Transformation generates value-add - Initiate at BUY

Transformation generating value

VNET is one of China's leading carrier-neutral data center operators, serving more than 7,000 enterprise customers through a combination of retail colocation, wholesale hyperscale data centers, cloud services, and enterprise networking. While historically driven by retail IDC services, the company is now undergoing a significant business mix shift toward becoming a hyperscale-focused data center developer benefiting from AI and cloud demand.

Strong bookings, a deep development pipeline, rising utilization, improving margins, and access to capital underpin forecasts for sustained strong growth through at least 2028. Management is targeting a 10GW build out. We assume only half of that build, but this still would represent a transformative increase in scale and earnings power.

Demand has accelerated as AI and cloud customers resume capacity expansion following improved chip availability. VNET has materially outperformed peers in bookings, securing 517MW YTD compared with GDS's 334MW, including a 510MW order from ByteDance. These projects are expected to be delivered between 2H26 and 1H28 and should drive a meaningful acceleration in revenue and EBITDA, particularly from 2027 onward as utilization ramps.

VNET also possesses substantial development optionality. The company has over 1GW of reserved wholesale capacity, primarily in Ulanqab, where construction costs are lower while economics remain attractive. Management is targeting further expansion across Inner Mongolia and key "East Data, West Compute" locations.

Funding appears manageable despite an aggressive RMB10-12bn annual capex program. The successful monetization of mature data centers at 13-14x EV/EBITDA through REIT listing provides an important source of capital and could support a self-reinforcing development model. Assets with a value of RMB6.4bn have been 70% sold down YTD through such channels.

The recent acquisition of a major stake by a CATL affiliate removes a shareholder overhang and strengthens confidence in VNET's strategic direction. While potential operating synergies remain uncertain, CATL's involvement could

IMPORTANT RESEARCH DISCLOSURES AND ANALYST CERTIFICATIONS LOCATED IN APPENDIX 1. Deutsche Bank does and seeks to do business with companies covered in its research reports. Thus, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

enhance financing access, energy-storage expertise, and support future overseas expansion.

Our estimates do not account for the potential value add from the company's development model, yet we still estimate the company's stock to be worth USD12.50 per share based on our DCF estimate, helped by its ramp up. We are also attracted to its wide discount to peer multiples. We therefore initiate with BUY. Key downside risks include: 1) With high growth in both industry supply and demand this is a risk of oversupply and/or demand slowdown, and 2) Execution and funding risks surrounding its plans for a rapid build out.

Company highlights

From retail to wholesale

VNET is a leading carrier-neutral data center service provider in China. It operates one of the largest third-party IDC networks domestically, concentrated around Tier-1 cities, and serves a diversified base of over 7,000 enterprise customers.

The company provides managed hosting services (IDC), which includes colocation, inter-connectivity, and other value-added services, as well as cloud and business VPN services (non-IDC). We summarize its business segments below:

- **Wholesale IDC:** ~40% of 1Q26 net revenues; providing large-scale, customized data center sites for cloud hyperscalers. Introduced in 2019, this business has become the company's **key growth driver**, with revenues increasing 58.1% YoY in 1Q26. Meanwhile for the first time, wholesale surpassed retail in terms of revenues, marking a significant milestone in the company's dual-core growth strategy.
- **Retail IDC:** ~38% of 1Q26 net revenues; retail IDC offers standard cabinet colocation, either dedicated or shared, as well as inter-connectivity and a suite of VAS such as hybrid IT, bare metal services, and firewall management. This segment serves a diverse customer base, from blue-chip enterprises to SMEs across various industries. VNET has maintained a high retention rate, with core IDC business churn rate consistently below 1%.
- **Non-IDC business:** ~22% of 1Q26 net revenues; this segment consists of cloud services and VPN services. Through a long-term strategic partnership in place since 2013, VNET is Microsoft's partner in mainland China for cloud offerings (Azure, Microsoft 365, Dynamics 365, and Power Platform), operating under a revenue-sharing model with monthly settlement and performance-based incentives. The VPN business is offered under brand DYXnet, covering enterprise-grade network solutions like MPLS and SD-WAN, across Asia.

Strong bookings momentum to support revenue acceleration

We believe VNET is entering a notable revenue expansion phase, underpinned by the rapid scaling of wholesale IDC and the stabilization of retail IDC and Non-IDC businesses.

