, which translates to \$1 of CPU spend for every \$50-\$80 of GPU spend. As the market moves towards more diversified inference and agentic workloads, Mr. Plawner sees the ratio of CPUs:GPUs moving towards 1:1 on average over time, which translations to \$1 of CPU spend for every \$6-\$10 of GPU spend. This should create a positive demand tailwind for hardware OEMs including DELL and HPE, who have deep general compute relationships across enterprise customers. CPUs are better designed for sequential tasks & heterogeneous workloads like orchestration (v. GPUs designed for massive parallel processing), which makes them better suited for agentic AI tasks. CPUs also have direct access to DRAM, which makes them more efficient as feeding more data into AI systems, improving their utility.

~2-3 year payback period for enterprises refreshing aging traditional server installed base. In an illustrative example, Mr. Plawner estimates that an enterprise could replace 1,000 older servers with ~350 current generation servers (approximately a ~3:1 densification), driving significant operational expenses, such as an estimated ~\$1 mn/year in lower spend on power. Mr. Plawner noted that the installed base of traditional servers is ~6 years old on average (v. 3-4 year average life historically), as organizations have prioritized IT budget on GPUs & related AI training

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. infrastructure in recent years. Latest generation CPU servers offer significant performance and efficiency improvements as compared the vast majority of the installed base, driven by a ~4x higher core counts and ~2x denser memory/core. For cloud service providers, this densification is important because it addresses issues around power constraints, which is one of the limiting factors of overall compute growth. For enterprise, refreshing installed servers is also prerequisite for running agentic workflows, especially because running agents 24/7 will further accelerate the mean time to failure for servers, which is very costly for enterprises. Mr. Plawner believes that that payback period for enterprises investing in traditional CPU servers as part of an on-premise repatriation strategy may be even faster than 2-3 years because of increasing costs of running workloads

Supply constraints are limiting enterprise server shipments. Mr. Plawner estimates that only ~1/2 of enterprise server demand seen at Dell and HPE is currently being fulfilled and that it will take at least another 18 months for a larger share of this demand to be met (in line with the time it will take for more memory capacity to be brought on line, increasing the supply of DRAM allocated to traditional servers). Robust demand for HBM from the hyperscalers & AI model builders is squeezing DRAM allocations for enterprise servers. Mr. Plawner thinks that even when more memory supply does come line, server prices will remain elevated. CPU and memory suppliers are likely to continue to prioritizing their largest and most strategic customers, including OEMs like DELL and HPE, over the long tail of smaller vendors and manufacturers that are less scaled.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	60%	45%

As of April 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,074 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or

policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