The order trend in the wholesale market has recovered since mid-2025 due to better chip availability, and VNET has so far displayed exceptional bookings momentum, outpacing its major IDC competitors. It secured 199MW new bookings in 2H25 and 517MW YTD, compared with 90MW and 334MW at GDS during the same period.

510MW of YTD bookings is from ByteDance for two data center campuses in the Greater Beijing Area. The delivery is scheduled in three phases: one-third in 2H26, one-third in 1H27, and the remainder in 2H27-1H28. Given ByteDance typically ramps up quite fast, we anticipate these capacities will quickly translate into revenue and EBITDA contributions for VNET.

With that said, the delivery pattern for the next 12 months is back-end loaded. The company guided for 2026 capacity delivery to add 450-500MW, of which over 80% should be in 2H based on our estimates. Coupled with some time for customer move-in and utilization to pick up, we think the revenue growth for 2027 should be better than 2026. Overall, we estimate revenue growth of 18.2% for 2026, in line with the guided range of 15.6%-18.6%, and 19.5%/19.6% for 2027/28.

Land reserves as delivery backup

The company holds 1,056MW wholesale capacity reserves for future development as of 1Q26, mostly concentrated in Ulanqab, of which 697MW is for short-term and 359MW for long-term deployment. We highlight in the later section ([Economics in the west](#)) that the unit capex for data center construction in Ulanqab is ~10% lower than in Tier-1 cities, while development yield remains similar; and Ulanqab is favored by hyperscalers for lower utility and rental costs and attractive latency.

Management has confirmed that these reserves were either obtained before the "window guidance" came into practice or have already secured power quotas, which allows them to fast-track delivery by commencing construction immediately upon receiving client orders.

Looking ahead, the company plans to further increase its reserves in Inner Mongolia, the Yangtze River Delta, and two or three key nodes along the "East Data, West Compute" route, as part of its long-term expansion plan. Land acquisition accounts for only low-single-digit percentages of the unit capex, so funding the land bank is manageable.

Favorable mix shift to drive margin expansion

The wholesale business carries an adj.EBITDA margin of 45-50%, compared to 30-35% margin of the retail IDC business (which is lower due to lower utilization and connectivity that is largely passed through), and low-teens margin of the non-IDC segment. As the wholesale segment's share of revenue grows, we expect it to provide a significant tailwind for the company's overall profitability.

While retail data centers command higher rental rates in the market, they typically require a longer period (3-4 years) to reach a mature-level utilization of ~70%. In contrast, wholesale projects, anchored by large-scale orders from clients, usually achieve a higher utilization rate of over 90% within 6-12 months. In 1Q26, VNET's mature wholesale capacity reached a utilization rate of 93.8%, compared with 68.5% for retail.

We therefore estimate VNET's adj.EBITDA margin to reach 32.3%/34.9%/36.3% in 2026/27/28, driven by the higher mix of wholesale and its average utilization ticking up as projects mature. Our estimates for wholesale utilization are to reach 71.6%/73.1%/74.6% for the same period, while retail remains largely stable at 64%.

Potential upside from overseas expansion

The company has a target to grow to 10GW in capacity under management over 10 years. This target includes spun-off projects under REITs, but we assume a slower build, with it reaching ~5GW in that time frame. Some of that growth will likely come from overseas expansion, with South-east Asia being a target for first step (esp. Thailand and Malaysia), which could serve as potential upside to our estimates.

Regardless, we have doubts whether demand and economics will hold up enough to allow the company to basically add its current capacity every year. But if it gets to 5GW, that will still represent a major transformation.

Figure 18: VNET's hyperscale 2.0 framework for future development

Source : VNET 2Q25 results presentation

Diversified capital access to fund capex

VNET's capital-intensive growth is supported by an increasingly diversified capital structure. The company has guided 2026 capex at RMB10-12bn, for adding 450-500MW capacity.

Funding sources include:

- **Project debt.** Debt remains the primary source, with 70-80% LTV on project level (vs. 60% at GDS). The corresponding interest rates are mainly floating at LPR (3%) minus several dozen basis points, as per the company.
- **REITs.** VNET has successfully established an efficient capital recycling model by monetizing its data center assets through REITs. This strategy provides significant cash proceeds for reinvestment. The company so far has launched three private REITs and has another C-REIT (backed by an 18MW project) awaiting approval. Going forward, the company expects to focus more on private REITs due to the structure's better flexibility. The details of the three listed private REITs are as follows.
 - In November 2025, VNET launched a real estate green ABS with a total offering size of RMB0.86bn, utilizing Tier-1 retail IDCs as the underlying assets. The deal was valued at ~13x EV/EBITDA, and VNET retained a 7% stake (de-consolidated).
 - In March 2026, the company listed two additional private REIT projects on the Shanghai Stock Exchange, backed by wholesale IDC assets in Ulanqab and Taicang. These had a combined offering

size of RMB6.4bn and were valued at 13x-14x EV/EBITDA. VNET retained a 30% stake in these projects (still consolidated) and expects to realize over **RMB2bn cash proceeds** (with the balance representing debt in the REIT).

- **Operating cash flow** of ~RMB2bn per year and **cash** on hand (incl. short-term investments) of RMB6.6bn as of Dec 2025.
- **Convertible notes.** The company had outstanding CBs with principal amount of RMB5.1bn. This includes the 2027CB (RMB2.2bn, conversion price at US\$11) and the 2030CB (RMB2.9bn, 2.5% coupon rate, conversion price at US\$13.75), which provides long-term capital with cash or equity settlement options.

We think the key is asset monetizations. So long as the market has appetite to buy its mature data centers at double-digit EV/EBITDA multiples, it will have a solid funding channel. Each RMB2bn raised would fund a 100MW build, so allowing for project financing as well, there seems a strong opportunity to build a development model. We are not factoring such a model into our assumptions.

Figure 20: Net debt & net debt/adj.EBITDA

Source : Company data, Deutsche Bank estimates

Strategic investor change and synergies

The company announced a major shareholder change on May 13th, 2026. The CATL affiliate PJ Millennium Partnership has agreed to purchase 38.1% of the Class A ordinary shares from Shandong Hi-Speed Holdings Group (SDHG) at US\$8.69 per ADS. The transaction is expected to close in 4Q26, pending certain conditions, including approval by the shareholders of SDHG.

The market reacted positively towards the release, with shares bidding up 25% in the subsequent trading day. This removes the overhang of the largest shareholder's sell-down and introduces potential for better synergies. Management has identified several key areas for collaboration, including energy-storage technology, supply chain resources, and global footprint. We do not see why CATL would provide exclusive terms to a single IDC operator, so are skeptical about synergies, but we do take a lot of comfort in future direction that can come from having one of the world's leading companies as its major shareholder.

The company expects that by leveraging CATL's supply chain and expertise in

energy storage, particularly its HVDC technology, it can enhance its capabilities in green and high-performance data center construction. CATL's global presence should also complement VNET's overseas expansion strategy, particularly in securing resources and facilitating funding. This strategic alignment reinforces VNET's leading position and its ability to capture the structural opportunities arising from AI demand.

Figure 21: Shareholder structure as of Mar 31, 2026

Industry trends

Demand: cloud & AI capex fueling the up-cycle

China's data center market has rebounded since 2024, with revenue growth accelerating and capacity utilization ticking up. This upward cycle is primarily driven by a significant expansion in cloud capex to support AI development. Beyond traditional hyperscalers, we are now seeing AI model companies emerging as a new class of tenant, and committing to large-scale standalone projects.

These AI deployments typically require 1) short lead times - with rapid delivery (6-9mths) from contract signing, faster move-in (6mths), and faster second phase initiations (6mths); 2) longer contract duration (~10yrs); 3) massive scale (50MW+) with high power density and low PUE, usually utilizing green energy and liquid cooling.

We detail three key customer categories and their capex plan below.

- **Hyperscalers.** The same companies remain the major source of demand for new capacity, and thus their capex plans serve as a leading indicator for the IDC industry. The consensus for the combined capex of the BATs (Baidu, Alibaba, and Tencent) is RMB263bn in 2026 and RMB276bn in 2027. While ByteDance's budget alone may reach RMB476bn/RMB680bn in 2026/27, according to Bloomberg. Compared with their US peers, the BAT's capex to operating cash flow ratio is still relatively healthy.
- **Telcos.** While cloud and data center businesses have been a focus of telcos' growth strategies, their capex on computing infrastructure is markedly lower than hyperscalers' and largely remained stable over the past few years, although they may lead a government led build out.
- **Government.** The government is reported by Bloomberg in early June for a RMB2tn investment push in AI data centers over the next five years, though there hasn't been any official announcement yet. We have estimated that this could lead to a more than doubling of industry capacity and potential oversupply issues if it fully materializes (see our [previous note here](#)).

Supply: market, pricing, and competition

MIIT's figures indicate a clear ramp up of data center supply nationwide in 2025, increasing 53% to 13.72m standard racks or 34GW. If we factor in the RMB2tn investment from government, plus 3-5GW per year from the private sector, then we estimate the industry will grow at ~21% CAGR till 2030 in terms of power capacity, and substantially more rapidly in terms of computing power given improvements in processing capabilities.

The supply-side landscape is highly fragmented. Market participants can be broadly segmented into three main categories: state-owned telecom carriers, third-party IDC providers, and in-house builds by enterprises themselves.

For hyperscalers, while some like Baidu, Alibaba, and Tencent, do build and operate their own data centers, they still rely heavily on third-party players for the majority of their capacity needs. The project management complexity, capital intensity, and regulatory hurdles associated with self-builds make renting space a more efficient option for them.

Telecom carriers

We estimate that the three telcos (China Telecom, China Mobile, and China Unicom) collectively account for 35-40% of China's data center capacity in service in 2025. While this represents a decline from around 50% five years ago, their massive scale and nationwide presence continue to render them the price leader. Given their bundling and relatively aggressive pricing strategies in 1H this year, we think a significant and across-the-board price hike is not likely to happen in the near term.

Historically, the three telcos dominated the market by capitalizing on their extensive connectivity resources and customer relationships, particularly with government and SOEs. The market has since transitioned to a hybrid structure where services

are jointly provided by both telcos and third-party IDC operators.

The telcos skew their portfolio to remote areas (e.g. Guiyang, Ningxia, etc.) versus third-party operators, as part of a national layout. In Tier-1 cities, even telcos rent from third-party players for better economic efficiency.

Third-party IDC providers

This includes VNET (DBe: 3% market share in 2025) and its most direct competitors, such as GDS, Chindata, Range Intelligence, etc. These specialists have successfully captured market share by offering better flexibility and customization, notably with market-driven arrangements and carrier-neutral value proposition that frees clients from network lock-in.

While there are some scale economies, it is a commoditized business, as seen by the lack of profitability across operators. Most hyperscale customers strategically employ a multi-vendor architecture ("white list") to diversify supply chain risk and to foster a competitive bidding environment. Comparative advantage and profitability hinges on their asset portfolio, customer mix, operational excellence, and capital access, especially in the absence of market rates inflation. Gaining an edge is achieved by acquiring quality land and power allocations during market downturns.

Policy: national layout and controls

Since the "East Data, West Compute" project was launched four years ago, China's data center market has gradually moved west. The project outlined "eight hubs and ten clusters" to channel more computing resources from the developed east to resource-rich west. It was reinforced in the 15th Five Year Plan, with a nationally integrated computing network as a focus. According to the MIIT, national hubs hosted 72.6% of the country's data center capacity as of mid-2025, and accounted for 80% of the incremental "computility" added during the year.

Meanwhile, the government has been tightening supply in the east, especially in higher-tier markets. Since 2023, a series of directives have been issued, explicitly prohibiting the new build of large-scale data centers (over 7.5MW/3k racks) outside national hubs. The NDRC later enforced this with a stringent "window guidance" pre-approval mechanism for land use and power quotas, which has become the primary gatekeeper for new development. Projects that fail to clear it are effectively blocked from all subsequent development steps.

Based on our talks with VNET's IR team, the approval rate for the first two batches of applications this year remains low (at around 10%). Operator's track record, order backlog, project PUE design, and use of green power are the priorities for selection.

In our view, these regulatory dynamics not only point to the west as the direction for IDC expansion, but at the same time creates a clear advantage for established incumbents who have already secured land banks and power quotas in Tier-1 & satellite areas as well as the strategically important western hubs.

Figure 29: All large DC builds are included for "window guidance" approval

Project scale	Definitions	Pre-approval needed?
Large	1. Number of racks $\geq 3,000$ 2. Power capacity $\geq 7.5\text{MW}$ 3. Server procurement $\geq \text{RMB } 1\text{bn}$	Yes
Medium	1. Number of racks: 1,000 - 3,000 2. Power capacity: 2.5 - 7.5MW 3. Server procurement: RMB 300mn - 1 bn	Only needed for projects with the participation of local governments or SOEs
Small	1. Number of racks $< 1,000$ 2. Power capacity $< 2.5\text{MW}$ 3. Server procurement $< \text{RMB } 300\text{mn}$	Governments & SOEs are not permitted to participate

Figure 30: China's recent policies on data center and computing infrastructure

Date	Policies	Regulator	Key goals & measures
Mar-26	Outline of the 15th Five-Year Plan (2026-30) "十五五"规划纲要	CPC Central Committee	Deepen "EDWC" project and enhance national computing power network. Coordinate the layout and orderly construction of computing infra, accelerate buildouts in national hubs with explorations into mega-scale clusters . Meeting computing demand through various methods, incl. govt procurement and market-driven leasing
May-25	The action plan for computing power interconnection 算力互联互通行动计划	MIIT	1) By 2026, a) establish identification and standards for computing power interconnection, b) construct a three-tiered (national/regional/industry) computing power interconnection platform , c) achieve interconnection of public computing power from leading enterprises nationwide 2) By 2028, realize standardized interconnection of public computing power , gradually forming a computing power internet with intelligent perception, real-time discovery, and on-demand access
Dec-24	Guidelines for national data infrastructure construction 国家数据基础设施建设指引	NDRC, NDA, MIIT	Construct a national computing power network orchestrating platform; promote 400G/800G OTN between national hubs and access locations; guide telcos to further integrate computing and network resources
Jul-24	Special action plan for green and low-carbon development of data centers 数据中心绿色低碳发展专项行动计划	MIIT, NDA, NDRC, NEA	1) By 2025, DCs' overall utilization ≥60%, PUE<1.5; Hyperscale new builds PUE<1.25 ; DCs in national hubs PUE ≤1.2 2) By 2030, reaching international leading level in electricity utilization, unit computing power efficiency, and carbon efficiency
Dec-23	Implementation opinions on advancing the "east data, west computing" project to speed up the build of national computing power network 深入实施"东数西算"工程, 加快构建全国一体化算力网的实施意见	NDRC, NDA, MIIT, Office of the Central Cyberspace Affairs Commission, NEA	Stipulate that no new large DCs shall be built outside national hubs in principle and form a preliminary comprehensive computing infra system by 2025: 1) >60% of computing power new adds in national hubs , with utilization much higher than national average 2) >80% of new adds in national hubs using renewable energy 3) Pilot latency circle of "1-5-20ms" (cities/regions/national hubs) 4) Cheaper and more accessible computing power 5) Significantly reduced network transmission costs among national hubs
Oct-23	Action plan for the high-quality development of computing infrastructure 算力基础设施高质量发展行动计划	MIIT, Office of the Central Cyberspace Affairs Commission, PBOC, SASAC, etc.	2025 Targets: 1) Total computing power >300EFLOPS, intelligent share ≥ 35% 2) OTN coverage ≥80%, latency among national hubs ≤1.5x theoretical value, >40% backbone and metropolitan area network supports IPv6 and SRv6 3) Storage capacity >1800EB, advanced share >30% 4) Increasing adoption in key industries
Feb-22	"East data, west computing" "东数西算"	NDRC, Office of the Central Cyberspace Affairs Commission, MIIT, NEA, etc.	To establish eight national computing hubs and ten clusters to channel more computing resources from the country's eastern regions to its less developed yet resource-rich western areas

Economics in the west

Aside from some remote western nodes serving as training centers, there is also a trend for inference demand to spill over from Tier-1 cities to satellite areas (e.g., Kunshan/Changshu in Jiangsu and Langfang/Huailai in Hebei) and subsequently even to some closer western clusters (e.g., Ulanqab/Horinger in Inner Mongolia).

Based on our channel checks, most current inference orders in the Northwest are gravitating towards Inner Mongolia and Ningxia, driven by cheaper land and utility costs, and reduced operating expenses due to cold weather and lower PUE. Latency, which is critical for inference, is favorable particularly in Ulanqab and Horinger, with only 5ms RTT to Beijing. This is sufficient for most inference scenarios including 2C applications, given many are not yet revenue-generating. However, as more latency-sensitive scenarios emerge and 2C monetization begins, we expect more deployments to return to areas surrounding tier-1 cities.

Figure 31: Eight hubs and ten clusters under "EDWC"

	Eight hubs	Ten clusters	Latency (ms)*	Computility**	% of total
Eastern	Beijing-Tianjin-Hebei	Zhangjiakou	<3	256	16.1%
	Yangtze River Delta	Delta pilot	<3	n.a.	
		Wuhu	<5	35	2.2%

Source : Communications Weekly, Deutsche Bank

We have examined the economics in different tier markets, including Tier-1 (Beijing), satellite (Langfang), and closer-western (Ulanqab), and modeled their corresponding unit capex and development yield (Figure 32 & Figure 33). We note that while unit capex in Ulanqab is around 10% lower than in Beijing, the development yield is very similar across these cities at 10-11%.

Power is a major cost for hyperscaler clients, and the electricity price (~RMB0.3/kWh) in Ulanqab is considerably lower than that in Langfang and Beijing (RMB0.5/kWh & RMB1.0/kWh). This, coupled with lower rental costs, and a colder location, makes Ulanqab attractive as a site for AIDCs.

Key market assumptions incorporated in our model include:

- RMB20m/MW unit capex on average, with land and plant costs representing roughly 30%, and the rest mainly covering diesel generator, UPS, cooling, etc.
- Rental price in Ulanqab at RMB260-280/kW/mth, compared with over RMB 300/kW/mth in Beijing.

Valuation and risks

We use DCF model for valuation, which in our view is the most appropriate method as it effectively captures the long-term growth and profitability of the company, and aligns with our methodology for the rest of our coverage. We also cross-check the implied multiples with peers and the company's own trading history.

DCF

The DCF-based one-year forward target price is US\$12.5, implying a 2027 EV/adj.EBITDA of 11.3x. Our DCF assumptions are shown below.

- **WACC:** We adopt a WACC of 7.8%, derived with a risk-free rate of 1.8% (to reflect China's 10yr govt bond yield), beta 1.25x, a market risk premium 6%, after-tax cost of debt 3.2%, and long-term gearing 25%.
- **Terminal growth:** We use -0.7%, which is calculated through a formula that accounts for inflation (RFR less 1.5%), and productivity led decay (-1.0%).

Figure 34: DCF valuation

DCF	2026E	2027E	2028E	2029E	2030E	2031E	2032E	2033E	2034E	2035E

Multiples and comps

VNET is currently trading at 8.6x 12m-fwd EV/adj.EBITDA, slightly above its average of 8.2x since 2020, but well below recent peaks at 14.6x. On a relative basis, it trades at a significant discount to both domestics peers (7.7x vs 13.5x 2027 EV/adj.EBITDA median) and global peers (20.6x median).

Key risks

- **Demand-supply pattern shift.** Our thesis of growth and margin expansion at VNET is based on strong demand from hyperscalers and a tightening effective supply of high-quality data centers in core regions. Any significant slowdown in AI demand, a major economic downturn affecting enterprise IT spending, or an overbuild of industry capacity could lead to softer revenue momentum, increased pricing pressure and lower utilization rates.
- **Regulations and geopolitics.** China's regulation on data centers is getting increasingly stringent, particularly concerning land and power approvals. Any major changes to these could impact VNET's competitive advantage, which is partly based on its strategic reserves portfolio. Meanwhile, heightened trade tension and restrictions on technology exports could disrupt the supply for hyperscaler clients, potentially dampening demand for AIDC resources.
- **Rising funding costs or inability to fund.** VNET's growth is largely capex driven, and it has substantial debt on floating basis. Although the company has diversified its financing channels through debt, REITs, convertible bonds, etc., a sustained rise in interest rates would increase borrowing costs and pressure interest coverage ratios. Any difficulty in raising additional funds could force the company to modify or delay its growth plans.
- **Technology upgrades:** AI is still in an early stage, and the AI tech stack will therefore change over time. When AI companies adopt a refresh cycle, that may lead to data center requirements changing, devaluing existing space.
- **Execution risk.** Delays in securing land and power resources, or obtaining necessary government approvals could hinder VNET's ability to meet customer demand. Also, worse-than-expected operations on contract wins, project delivery, or customer move-ins should lead to a downward estimate revision.
- **VIE structure.** The listed entity for VNET's ADRs is a Cayman Islands holding company, which controls the underlying Chinese operating entities through contractual arrangements rather than direct equity ownership. These contracts have not been tested in a PRC court, and there is a risk that PRC authorities could deem the structure non-compliant with local laws.

Equity rating dispersion and banking relationships

Equity Rating and Dispersion Key

The Equity Rating Dispersion Chart depicts the following:

The proportion of recommendations that are rated "buy", "sell" and "hold" over the previous 12 months. This is shown for securities issued in the stated region e.g. "Europe Universe". See rating definitions below. This is represented by the "Companies Covered" bars in the chart. The percentage value displayed above the bar is the proportion as a percentage. E.g. 50% above the "buy" / "Companies Covered" bar means that 50% of DB's equity research covered companies over the past 12 months have a "buy" rating.

Next to each of the three respective bars showing the proportion of "buy", "sell" and "hold" recommendations we provide two additional bars to show:

- The proportion of "buy", "sell" or "hold" recommendations where Deutsche Bank and or/Affiliates provided MIFID Investment or Ancillary Services in the past 12 months. This is represented in the "MIFID Investment and Ancillary Services" bar. The percentage value displayed above the bar shows the proportion of Companies Covered with the given rating where DB has also provided MIFID Investment and Ancillary Services in the past 12 months. E.g. 50% above the "Cos. w/ MIFID Investment and Ancillary Services" bar means 50% of the Companies Covered with the rating stated have also received MIFID Investment and Ancillary Services from DB.

- The proportion of "buy" (or "sell" or "hold") recommendations where Deutsche Bank and or/Affiliates has provided Investment Banking services in the past 12 months for which it has received compensation. The percentage value displayed above the bar shows the proportion of Companies Covered with the stated rating where DB has also provided Investment Banking services in the past 12 months. E.g. 50% above the "Cos. w/ Investment Banking relationship" bar means 50% of the Companies Covered with the rating stated also have an Investment Banking Relationship with DB.

Buy: Based on a current 12- month view of TSR, we recommend that investors buy the stock.

Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

TSR = Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield

Newly issued research recommendations and target prices supersede previously published research.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (<https://research.db.com/Research/>), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (<https://research.db.com/Research/>) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options', at <https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document>. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at <https://research.db.com/Research/> on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA and SIPC. Analysts located outside of the United States are employed by non-US affiliates and are not registered/qualified as research analysts with FINRA.

European Economic Area (exc. United Kingdom): Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at 21 Moorfields, London EC2Y 9DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong SAR: Distributed by Deutsche Bank AG, Hong Kong Branch except for any research content relating to futures contracts within the meaning of the Hong Kong Securities and Futures Ordinance Cap. 571. Research reports on such futures contracts are not intended for access by persons who are located, incorporated, constituted or resident in Hong Kong. The author(s) of a research report, and the entities for which they act and/or are affiliated with, may not be licensed to carry on regulated activities in Hong Kong and, if not licensed, do not hold themselves out as being able to do so. The provisions set out above in the 'Additional Information' section shall apply to the fullest extent permissible by local laws and regulations, including without limitation the Code of Conduct for Persons Licensed or Registered with the Securities and Futures Commission. This report is intended for distribution only to 'professional investors' as defined in Part 1 of Schedule of the SFO. This document must not be acted or relied on by persons who are not professional investors. Any investment or investment activity to which this document relates is only available to professional investors and will be engaged only with professional investors.

India: Prepared by Deutsche Equities India Private Limited (DEIPL) having CIN: U65990MH2002PTC137431 and registered office at 14th Floor, The Capital, C-70, G Block, Bandra Kurla Complex, Mumbai (India) 400051. Tel: + 91 22 7180 4444. It is registered by the Securities and Exchange Board of India (SEBI) as a Stock broker bearing registration no.: INZ000252437; Merchant Banker bearing SEBI Registration no.: INM000010833 and Research Analyst bearing SEBI Registration no.: INH000001741. DEIPL's Compliance / Grievance officer is Ms. Rashmi Poddar (Tel: +91 22 7180 4929 email ID: complaints.deipl@db.com). Registration granted by SEBI and certification from NISM in no way guarantee performance of DEIPL or provide any assurance of returns to investors. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: <https://www.db.com/ir/en/annual-reports.htm>. For latest India research audit report, refer https://country.db.com/india/deutsche-equities-india/index?language_id=1.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

Singapore: This report is issued by Deutsche Bank AG, Singapore Branch (One Raffles Quay #18-00 South Tower Singapore 048583, 65 6423 8001), which may be contacted in respect of any matters arising from, or in connection with, this report. Australia and New Zealand: This research is intended only for 'wholesale clients' within the meaning of the Australian Corporations Act and New Zealand Financial Advisors Act, respectively. Please refer to Australia-specific research disclosures

and related information at https://www.dbresearch.com/PROD/RPS_EN-PROD/PROD0000000000521304.xhtml . Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG. It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
